

# Pure Community Module

Facilitating the management of multi-institutional research projects

The Pure Community Module is designed to overcome the challenge of multi-institutional discoverability and management of research projects.

The Pure Community Module helps groups of institutions (based on geographic region, academic consortium, or a focused research area) to manage and promote their research from one shared location. This allows them to demonstrate their combined impact to funding agencies and government bodies, to share resources internally, and to attract investment and talent.

With this module they can collectively track and manage processes, or add a Community Portal to provide direct access to their combined resources and expertise from a shared website.

## How does the Pure Community Module work?

Each university participating in the Pure Community Module can run their own Pure instance, enabling integration with other data sources, local analytics and reporting. Optional university-specific portals for individual discover-ability of research are available.

Pure's standardizations and data formats ensure that it's easy to aggregate data into the Pure Community Module. Its user-friendly features enable users to quickly perform analytics and generate reports.

The Pure Community Module provides a centralized system that makes it easy to collect, de-duplicate and interrelate the data from a multi-institutional research community. This curated metadata can be used in the reporting engine and even published through an optional portal that is search engine-optimized to help others discover the expertise and assets of the community.

The optional public portal is configurable with options to include custom branding, allowing each community to present their desired face to the world.

The Pure Community Module provides a centralized system that makes it easy to collect, de-duplicate and interrelate the data from a multi-institutional research community.

## The benefits of the Pure Community Module

### For universities and research institutions

- Overcomes the challenges in reporting on multi-institutional collaboration
- Makes the research talent of the university discoverable to a larger community
- Helps identify new collaboration opportunities and attract new researchers
- Helps to formally track and visualize the collaboration process

### For community administrators (including government agencies and development authorities)

- Supports economic growth by facilitating strategic partnerships between businesses and local universities
- Promotes local research, assets and expertise, which can attract R&D-driven businesses
- Provides local businesses with an easy way to locate academic expertise for innovative research

### For researchers

- Highlights your work and the full scope of collaborative projects to a global audience
- Helps to identify and attract strategic collaboration and partnerships within the community

## What makes the Pure Community Module unique?

### The Pure Community Module is:

- Supported by Pure, the world's leading research information management system
- Always up-to-date, thanks to automatic harvesting from campus systems
- Backed by best in class support services, including post-implementation support through a customer consultant.
