

List of Top Reviewers - 2008

Peer review is the core process of editing papers in the Journal of Structural Geology we realise how much we depend on the expertise, goodwill and patience of our reviewers. As a token of our appreciation, we publish a list of top reviewers every year, and the Editorial Team of the Journal of Structural Geology is glad to announce the list of JSG Top Reviewers 2008.

This year we have selected 10 names based on statistics and the opinions of all editors. These reviewers have contributed more than the usual in high quality reviewing and have also significantly helped the Journal by submitting timely, high quality review reports and, as a consequence, reduced the average time of processing of manuscripts - a permanent challenge for any scientific journal. The Top 10 Reviewers are listed below in alphabetical order, and we would like to give all a very special thanks for their efforts and willingness.

As editors of the Journal, we would like to thank all of you who review manuscripts for the JSG, a task which is certainly crucial for the scientific development in our field. We know well how difficult, thankless and time consuming this essential task is, and we greatly appreciated the efforts of all our reviewers.

Borradaile, G.
Bouchez, J.-L.
De Paor, D.
Hrouda, F.
Laubach, S.
Lisle, R.
Marques, F.
Mulchrone, K.
Peacock, D.
Woodward, N.

Richard Lisle

Although cannot rank the reviewers individually, some stand out by the excellence and speediness of their work. The editors decided to name one TOP REVIEWER 2008, a special mention that goes this year to Richard Lisle, a colleague who has made a permanent, tireless, outstanding contribution in high quality reviewing to JSG. Richard was chosen unanimously by all editors as our TOP REVIEWER 2008, and we all congratulate him and thank him for his great work over many years. Throughout the years Richard has had a major contribution in keeping the high quality scientific standards of the Journal of Structural Geology, with his always incisive, absolutely fair reviews in the field of strain analysis and others topics.

Being a past JSG editor, Richard reviews, apart from fully dissecting the scientific content of any study also address all the editorial aspects of the manuscript, and his comments and suggestions always lead to a final product that fits better into the Journal profile, with an increased impact on our international audience. We would like to give Richard our warm congratulations, and we hope to enjoy his outstanding collaboration for many more years.
