Elsevier has agreed to sponsor any articles accepted for publication that report the initial experimental results from CERN's LHC project.

Initial experimental results submitted to Physics Letters B and Nuclear Physics B by the LHC experiments will be made available through Elsevier's sponsored access option at no cost to the experiments. This will ensure that these papers are open to all potential readers with no subscription or other payments required. In this area of high energy physics, Elsevier recognizes that the experimental papers from the LHC are the first results of one of the world's largest scientific experiments, a result of a global cooperation by a large community.

On the occasion of these ground-breaking first results, Elsevier has chosen to meet the costs of sponsored access itself because of the scale of the effort and to reflect our long-standing involvement in the field by sharing the experimental results through accredited, peer-reviewed journals. Elsevier is proud to support these unique early collaborative efforts of the high energy physics community.
