

## Geofacets™ Fact Sheet

### About the Geofacets-GSL Millennium Edition

Geofacets is a geoscience solution designed for exploration geoscientists. Elsevier and the Geological Society of London (GSL) have partnered together to provide GSL members with a unique opportunity to gain individual access to thousands of geological maps from the renowned Lyell Collection through the Geofacets platform.

#### USE SEARCH FEATURES DESIGNED FOR GEOSCIENTISTS:

- Search for map content via the interactive map interface
- Use geo-based search facets to refine results by map type, surface area, and geological basin
- Use advanced keyword search to search for specific terms, geological deposit models or analogs

#### DISCOVER AND DOWNLOAD MAPS:

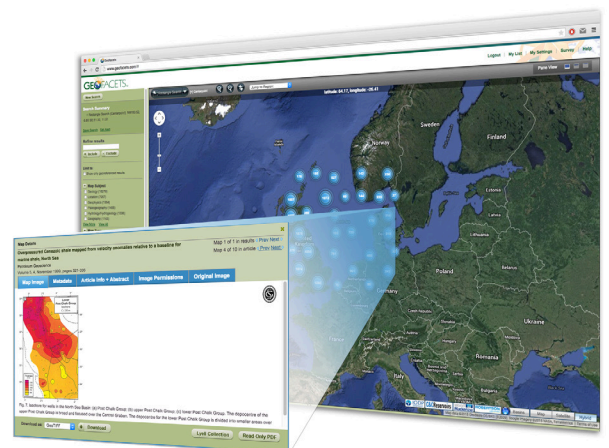

- 27,000+ maps from the books and journals of GSL's renowned Lyell Collection published from 2000–present
- All maps are downloadable, with 18,000+ available as GeoTIFFs for easy integration with GIS and other software
- Each map is accompanied by metadata such as geographic coordinates, map surface area, datum and projection for georeferenced maps, and more
- View reference information about the maps and the associated articles
