Researchers at every stage of their scientific careers encounter unknown topics and concepts and require background and contextual knowledge to progress. But finding one’s path through a literature search to find these answers can be overwhelming. On the way from hypothesis to discovery, a researcher can easily be caught up in the morass of siloed information, untrusted sources, and site hopping just to explore a single unknown idea or topic.

Imagine if there was a straight path to the answers researchers needed built right within their research workflow.
