

Emergency access

In partnership with the US National Library of Medicine on the Emergency Access Initiative, we provide temporary free access to full text articles to specialists and members of the public affected by disasters. For specific emergencies such as the opioid epidemic in America, the Zika outbreak or the coronavirus COVID-19 pandemic, we make free emergency resource centres with curated, relevant research on our website.

EAI was activated in response to:

2010

Haiti earthquake and cholera epidemic; flooding in Pakistan

2011–2013

The Great East Japan Earthquake and tsunami; Typhoon Haiyan in the Philippines

2014–2015

Ebola crisis; Nepal earthquake

2017

Hurricanes Irma, Harvey and Maria, and Mexico earthquakes

Access for journalists

Over 2000 journalists receive free access to all Elsevier publications via our Newsroom. Hundreds of them also receive a bi-weekly selection of Elsevier articles relevant for the wider public, making headlines in international publications such as The New York Times or The Guardian.

ScienceDirect is extremely useful. Many, many times I've gone through to a paywalled paper, and found I can access it through the site.

- Tom Whipple, Science Editor, The Times

In 2018, researchers have benefited from:

22

newsletters with lay summaries of relevant articles sent to journalists

161

pieces of news coverage generated by our press releases

Patient access

Patients and caregivers can make requests for individual papers related to medicine and healthcare at no cost. These papers can be requested by e-mailing patientaccess@elsevier.com. We aim to provide the requested articles within 24 hours.

We aim to provide the requested articles within

24 hours.

Connecting science & society

We are partnering with non-profits, institutions and organizations to bring scientific outputs closer to citizens, increasing science literacy, and making information available where it is most needed.

Showcasing research for a better world

Atlas

Researchers who published outstanding papers with the potential to benefit and advance progress in our shared planet are recognized with the Elsevier Atlas Award. The articles are made freely available and translated to common languages, while author interviews are made public to encourage the dissemination or implementation of their findings.

I'm very excited that this work is impacting lives, and I thank Elsevier for finding this work worthy and for making the efforts to make sure that it gets a much wider readership.

- Dr. Bawah, Senior Lecturer at the University of Ghana, and winner of the Atlas Award

THE
NOBEL
PRIZE

Celebrating Nobel Laureates

195 out of 196 Nobel Science and Economic Laureates since the year 2000 have published with Elsevier. To celebrate them and increase awareness of their findings, we make a collection of each year's laureates' work freely available to the public.

Access for disadvantaged communities

Through Research4Life, institutions in 120 low- and middle-income countries receive affordable access to nearly 100,400 peer reviewed resources. As founding member, Elsevier provides over a quarter of that content, as well as access to the abstract and citation database Scopus, and trainings for librarians.

ScienceDirect® On-site access

Thousands of members of the public can read Elsevier's peer-reviewed content through walk-in access at public and academic libraries around the world. Our ScienceDirect platform is available to the public via onsite user access from any participating university library or UK public library via the Access to Research program.

If we want to really advance the UN SDGs, capacity building is the most important thing we can focus on, and training librarians on how to effectively administer their resources is at the heart of it.

- Dr. Edda Tandi Lwoga, Deputy Rector at the College of Business Education in Dar es Salaam, Tanzania, and Research4Life's official user representative
