How to share and embed Scopus videos

As part of the Scopus toolkit, we’ve created a couple of videos to help onboard your community and share best practices for using Scopus. We encourage you to share these videos in a method that works best for your researchers. To help you with this, we’ve put together a simple guide on how to share our video player. A key benefit of using one of these methods is that it ensures your viewers see the latest video we’ve uploaded, without requiring you to update any links or codes.

Scopus videos include:
Get started with Scopus

There are several ways to share our videos with your community:

- Use the ‘share’ button to share via Facebook or Twitter
- Use the ‘link’ button to copy the link into email, training presentations and guides, or elsewhere
- Use the ‘get code’ button to embed an video

To get started, play one of the videos and hover over to view the video player. You’ll find the sharing options in the upper right hand corner (as seen in figure 1)
Sharing via Facebook or Twitter

To share via Facebook or Twitter, click on the share button: and select the desired site as seen in figure 2.

![Figure 2](image)

Sharing as a link in email, training presentations and elsewhere

To include the link in an email, within a training guide or somewhere else, simply select the link button: and click on the ‘copy link’ button (see figure 3 below).

Embedding the video on your website

You also can easily grab our video player and place it in your own web page and/or blog. This is a great way to highlight training and ensure your users can find and access our videos. To do this, select the "Get code" button. Then select either ‘Embed Code’ to copy the HTML code and embed the video directly into a website, or select your blog service and enter your username and password to add it to your blog (see figure 4 below).
