

Sharing Articles

Quick reference guide to sharing articles

The purpose of publishing research is to share new knowledge and be able to educate, connect and inspire others. This quick guide is your easy reference as to how Elsevier published articles can be access, shared and used.

Everyone

Everyone can access:

- All abstracts and citations on ScienceDirect for free and sign up for alerts as a guest user
- Over 250,000 open access articles published by Elsevier on ScienceDirect
- Archived material for free in over 100 journals, which includes all Cell Press articles after 12 months
- Special content being promoted in the media or social media such as Nobel prize winner's articles
- Research promoted by authors for free through Share Links posted by authors on social media sites such as Twitter and Facebook.
- Subscribed content by walking into a participating university library or UK public library or by paying for individual access either through pay per view or through a low cost rental option.
- Relevant medical information for patients and caregivers through free or low cost programs such as PatientInform and PatientAccess
- Datasets underlying published articles through datalinks with data repositories which are easily located next to article.
- Free and low cost access to more than 3,100 Elsevier journals and 13,000 Elsevier e-books in developing countries through the Research4Life program.
www.research4life.org

After reading, everyone can:

- Photocopy an article for personal use
- Use a short quote from an article (comprising one or two sentences) together with the appropriate citation
- List a bibliographic reference or citation for an article
- Use open access articles by following the permissions of the user license
- If you are using the articles for scholarly comment, non-commercial research or educational purposes¹ you can also quote:
 - o A single text extract of fewer than 100 words or a series of extracts totaling no more than 300 words
 - o A maximum of two figures from a journal article or a total of five from a journal volume (unless a separate copyright holder is identified in any figure)

Did you know?

Open access articles means everyone can access, share and reuse the article even commercially in some cases. You need to look at the user license attached to the article.

- Commercial license (CC BY): Everyone can share (copy and redistribute the article) and adapt (remix, transform and build upon the article) for any purpose even commercially.
- Non Commercial (CC BY NC-ND): Everyone can share the article and reuse the article (for example to download for text mining purposes or redistribute to others) for non-commercial purposes only.

¹As a signatory to the STM guidelines for "Quotation and other academic uses", Elsevier supports these additional permissions if the intended use is for scholarly comment, non-commercial research or educational purposes, and if full credit is provided.

Authors

Authors publishing in Elsevier journals can use their published journal articles for a wide range of scholarly purposes. Authors can:

- Share working papers of their research (preprints) anywhere at anytime
- Share their author manuscript privately on institutional repositories and on personal websites or blogs
- Refresh a posted preprint on arXiv and RePec with the author manuscript after acceptance
- Distribute copies, either in paper or electronic form, for classroom teaching
- Share with known research colleagues for their personal use
- Include as part of a thesis or dissertation
- Prepare other derivative works (such as creating an adaptation of the article)
- Include the final article in grant funding applications
- Use the final published articles for certain commercial uses which include:
 - Using the article in a subsequent compilation of the author's works
 - Extending the article to book-length form
 - Use or re-use portions or excerpts in other works
 - Further possibilities for gold open access articles published with a CC BY user license.

Did you know?

You can include your final article as part of your thesis or dissertation, for non-commercial purposes, without having to ask permission!

When sharing author manuscripts, Elsevier requires authors to attach a non-commercial Creative Commons user license (CC-BY-NC-ND). This is easy to do. On the accepted manuscript, authors should add the following to the title page, copyright information page, or header/footer:

© <year>. This manuscript version is made available under the CC-BY-NC-ND 4.0 license <http://creativecommons.org/licenses/by-nc-nd/4.0/>

Sharing author manuscripts publicly requires an embargo. For more information, see www.elsevier.com/sharingpolicy

Subscribers

Subscribers can:

- Access, search, browse and view subscribed content
- Print and download a limited number of articles, book chapters, abstracts and records
- Share excerpts of subscribed content, such as an article, by email or in print, to known research colleagues for the purpose of scholarly research or study.
- Store individual journal articles of subscribed content in a private library within a social networking site for their own personal use.
- Share individual journal articles from the subscribed content with a limited number of third party colleagues as part of an invitation-only working group on non-commercial platforms or tools, such as Mendeley, for personal, scholarly or research use.
- Enable members of the general public to use any publicly financed institution's physical terminals to access, search, browse, view and print articles
- Incorporate links to subscribed content on an intranet and internet websites as well as use links in connection with courses offered for academic credit within electronic coursepacks, course management systems, instructor websites and eReserve lists.
- Text and data mine subscribed content for non-commercial purposes by using our Application Programming Interface (APIs). Learn more www.elsevier.com./TDM

Additional sharing options:

- Develop a local database of Elsevier-published articles when an agreement is in place to acquire retention rights, or if the institution or corporation has a digital rights license with a local reproduction rights organization (RRO). Elsevier has digital preservation partnerships with CLOCKSS and Portico.
- For research produced by researchers at the university, articles can also be used for classroom teaching at the institution and for internal training purposes (including distribution of copies, paper or electronic, and use in coursepacks and courseware programs, but not in Massive Open Online Courses)
- Subscribers can also access journal articles or single book chapters subscribed to by other local institutions in their same country through interlibrary loan. See more <https://www.elsevier.com/about/our-business/policies/interlibrary-loan>

Sharing through institutional repositories

Non-commercial institutions can post research published by affiliated authors in their institutional repositories (IRs) by following some hosting guidelines:

IRs can host:

- Metadata and links to articles
- Preprint versions
- Accepted manuscripts immediately for internal use or private sharing. These accepted manuscripts can be made publicly available after embargo
- Final published gold open access articles

For more information, see:
www.elsevier.com/hostingpolicy

Elsevier can help ensure that the information within your IR is comprehensive, accurate and timely by providing complimentary access to APIs that:

- Automate retrieval of all article metadata of your affiliated authors for better coverage within your IR. Even if your repository doesn't hold the full text version, the article information and abstract can be displayed.
- Provide your IR users with access to the best available version by sharing user access entitlement information and the option to embed the final article into your repository.
- Include embargo period end dates, for repositories to make accepted manuscripts publicly available from the correct date.

For more information see:
<https://www.elsevier.com/solutions/sciencedirect/support/institutional-repository>

Elsevier

Empowering knowledge

Elsevier as a publisher has an important role in disseminating and promoting the final published article. We do this through:

Making published research more effective

ScienceDirect provides access to nearly 2,500 journals featuring over 13 million full-text publications and has been optimized so that users can quickly assess the relevancy of articles, extract key insights, and share, connect and collaborate with peers so that users can carry out more accurate, impactful research. This includes providing features such as:

- Article recommendation tool based on what your peers are reading
- Optimized resolutions for all types of devices from smart phones to desktops
- Remote access options for subscribed users to always access the best available version
- Indexed and optimized content to make it easier to find content through popular search engines
- Compliance to the latest accessibility standards making research accessible for the visually disabled.
- Easily evaluate the relevance and quality of an article by viewing:
 - Article-based metrics such as Scopus citation counts
 - References and citing articles
 - Interactive graphs, 3D models, and data visualizations
 - Figures and tables
 - Information about each author

Promoting research

Elsevier also promotes research through the following channels:

- Free alerts, including journals, table of contents, topic and search alerts to discover new content.
- View, read and download the 25 most popular articles in more than 20 subject areas.
- Editor's choice selection, where the top five articles chosen by the editors are promoted and made freely available for readers up to one year.
- Free Research Highlights app where users can preview the article abstract and then send the full text article to their inbox. See researchhighlights.elsevier.com
- Elsevier also promotes selected research papers to the global scientific media. We use a combination of press releases, the Elsevier Research Selection (Bi-weekly email sent out to more than 1600 subscribing journalists) and Elsevier Connect, our online platform with daily stories by science, technology and health professionals.

Getting permission

If you need to use a journal article for commercial purposes or for other purposes not specified in this guide you will need to get permission. This is easy to do directly via the online article by clicking the “Get rights and content” link or via our permissions team (see www.elsevier.com/permissions).

Reproducing articles

If you would like to make multiple copies, copies for advertising or promotional purposes, for resale or document delivery, then you need to request permission and pay a fee. Special rates are available for educational institutions. You can purchase individual or commercial reprints of an article via Elsevier's webshop www.webshop.elsevier.com.
