

ELSEVIER

Supporting Open Access

We offer a mix of publishing models to reflect the different ways authors choose to publish articles. There is growing demand for open access and we are working hard to meet that option for researchers. Here are 10 ways in which we do that.

#1

Over 85% of our journals offer the option to **publish open access** and make an article permanently available, immediately, at a **price below industry average** while delivering **above-average quality**.

More than **85%**

#2

All of our journals offer a free, **green open access** option. Every year, we actively make over **45,000** subscription articles available green open access - more than any other publisher.

100%

#3

We are investing in capacity-building to remain **one of the fastest-growing open access publishers**. In 2018 we published **26%** more open access articles than the previous year.

#4

Over 70% of the **journals** we launched in the past three years are fully open access, bringing the total to over **250** gold OA journals. These sit alongside 1900 hybrid journals that already offer the option to publish open access.

More than **70%**

#5

We continue to **evolve, explore and create** new OA options to fit our authors' needs, including experimenting with **mirror journals** and different article formats such as methods and software.

#6

We make **open archives** available for **130 journals**, including Cell Press titles after 12 months.

130 Journals

#7

We **work closely with funders and institutions** around the world, supporting researchers through **agreements** in Norway, Finland, Italy, UK, Portugal, Japan, the US and others to make articles open access.

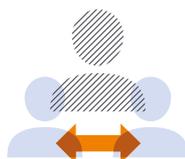

#8

We make it **easy to find OA** articles. Through our **partnership with ImpactStory**, over **8.5 million** articles are now tagged as "open access" in Scopus.

8.5M

#9

We encourage researchers to **share their work** prior to peer-review on any platform of their choice, including **SSRN**, where over 400,000 authors have uploaded 731,000+ papers across 37 disciplines, generating **13.1 million annual downloads**.

#10

We support over 600 research institutions worldwide in **building their open access programs** with **Digital Commons**, hosting over 3 million open access articles that have been shared more than half a billion times.
