DESCRIPTION

The Ocular Surface, a quarterly, a peer-reviewed journal, is an authoritative resource that integrates and interprets major findings in diverse fields related to the **ocular surface**, including **ophthalmology, optometry, genetics, molecular biology, pharmacology, immunology, infectious disease, and epidemiology**. Its critical review articles cover the most current knowledge on medical and surgical management of ocular surface pathology, new understandings of ocular surface physiology, the meaning of recent discoveries on how the ocular surface responds to injury and disease, and updates on drug and device development. The journal also publishes select original research reports and articles describing cutting-edge techniques and technology in the field.

Benefits to authors

We also provide many author benefits, such as free PDFs, a liberal copyright policy, special discounts on Elsevier publications and much more. Please click here for more information on our [author services](#).

Please see our [Guide for Authors](#) for information on article submission. If you require any further information or help, please visit our support pages: <http://support.elsevier.com>

EDITORIAL BOARD

Editor-in-Chief

Gary N. Foulks, MD, FACS, Emeritus Professor, Ophthalmology, University of Louisville, Louisville, KY

Founding Editor

Michael A. Lemp, MD, Clinical Professor, Ophthalmology, Georgetown and George Washington Universities, Washington, DC

Section Editors

Laboratory Science

James V. Jester, PhD, Professor of Ophthalmology, University of California at Irvine, Irvine, CA

Clinical Science

J. Daniel Nelson, MD, FACS, Professor, Department of Ophthalmology, University of Minnesota, Minneapolis, MN

Clinical Practice

John E. Sutphin, Jr., MD, Professor and Chair, Department of Ophthalmology, University of Kansas Medical Center, Kansas City, KS

Innovative Techniques and Technology

Gary Foulks, MD, FACS, Emeritus Professor of Ophthalmology, University of Louisville, Louisville, KY

Source in Time

Juan Murube, MD, PhD, Professor of Ophthalmology, University of Alcalá, Madrid, Spain

Pipeline

Gary D. Novack, PhD, President, PharmaLogic Development, Inc. San Rafael, CA

Managing Editor

Susan Erickson, Brookline, MA

Editorial Board

Pablo Argueso, PhD, Assistant Professor of Ophthalmology, Harvard Medical School and Associate Scientist, Schepens Eye Research Institute, Massachusetts Eye and Ear, Boston, MA

Reiko Arita, MD, PhD, Vice Director and Chairman, Department of Ophthalmology, Itoh Clinic, Saitama, Japan

Penny A. Asbell, MD, Professor of Ophthalmology, Mount Sinai Medical Center, New York, NY

Stefano Barabino, MD, PhD, Clinica Oculistica, University of Genoa, Genoa, Italy

Christophe Baudouin, MD, PhD, Professor and Director, Ophthalmology, Quinze-Vingts Hospital, University Paris, Paris, France

Carolyn G. Begley, OD, MS, Professor, School of Ophthalmology, Indiana University, Bloomington, IN

Roger W. Beuerman, PhD, Professor, Ophthalmology, Cell Biology and Anatomy, Louisiana State University Eye center, New Orleans, LA and Singapore Eye Research Institute, Singapore

Douglas Borchman, PhD, University of Louisville, Louisville, Kentucky, USA

Anthony Bron, BSc, MB, DO, FRCS, FRC Ophth, Professor Emeritus, Nuffield Laboratory of ophthalmology, University of Oxford, UK

Janine Clayton, MD, Office of research on Women's Health, National Institute of Health, Bethesda, MD

M. Reza Dana, MD, MPH, MSc, Director, Cornea Service, Massachusetts Eye & Infirmary; Senior Scientist, The Schepens Eye Research Institute, Harvard University, Boston, MA

Darlene Dartt, PhD, Senior Scientist, The Schepens Eye Research Institute, Boston, MA, USA

Suzanne Fleiszig, OD, PhD, FAAO, Associate Professor, Vision Science and Optometry, University of California Berkeley, Berkeley, CA

Gerd Geerling, Professor, Department of Ophthalmology, Heinrich-Heine University, Düsseldorf, Germany

Ilene K. Gipson, PhD, Senior Scientist, Schepens Eye Research Institute, Boston, MA, USA

Jose Gomes, MD, Federal University of São Paulo, São Paulo, Brazil

Pedram Hamrah, MD, Attending Physician & Surgeon, Cornea and Refractive Surgery Service, Massachusetts Eye & Ear Infirmary, Harvard Medical School, Boston, MA

W. Bruce Jackson, MD, Director, Ophthalmic Research, University of Ottawa, Ottawa, ON, Canada

Sandeep Jain, MD, Director, Corneal Neurobiology Laboratory, University of Illinois, Louisville, KY

Winston W.-Y. Kao, PhD, Professor, Ophthalmology, University of Cincinnati, Cincinnati, OH

Shigeru Kinoshita, MD, Professor and Chairman, Department of Ophthalmology, Kyoto Prefectural University of Medicine, Kyoto, Japan

Friedrich E. Kruse, MD, Professor and Chairman, University of Erlangen-Nuremberg, Erlangen, Germany

Peter Laibson, MD, Director Emeritus, Cornea Service, Wills Eye Institute, Professor, Thomas Jefferson University School of Medicine, Philadelphia, PA

Zuguo Liu, PhD, Professor and Director, Eye Institute of Xiamen University, Xiamen, Fujian, PRC

Mark J. Mannis, MD, FACS, Professor of Ophthalmology, University of California at Davis, Davis, CA

James P. McCulley, MD, FACS, FRCOphth (UK), Professor and Chairman, Department of Ophthalmology, University of Texas Southwestern Medical School, Dallas, TX

Austin K. Mircheff, OD, MPH, PhD, Professor of Physiology and Biophysics, Professor of Ophthalmology, Doheny Eye Institute, University of Southern California, Los Angeles, CA

Jason Nichols, University of Houston, Houston, Texas, USA

Kelly Nichols, OD, MPH, PhD, University of Houston, Ocular Surface Institute, Houston, TX

Stephen Pflugfelder, MD, Professor of Ophthalmology, Baylor College of Medicine, Houston, TX

Michelle Senchyna, PhD, Director, Clinical Development, Global Product Enhancement-Ophthalmology, Allergan, Inc., Irvine, CA

Michael Stern, PhD, Research Investigator, Allergan, Inc., Irvine, CA

Benjamin Sullivan, PhD, Chief Scientific Officer, TearLab Corporation, San Diego, CA

Donald T. Tan, FRCS, Director, Singapore Eye Research Institute, National University of Singapore, Singapore

Alan Tomlinson, MSc, PdD, DSC, Professor and head, Vision Sciences, Glasgow Caledonian University, Glasgow, Scotland, UK

Scheffer C.G. Tseng, MD, PhD, President, Ocular Surface Center, Miami, FL

Kazuo Tsubota, MD, Professor and Head, Department of Ophthalmology, Keio University School of Medicine, Tokyo, Japan

Vasilis Vasiliou, PhD, Professor of Molecular Toxicology, University of Colorado Denver, Denver, CO

Graeme Stewart Wilson, OD, Optom, MSc, PhD, Professor, Optometry, Indiana University at Bloomington, Bloomington, IN

Norihiko Yokoi, MD, PhD, Associate Professor, Ophthalmology, Kyoto Prefectural University of Medicine, Kyoto, Japan

GUIDE FOR AUTHORS

A peer-reviewed quarterly journal, *The Ocular Surface (TOS)* features concise, state-of-the-art, referenced review articles to elucidate the vast body of findings in this rapidly evolving field. Its purview ranges from molecular biology to surgery, encompassing lacrimal, lid, and ocular surface physiology, pathology, pharmacology, and medical/surgical therapeutic interventions. TOS also publishes select original research reports and articles describing innovative techniques and technology. Descriptions of desired content and requirements for articles are described below under the section headings: *Review Articles*; *Original Research Articles*; *Innovative Techniques and Technology*. All manuscripts undergo peer review by two or more reviewers. Authors are asked to revise their manuscripts, addressing all the reviewers' suggestions or explaining their reasons for declining to do so.

Guidelines for Writing Articles

Review Articles

Most reviews are written at the invitation of the editors, but independent proposals of articles are welcomed. To propose a review, please email a brief description of the intended review to Editor-in-Chief Gary Foulks, MD (foulksgary@gmail.com) and Managing Editor Susan Erickson (s.erickson7@verizon.net). If the editors consider the topic to be appropriate, you will be asked to submit a detailed outline and tentative bibliography for peer review.

Reviews should follow a topic-based outline, labeled with headings and subheadings [I,A,1,a, (1), (a)]. A TOS review should not be a general overview of a topic, but rather an in-depth, literature-based, critical review that emphasizes areas of new information, controversies, etc. The authors' own findings may be cited in the context of findings published in the literature, but original work should not be the focus of the review. The readers will have various levels of understanding about specific topic areas, so it is important for authors to provide the background, definitions, and explanations necessary to enhance understanding. Illustrative figures and diagrams are very helpful.

Length

Appropriate length is usually about 10-14 printed pages (equivalent to about 24-34 double-spaced manuscript pages, including references, figures and tables).

References

A review article should not cite all publications relevant to the topic of the article; rather, the references should be selected according to their importance and usefulness in clarifying, documenting, and providing historical background. Multiple similar references to document a statement are usually not needed.

The appropriate number of references varies according to the length of the article and the complexity of the topic. The number of references in a 12-14 page review article (20-30 double-spaced typed pages of text) should seldom exceed 150, although there may be exceptions to this guideline. Authors are encouraged to request advice from the editors if it seems that more references are appropriate.

The review manuscript should state the method of literature selection, specifying search words and data bases used, as well as the date of search; number of articles retrieved; criteria for selecting articles for inclusion in review; criteria for excluding articles.

Innovative Techniques and Technology

Evolving technologies and techniques in both the basic and clinical arenas often do not have sufficient published peer-reviewed data to permit a comprehensive review for inclusion in the basic science, clinical research, or clinical practice sections of *The Ocular Surface*. Nonetheless, there is a value to both researcher and clinician in being aware of the potential applications and pitfalls of such new technology. In order to inform our readership of evolving technologies and techniques, publication of articles describing such options with adequate peer review is appropriate.

Appropriate length for ITT articles is usually about 6-8 printed pages, including figures and references (equivalent of about 9-14 double-spaced typed pages).

Guidelines 1. Technologies or techniques should provide a significant insight or advance in the basic or clinical investigation or treatment of the ocular surface. 2. Manuscripts should critically describe outcome data, not just a proposed method or technique. 3. Figures or diagrams to illustrate the application or interpretation of the technique should be included. 4. Appropriate references to support conclusions and claims should be provided, even if the number of such references is limited. 5. Commercial bias must be avoided, and the value of the technology/technique must be factually supported, not speculative. 6. The author must fully disclose all proprietary and financial interests or support. 7. An attempt will be made to include such articles in issues that have a corresponding related topic in any review of the three major sections of the journal.

Suggested format Brief introduction describing purpose of the procedure, other procedures used for the same purpose, and advantages of (need for) the new procedure. Description of the technique, including theoretical basis and steps in performing (including figures and diagrams). Outcome data Summary/Conclusion

Original Research Reports

The goal of including original research articles in TOS is to provide rapid, peer-reviewed publication of high-quality, high-impact information that holds promise of significantly advancing the understanding of the ocular surface. The work should present new conceptual frameworks or novel research findings that challenge or enhance our current approach to clinical practice or research. To this end, the research must: 1. Be original research of the author that is conducted with sound scientific method 2. Provide new information that answers a specific question regarding ocular surface health or disease 3. Provide new, mechanistically based information 4. Be presented according to the author guidelines and format listed below 5. Be performed according to tenets of good laboratory and clinical practice: a. If involving laboratory animals, the work should conform to the ARVO guidelines for humane use of such animals; b. If involving human subjects, the work should conform to the Declaration of Helsinki and provide for informed consent in an IRB approved protocol; c. If involving a clinical trial, should be registered with a clinical trial registry 6. Be presented in a clear, logical manner with sufficient detail to be reproducible by other researchers 7. Present rationale and statistical analysis of data to support conclusions

Format 1. Title Page: (As above under "Manuscript Preparation") 2. Structured abstract: A structured abstract of fewer than 250 words is required for original research articles and should be arranged under the following headings: Purpose, Methods, Results, and Conclusions. Abbreviations should be defined at first mention, Do not include references. The abstract must be included as part of the main manuscript file. 3. Text: *The Ocular Surface* recommends a 3,500 or fewer word count, excluding title page, legends, and references. The text should be double-spaced.

In a brief **Introduction**, provide the research rationale and objectives without extensively reviewing the literature. In the **Methods** section, describe the experimental design, subjects used, and procedures followed. Previously published procedures should be identified by reference only. Provide sufficient detail to enable others to duplicate the research. Use standard chemical or nonproprietary pharmaceutical nomenclature. In parentheses, identify specific sources by brand name, company, city, and state or country. A description of the statistical analysis techniques should be included.

If human subjects were involved in the investigation, the Methods section must confirm that: (1) the research followed the tenets of the Declaration of Helsinki; (2) informed consent was obtained from the subjects after explanation of the nature and possible consequences of the study; and (3) where applicable, the research was approved by the institutional human experimentation committee or institutional review board (IRB).

If experimental animals were used in the investigation, the Methods section must confirm adherence to the ARVO Statement for the Use of Animals in Ophthalmic and Vision Research and, where applicable, approval by the appropriate animal research review board.

Present the **Results** with a minimum of discussion. Cite all tables and figures in numerical order. Limit the **Discussion** to statistically significant data and their limitations. Do not reiterate results. 4. Acknowledgments: Acknowledgments should be written in the third person and be limited to colleagues and research assistants. Acknowledgments are not meant to recognize appreciation for personal or manuscript production support. Including dedications to individuals or groups is not allowed. 5. References (as described above under "Manuscript Preparation")

Submission

Manuscripts should be submitted through Elsevier Editorial System (EES): <http://ees.elsevier.com/theocularsurface/>

BEFORE YOU BEGIN

Ethics in publishing

For information on Ethics in publishing and Ethical guidelines for journal publication see <http://www.elsevier.com/publishingethics> and <http://www.elsevier.com/journal-authors/ethics>.

Human and animal rights

If the work involves the use of animal or human subjects, the author should ensure that the work described has been carried out in accordance with The Code of Ethics of the World Medical Association (Declaration of Helsinki) for experiments involving humans <http://www.wma.net/en/30publications/10policies/b3/index.html>; EU Directive 2010/63/EU for animal experiments http://ec.europa.eu/environment/chemicals/lab_animals/legislation_en.htm; Uniform Requirements for manuscripts submitted to Biomedical journals <http://www.icmje.org>. Authors should include a statement in the manuscript that informed consent was obtained for experimentation with human subjects. The privacy rights of human subjects must always be observed.

Conflict of interest

All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. If there are no conflicts of interest then please state this: 'Conflicts of interest: none'. See also <http://www.elsevier.com/conflictsofinterest>. Further information and an example of a Conflict of Interest form can be found at: http://help.elsevier.com/app/answers/detail/a_id/286/p/7923.

Submission declaration and verification

Submission of an article implies that the work described has not been published previously (except in the form of an abstract or as part of a published lecture or academic thesis or as an electronic preprint, see <http://www.elsevier.com/postingpolicy>), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify originality, your article may be checked by the originality detection service CrossCheck <http://www.elsevier.com/editors/plagdetect>.

Changes to authorship

This policy concerns the addition, deletion, or rearrangement of author names in the authorship of accepted manuscripts:

Before the accepted manuscript is published in an online issue: Requests to add or remove an author, or to rearrange the author names, must be sent to the Journal Manager from the corresponding author of the accepted manuscript and must include: (a) the reason the name should be added or removed, or the author names rearranged and (b) written confirmation (e-mail, fax, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed. Requests that are not sent by the corresponding author will be forwarded by the Journal Manager to the corresponding author, who must follow the procedure as described above. Note that: (1) Journal Managers will inform the Journal Editors of any such requests and (2) publication of the accepted manuscript in an online issue is suspended until authorship has been agreed.

After the accepted manuscript is published in an online issue: Any requests to add, delete, or rearrange author names in an article published in an online issue will follow the same policies as noted above and result in a corrigendum.

Copyright

Upon acceptance of an article, authors will be asked to complete a 'Journal Publishing Agreement' (for more information on this and copyright, see <http://www.elsevier.com/copyright>). An e-mail will be sent to the corresponding author confirming receipt of the manuscript together with a 'Journal Publishing Agreement' form or a link to the online version of this agreement.

Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution and for all other derivative works, including compilations and translations (please consult <http://www.elsevier.com/permissions>). If excerpts from other copyrighted works are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has preprinted forms for use by authors in these cases: please consult <http://www.elsevier.com/permissions>.

For open access articles: Upon acceptance of an article, authors will be asked to complete an 'Exclusive License Agreement' (for more information see <http://www.elsevier.com/OAauthoragreement>). Permitted third party reuse of open access articles is determined by the author's choice of user license (see <http://www.elsevier.com/openaccesslicenses>).

Author rights

As an author you (or your employer or institution) have certain rights to reuse your work. For more information on author rights for (a) subscription articles please see <http://www.elsevier.com/journal-authors/author-rights-and-responsibilities>; (b) for open access articles please see <http://www.elsevier.com/OAauthoragreement>.

Role of the funding source

You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement then this should be stated.

Funding body agreements and policies

Elsevier has established a number of agreements with funding bodies which allow authors to comply with their funder's open access policies. Some authors may also be reimbursed for associated publication fees. To learn more about existing agreements please visit <http://www.elsevier.com/fundingbodies>.

Funding body agreements and policies

Elsevier has established a number of agreements with funding bodies which allow authors to comply with their funder's open access policies. Some authors may also be reimbursed for associated publication fees. To learn more about existing agreements please visit <http://www.elsevier.com/fundingbodies>.

After acceptance, open access papers will be published under a noncommercial license. For authors requiring a commercial CC BY license, you can apply after your manuscript is accepted for publication.

Open access

This journal offers authors a choice in publishing their research:

Open access

- Articles are freely available to both subscribers and the wider public with permitted reuse
- An open access publication fee is payable by authors or on their behalf e.g. by their research funder or institution

Subscription

- Articles are made available to subscribers as well as developing countries and patient groups through our universal access programs (<http://www.elsevier.com/access>).
- No open access publication fee payable by authors.

Your publication choice will have no effect on the peer review process or acceptance of submitted articles.

For open access articles, permitted third party (re)use is defined by the following Creative Commons user licenses:

Creative Commons Attribution-NonCommercial-NoDerivs (CC BY-NC-ND)

For non-commercial purposes, lets others distribute and copy the article, and to include in a collective work (such as an anthology), as long as they credit the author(s) and provided they do not alter or modify the article.

The open access publication fee for this journal is **\$3,000**, excluding taxes. Learn more about Elsevier's pricing policy: <http://www.elsevier.com/openaccesspricing>.

Language (usage and editing services)

Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the English Language Editing service available from Elsevier's WebShop (<http://webshop.elsevier.com/languageediting/>) or visit our customer support site (<http://support.elsevier.com>) for more information.

Informed consent and patient details

Studies on patients or volunteers require ethics committee approval and informed consent, which should be documented in the paper. Appropriate consents, permissions and releases must be obtained where an author wishes to include case details or other personal information or images of patients and any other individuals in an Elsevier publication. Written consents must be retained by the author and copies of the consents or evidence that such consents have been obtained must be provided to Elsevier on request. For more information, please review the *Elsevier Policy on the Use of Images or Personal Information of Patients or other Individuals*, <http://www.elsevier.com/patient-consent-policy>. Unless you have written permission from the patient (or, where applicable, the next of kin), the personal details of any patient included in any part of the article and in any supplementary materials (including all illustrations and videos) must be removed before submission.

Submission

Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

Submit your article

Please submit your article via <http://ees.elsevier.com/theocularsurface/>.

Referees

Please submit the names and institutional e-mail addresses of several potential referees. For more details, visit our [Support site](#). Note that the editor retains the sole right to decide whether or not the suggested reviewers are used.

Style

Follow guidelines of style, terminology, measurement, and quantitation as set forth in the American Medical Association Manual of Style (10th ed., New York, Oxford University Press, 2007).

PREPARATION

Use of word processing software

It is important that the file be saved in the native format of the word processor used. The text should be in single-column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. In particular, do not use the word processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc. When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier: <http://www.elsevier.com/guidepublication>). Note that source files of figures, tables and text graphics will be required whether or not you embed your figures in the text. See also the section on Electronic artwork.

To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

Article structure

Subdivision - unnumbered sections

Divide your article into clearly defined sections. Each subsection is given a brief heading. Each heading should appear on its own separate line. Subsections should be used as much as possible when cross-referencing text: refer to the subsection by heading as opposed to simply 'the text'.

Introduction

State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results.

Material and methods

Provide sufficient detail to allow the work to be reproduced. Methods already published should be indicated by a reference: only relevant modifications should be described.

Results

Results should be clear and concise.

Discussion

This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.

Conclusions

The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.

Appendices

If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

Essential title page information

- **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
- **Author names and affiliations.** Where the family name may be ambiguous (e.g., a double name), please indicate this clearly. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.
- **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. **Ensure that phone numbers (with country and area code) are provided in addition to the e-mail address and the complete postal address. Contact details must be kept up to date by the corresponding author.**
- **Present/permanent address.** If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

Structured abstract

A structured abstract, by means of appropriate headings, should provide the context or background for the research and should state its purpose, basic procedures (selection of study subjects or laboratory animals, observational and analytical methods), main findings (giving specific effect sizes and their statistical significance, if possible), and principal conclusions. It should emphasize new and important aspects of the study or observations.

Keywords

Immediately after the abstract, provide a maximum of 6 keywords, using American spelling and avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

Abbreviations

Define abbreviations that are not standard in this field in a footnote to be placed on the first page of the article. Such abbreviations that are unavoidable in the abstract must be defined at their first mention there, as well as in the footnote. Ensure consistency of abbreviations throughout the article.

Acknowledgements

Collate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

Units

Follow internationally accepted rules and conventions: use the international system of units (SI). If other units are mentioned, please give their equivalent in SI.

Footnotes

Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors can build footnotes into the text, and this feature may be used. Otherwise, please indicate the position of footnotes in the text and list the footnotes themselves separately at the end of the article. Do not include footnotes in the Reference list.

Artwork

Image manipulation

Whilst it is accepted that authors sometimes need to manipulate images for clarity, manipulation for purposes of deception or fraud will be seen as scientific ethical abuse and will be dealt with accordingly. For graphical images, this journal is applying the following policy: no specific feature within an image may be enhanced, obscured, moved, removed, or introduced. Adjustments of brightness, contrast, or color balance are acceptable if and as long as they do not obscure or eliminate any information present in the original. Nonlinear adjustments (e.g. changes to gamma settings) must be disclosed in the figure legend.

Electronic artwork

General points

- Make sure you use uniform lettering and sizing of your original artwork.
- Embed the used fonts if the application provides that option.
- Aim to use the following fonts in your illustrations: Arial, Courier, Times New Roman, Symbol, or use fonts that look similar.
- Number the illustrations according to their sequence in the text.
- Use a logical naming convention for your artwork files.
- Provide captions to illustrations separately.
- Size the illustrations close to the desired dimensions of the printed version.
- Submit each illustration as a separate file.

A detailed guide on electronic artwork is available on our website:

<http://www.elsevier.com/artworkinstructions>

You are urged to visit this site; some excerpts from the detailed information are given here.

Formats

If your electronic artwork is created in a Microsoft Office application (Word, PowerPoint, Excel) then please supply 'as is' in the native document format.

Regardless of the application used other than Microsoft Office, when your electronic artwork is finalized, please 'Save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):

EPS (or PDF): Vector drawings, embed all used fonts.

TIFF (or JPEG): Color or grayscale photographs (halftones), keep to a minimum of 300 dpi.

TIFF (or JPEG): Bitmapped (pure black & white pixels) line drawings, keep to a minimum of 1000 dpi.

TIFF (or JPEG): Combinations bitmapped line/half-tone (color or grayscale), keep to a minimum of 500 dpi.

Please do not:

- Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); these typically have a low number of pixels and limited set of colors;
- Supply files that are too low in resolution;
- Submit graphics that are disproportionately large for the content.

Color artwork

Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF) or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these

figures will appear in color online (e.g., ScienceDirect and other sites) in addition to color reproduction in print. For further information on the preparation of electronic artwork, please see <http://www.elsevier.com/artworkinstructions>.

Illustration services

Elsevier's WebShop (<http://webshop.elsevier.com/illustrationservices>) offers Illustration Services to authors preparing to submit a manuscript but concerned about the quality of the images accompanying their article. Elsevier's expert illustrators can produce scientific, technical and medical-style images, as well as a full range of charts, tables and graphs. Image 'polishing' is also available, where our illustrators take your image(s) and improve them to a professional standard. Please visit the website to find out more.

Figure captions

Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (**not** on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

Tables

Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules.

References

Citation in text

Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.

Reference links

Increased discoverability of research and high quality peer review are ensured by online links to the sources cited. In order to allow us to create links to abstracting and indexing services, such as Scopus, CrossRef and PubMed, please ensure that data provided in the references are correct. Please note that incorrect surnames, journal/book titles, publication year and pagination may prevent link creation. When copying references, please be careful as they may already contain errors. Use of the DOI is encouraged.

Web references

As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

Reference style

References should be numbered consecutively and typed double-spaced. Journal titles should be abbreviated, without periods, according to the Index Medicus style. Citation of abstracts may be acceptable if 1) the cited report is not available in full-length form, and 2) the abstract is published in an indexed journal (e.g., ARVO abstract published Invest Ophthalmol Vis Sci). In the text, statements referenced by abstracts should be acknowledged as such, e.g., "Preliminary findings suggest" Complete information should be given for each reference, as shown below. Publications with 1-4 authors should give all names; publications with more than four authors should name the first three followed by "et al." Author last names are followed by initials without commas or periods.

Journal Article

1. Jones JP. Pitfalls in the design of clinical trials for anti-dry eye agents. Ocul Surf 2015;13:2-16

Abstract

2. Smith PS, Williams LC. Effects of artificial tear solutions on osmolarity of dry eyes (abstract). Invest Ophthalmol Vis Sci 2015;59, ARVO E-Abstract 4015

Book

3. Charles PO, van Housen Q Jr, Duchon PX, et al (eds): *Cornea, conjunctiva, lid: new concepts*. New York, NY, Random House, 2015

Chapter in book

4. Aay OK: Effect of estrogen medications on the cornea, in Charles PO, van Housen Q Jr, Duchon PX, et al (eds): *Cornea, conjunctiva, lid: new concepts*. New York, NY, Random House, 2015, pp 234-25

Journal abbreviations source

Journal names should be abbreviated according to the List of Title Word Abbreviations: <http://www.issn.org/services/online-services/access-to-the-ltwa/>.

Submission checklist

The following list will be useful during the final checking of an article prior to sending it to the journal for review. Please consult this Guide for Authors for further details of any item.

Ensure that the following items are present:

One author has been designated as the corresponding author with contact details:

- E-mail address
- Full postal address
- Phone numbers

All necessary files have been uploaded, and contain:

- Keywords
- All figure captions
- All tables (including title, description, footnotes)

Further considerations

- Manuscript has been 'spell-checked' and 'grammar-checked'
- References are in the correct format for this journal
- All references mentioned in the Reference list are cited in the text, and vice versa
- Permission has been obtained for use of copyrighted material from other sources (including the Internet)

Printed version of figures (if applicable) in color or black-and-white

- Indicate clearly whether or not color or black-and-white in print is required.
- For reproduction in black-and-white, please supply black-and-white versions of the figures for printing purposes.

For any further information please visit our customer support site at <http://support.elsevier.com>.

AFTER ACCEPTANCE

Use of the Digital Object Identifier

The Digital Object Identifier (DOI) may be used to cite and link to electronic documents. The DOI consists of a unique alpha-numeric character string which is assigned to a document by the publisher upon the initial electronic publication. The assigned DOI never changes. Therefore, it is an ideal medium for citing a document, particularly 'Articles in press' because they have not yet received their full bibliographic information. Example of a correctly given DOI (in URL format; here an article in the journal *Physics Letters B*):

<http://dx.doi.org/10.1016/j.physletb.2010.09.059>

When you use a DOI to create links to documents on the web, the DOIs are guaranteed never to change.

Proofs

One set of page proofs (as PDF files) will be sent by e-mail to the corresponding author (if we do not have an e-mail address then paper proofs will be sent by post) or, a link will be provided in the e-mail so that authors can download the files themselves. Elsevier now provides authors with PDF proofs which can be annotated; for this you will need to download Adobe Reader version 9 (or higher) available free from <http://get.adobe.com/reader>. Instructions on how to annotate PDF files will accompany the proofs (also given online). The exact system requirements are given at the Adobe site: <http://www.adobe.com/products/reader/tech-specs.html>.

If you do not wish to use the PDF annotations function, you may list the corrections (including replies to the Query Form) and return them to Elsevier in an e-mail. Please list your corrections quoting line number. If, for any reason, this is not possible, then mark the corrections and any other comments (including replies to the Query Form) on a printout of your proof and return by fax, or scan

the pages and e-mail, or by post. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. We will do everything possible to get your article published quickly and accurately. It is important to ensure that all corrections are sent back to us in one communication: please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

Offprints

The corresponding author, at no cost, will be provided with a personalized link providing 50 days free access to the final published version of the article on [ScienceDirect](#). This link can also be used for sharing via email and social networks. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Both corresponding and co-authors may order offprints at any time via Elsevier's WebShop (<http://webshop.elsevier.com/myarticleservices/offprints>). Authors requiring printed copies of multiple articles may use Elsevier WebShop's 'Create Your Own Book' service to collate multiple articles within a single cover (<http://webshop.elsevier.com/myarticleservices/booklets>).

AUTHOR INQUIRIES

You can track your submitted article at http://help.elsevier.com/app/answers/detail/a_id/89/p/8045/. You can track your accepted article at <http://www.elsevier.com/trackarticle>. You are also welcome to contact Customer Support via <http://support.elsevier.com>.
