

## What is Pure?

### Comprehensive research information management

Pure is a comprehensive research information management system (CRIS) that aggregates your organization's research information from numerous internal and external sources, and **ensures the data that drives your strategic decisions is trusted, comprehensive and accessible in real time.**

Pure enables organizations to:

- Build reports
- Manage researcher profiles
- Enable expertise identification
- Manage the funding discovery process
- Showcase your researcher's achievements

...and more, all while **reducing administrative burden for researchers, faculty and staff.**

### Capture data across the world of research

Pure combines your institution's internal databases - such as your HR, student administration, finance and award management systems - along with external data sources such as Scopus, Web of Science, Mendeley, Embase, PubMed, arXiv and WorldCat®, plus any legacy data, **into a single reliable system.** Through workflows that ensure quality and completeness, **Pure captures and centrally stores a vast range of research information, including data that may not have been collected previously.**

System administrators can monitor research performance via a broad range of indicators, use Pure's dashboards and reporting tools for overviews and drill-downs, to make forecasts, and to benchmark against world citation averages and other factors.

All this makes Pure a tool not only for strategic managers and research support offices, but for researchers, PIs, and departmental managers, as well.
