# Data Manager

Unlocking the full potential of research data

Data Manager – make storing, managing and sharing research data, easy, secure and most importantly compliant.

Research data is the foundation for all research, but poses challenges for researchers and institutions.

Especially when it comes to meeting funder mandates to preserve data and make it accessible.

PRESERVATION OF DATA

Researchers should spend their time doing great research and not have to worry about additional tasks.

By using Data Manager, they can upload data sets and create metadata with little time and effort, ensuring it can easily be found, re used and cited.

Integration with Hivebench electronic lab notebook allows metadata like annotations, methods and protocols to be captured at source and automatically uploaded into the Data Manager.

Pure

And integration with Research Information Systems like Pure enables easier, evidence based decisions around research data within the institution.

Benefits

Compliance to funder mandates without burdening the researcher or library

Easy to find data inside and outside of the institution

Improved data sharing and collaboration

Increased visibility and impact of research

Improved decision making around research data
