Reviews and Theoretical Advances

The purpose of the Reviews and Theoretical Advances section is to provide a forum for critical reviews and theoretical developments in the area of sport management. Papers in this section provide important contributions to sport management scholarship, helping to coalesce what might otherwise be divergent perspective on a topic, offer critiques of current practices, and advance the theoretical underpinnings of sport and sport organizations.

Reviews should be in the form of a systematic review, where authors “identify, appraise and synthesize all the empirical evidence that meets pre-specified eligibility criteria to answer a specific research question. Researchers conducting systematic reviews use explicit, systematic methods that are selected with a view aimed at minimizing bias, to produce more reliable findings to inform decision making” (Cochrane Reviews). We recognize that authors can adopt several approaches to conducting a systematic review; essential to the process, however, is explicitly stating their method and using a systematic approach to identify, select, and critically analyze the research. Systematic reviews should be “methodical, comprehensive, transparent, and replicable” (Siddaway et al., 2019, p. 751).

With theoretical advances, authors may (1) provide an overview of the existing theories used to explain various phenomena, offer an valuation of which theories provide the most powerful explanatory value, and integrate two or more theoretical perspectives to propose a novel way of addressing a problem or issue; or (2) offer new theoretical frameworks, where they identify the phenomena under consideration, provide an overview of the key constructs under consideration, and suggest how, why, and under what conditions these constructs relate to one another.

Information related to theory and theory development in the field can be found in Issue 1 of Volume 16.

Examples of past review articles can be found here: http://www.journals.elsevier.com/sport-management-review/review-articles/.

The Reviews and Theoretical Advances section is open submission. All manuscripts are subject to double-blind review.

Manuscripts must follow the Guide for Authors provided at http://www.journals.elsevier.com/sport-management-review/.
