Publisher's Note

The Publisher is delighted to announce the “Most Cited Paper Award” for *Computer Aided Geometric Design*. With the introduction of our most cited paper award, we are offering an alternative to committee selected “best papers”. The only objective and transparent metric, which is highly correlated with the quality of a paper, is the number of citations. We hope that the design of this most cited paper award will assure fairness and equal opportunity for all authors published in the journal. It is our hope that this award will stimulate the best minds to release

their best work. Papers for this distinction are determined solely based on the highest number of cites received for all journal articles published between the years 2004–2006 (data culled from SCOPUS reports (www.scopus.com) created on January 11, 2007). The winning paper is Biswas, A., Shapiro, V., Tsukanov, I., 2004. Heterogeneous material modeling with distance fields. *Computer Aided Geometric Design* 21 (3), 215–242.

We congratulate Drs. Biswas, Shapiro, and Tsukanov for accomplishing this great achievement.

Arpan Biswas is currently a PhD student in the Department of Mechanical Engineering, University of Wisconsin–Madison. He received his MS in Mechanical Engineering from the Indian Institute of Science, Bangalore, in 1999, and MS in Computer Science from the University of Wisconsin–Madison, in 2003. His research interests include geometric and physical modeling for computer aided design, product modeling, and computer graphics.

Vadim Shapiro is a Professor of Mechanical Engineering and Computer Sciences at the University of Wisconsin–Madison, where he has been on faculty since 1994. Prior to that, he was a senior member of research staff at the General Motors R&D Center in Warren, MI, USA. He graduated from New York University with Bachelor degrees in Computer Science and Mathematics, obtained MS in Computer Science from the University of California, Los Angeles, and holds MS and PhD degrees in Mechanical Engineering from Cornell University. His interests span geometric, topological, and physical modeling, computer-aided design, analysis, and simulation of engineering systems.

Igor Tsukanov is an Associate Scientist in the Department of Mechanical Engineering at the University

of Wisconsin–Madison. He received his MS/BS degree in Aerospace Engineering from the Ukrainian National Aerospace University ‘Kharkov Aviation Institute’ in 1994, and PhD degree in Physics and Mathematics from the Institute for Problems in Machinery of the Ukrainian National Academy of Sciences in 1997. His research interests include generalized finite element and meshfree engineering analysis methods as well as development of computer systems and tools for automated engineering analysis.
