Trends in Anaesthesia & Critical Care

Instructions for Authors:

Trends in Anaesthesia and Critical Care (TACC) is a journal of Original Airway Management Articles, Reviews, Focus, Opinions, Letters, Discussions and Book Reviews designed to help our general audience of students, basic scientists, pharmacologists, physician scientists and clinicians to stay abreast of current trends throughout the field and to facilitate communication between these groups of highly trained professionals. Please follow these instructions carefully as our editorial policy differs in important respects from that of primary research journals.

Manuscripts are peer reviewed and commissioning does not guarantee publication. If you cannot complete your manuscript by the deadline, please inform us of the delay and indicate the target date for completion.

Peer review • Trends in Anaesthesia and Critical Care is a peer-reviewed journal. Manuscripts that fail to meet our criteria for scientific content and style may be rejected, but more usually authors are asked to submit a revised version based on referees' and Editor's recommendations. Further editing will take place after acceptance.

Copyright • A ‘Transfer of Copyright’ agreement will be sent to you on acceptance of your article.

• Authors must sign the 'Transfer of Copyright' agreement before publication. This enables Elsevier Ltd to protect the copyrighted material for the authors, but does not relinquish the authors’ proprietary rights (e.g. patent rights). The copyright transfer covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microfilm, or any other reproductions of a similar nature, and translations. This includes the right to adapt the article for use in conjunction with computer systems and programs, including reproduction or publication in machine-readable form and in incorporation in retrieval systems.

• Authors are responsible for obtaining permission from the copyright holder to reproduce any material (including figures, tables, multi-media or excerpts) in which copyright subsists. Please use the attached Copyright Permission Request Form.

Ethics in Publishing:

General Statement Ethics • The Editor(s) and Publisher of this Journal believe that there are fundamental principles underlying scholarly or professional publishing. While this may not amount to a formal 'code of conduct', these fundamental principles with respect to the authors' paper are that the paper should: i) be the authors' own original work, which has not been previously published elsewhere, ii) reflect the authors' own research and analysis and do so in a truthful and complete manner, iii) properly credit the meaningful contributions of co-authors and co-researchers, iv) not be submitted to more than one journal for consideration, and v) be appropriately placed in the context of prior and existing research. Of equal importance are ethical guidelines dealing with research methods and research funding, including issues dealing with informed consent, research subject privacy rights, conflicts of interest and sources of funding. While it may not be possible to draft a 'code' that applies adequately to all instances and circumstances, we believe it useful to outline our expectations of authors and procedures that the Journal will employ in the event of questions concerning author conduct.

Conflicts of Interest • The Publisher now requires authors to declare any conflicts of interest that relate to papers accepted for publication in this Journal. A conflict of interest may exist when an author or the author's institution has a financial or other relationship with other people or organizations that may inappropriately influence the author's work. A conflict can be actual or potential and full disclosure to the Journal is the safest course. All submissions to the Journal must include disclosure of all relationships that could be viewed as presenting a potential conflict of interest. The Journal may use such information as a basis for editorial decisions and may publish such disclosures if they are believed to be important to readers in judging the manuscript. A decision may be made by the Journal not to publish on the basis of the declared conflict. For more information, please refer to:
http://www.elsevier.com/wps/find/authorshome.authors/conflictsofinterest.
Submission:

Submission to this journal proceeds totally online and you will be guided stepwise through the creation and uploading of your files. The system automatically converts source files to a single PDF file of the article, which is used in the peer-review process. Please note that even though manuscript source files are converted to PDF files at submission for the review process, these source files are needed for further processing after acceptance. All correspondence, including notification of the Editor’s decision and requests for revision, takes place by e-mail removing the need for a paper trail.

Please submit your article via https://www.evise.com/evise/faces/pages/navigation/NavController.jspx?JRNL_ACR=TACC.

Research Focus articles report on an exciting new paper (or a small group of related papers) in the primary literature. Aim to tell a story and communicate your enthusiasm for the subject. Please start with some brief background, and alert the reader to the significance of the new paper before the end of the first paragraph. Describe the importance of the paper, setting it in context, and conclude briefly with prospects for the future (i.e. what research now needs to be done). End the article with a clear take-home message. The focus should remain on the ‘target’ paper and its implications – Research Focus articles should never be written as a mini-review and should not be used to promote your own work or introduce new data, hypotheses and models. Constructive criticism is appropriate but this section is about highlighting papers that have a significant impact on the field - if you find yourself being too critical, the paper is probably not suitable for this section.

Our audience ranges from student to professor, and so articles must be accessible to a wide readership. Please avoid jargon, but do not oversimplify – be accurate and precise throughout. Use sections and subheadings to lead your reader through the discussion.

Length • 1000 words, 10 references, two figures/boxes/tables total. If you find you are exceeding these limits, you are trying to be too comprehensive: prune accordingly – you will always be asked to reduce the text if you exceed these limits.

Abstract • 75–100 words. Please explicitly mention the new paper(s) and their significance. • Do not include reference numbers in the abstract.

Figures (optional) • Should always have a short, explanatory title (as well as legend). • Legends must fully explain the figure without reference to the text.

Tables (optional) • Require a single-sentence title but no legend.

Text Boxes (optional) • Ideal for providing explanations of basic concepts or theories, giving detailed mechanisms or discussing case studies. • Text Boxes can occasionally contain small figures and tables. • 400 words max per Box (references to be listed in main reference list only: see checklist).

Authorship • The ‘target paper’ described must not be your own or that of your close associates.

Peer review • TACC is a peer-reviewed journal. Manuscripts that fail to meet our criteria for scientific content and style may be rejected, but more usually authors are asked to submit a revised version based on referees’ and Editor’s recommendations. Further editing will take place after acceptance.

Deadline • To fulfil its role as a current awareness journal, TACC depends on rapid publication and tight schedules: if you cannot complete your manuscript by the deadline agreed with the Editor, your article may be cancelled. This is most important for Research Focus articles, whose timeliness depends upon rapid publication.
