## 3 THINGS YOU LIKE ABOUT EMBASE

1. Full text availability
2. Inclusion of Russian journals in the database
3. Integrated functionality with MEDLINE

### What is your institute's focus?

Moscow State Lomonosov University (MGU) provides higher and postgraduate education, and performs research. It is the most prestigious Russian university, and a leader in higher education in the region.

### How long have you been with MGU?

I've worked here for 15 years. I'm currently a senior lecturer and I supervise an environmental sciences research group.

### What is the focus of your work?

I'm a lecturer for disciplines connected with human health. I supervise between 4 and 8 undergraduate and postgraduate researchers annually, providing them with modern sources of biomedical information. I also write scientific protocols, papers and text-books. For my work, I need the newest and most up-to-date biomedical information.

### What inspires and motivates you?

Education. Seeing students reach their potential and find their area in postgraduate research. Getting published is also a great driving force!

### What keeps you awake at night?

Knowing that I need to stay up-to-date with a vast range of publications in human ecology, environmental sciences, and human health. It's a huge task.

### How does Embase support you?

Embase is an extremely reliable bibliographical database for biomedical journals. As an environmental scientist, I don't need to go deeply into biomedical research but I still require full and up-to-date information in this field for geographic and ecological impact studies. Everything I need from biomedical journals I get from Embase. For example, we used Embase during our research into the influence of antibiotics in milk products on human health in Northern Kazakhstan.

### Would you recommend Embase to your colleagues?

Certainly. I am grateful for all the possibilities and results that I can get with Embase.
