Why boost the efficiency of biomedical literature monitoring for adverse drug reactions?

Search strings for adverse drug reactions should have high recall and very high precision.

Databases for pharmacovigilance should also:

- Be comprehensive
- Be of high quality
- Be updated regularly
- Be relevant to the field

PV Wizard is designed for easily quicker creation of high-recall, high-precision searches for adverse drug reaction information.

Embase supports efficient literature monitoring for adverse drug reactions.

Here’s how you can build complete searches in minutes with PV Wizard.

1. Enter adverse drug reaction
   
2. Enter adverse event
   
3. Enter special situations
   
4. Enter human limits and duration years
   
5. Enter any alternative names
   
6. Enter any other terms

PV Wizard is only available on Embase.com.
