

Guidelines for submitting proposals for *Annals of Econometrics* Issues

The *Annals of Econometrics* is an integral part of the *Journal of Econometrics*. Each issue of the *Annals* contains articles providing in-depth treatment of important specific topics in theoretical or applied econometrics.

The editorial board welcomes proposals from established econometrician(s) to act as guest editor(s) for an issue of *Annals of Econometrics*. A proposal should:

- (a) focus on a substantive topic;
- (b) contain a brief description and motivation of the topic;
- (c) include a list of potential contributions, including author(s), title and abstract for each;
- (d) include an assessment of the probability that the named authors will submit their articles;
- (e) not include the name of a person in the title.

Agreement for an *Annals* issue does not imply acceptance for publication of any title listed in the proposal; it is expected that each article will be subjected to the same stringent reviewing process as submissions to regular issues of the *Journal of Econometrics*, the intention being to produce an issue of quality equivalent to that of a regular issue. A liaising co-editor will be assigned to oversee each *Annals* issue.
