DESCRIPTION

*Annals of Tourism Research* is a social sciences journal focusing upon academic perspectives on tourism. For the purposes of determining areas of interest, tourism is defined as a global economic activity comprising travel behaviour, the management and marketing activities of service industries that arise to meet consumer demand, the effects of tourism activities on communities and policy and governance at local, national and international levels. While striving for a balance of theory and application, Annals is ultimately dedicated to developing theoretical constructs that span business and the social and behavioural sciences. Disciplinary areas include, but are not limited to: service industries management, marketing science, consumer marketing, decision-making and behaviour, business ethics, economics and forecasting, environment, geography and development, education and knowledge development, political science and administration, consumer-focused psychology, and anthropology and sociology. Its strategies are to invite and encourage offerings from various disciplines; to serve as a forum through which these may interact; and thus to expand frontiers of knowledge in and contribute to the literature on tourism social science from a multidisciplinary perspective.

*Annals of Tourism Research* is the companion journal to *Annals of Tourism Research Empirical Insights*

**Benefits to authors**

We also provide many author benefits, such as free PDFs, a liberal copyright policy, special discounts on Elsevier publications and much more. Please click here for more information on our author services.

Please see our [Guide for Authors](https://www.elsevier.com/guides-for-authors) for information on article submission. If you require any further information or help, please visit our [Support Center](https://www.elsevier.com/support).

Check if you are eligible for free gold open access here: [https://www.elsevier.com/open-access/agreements](https://www.elsevier.com/open-access/agreements)

AUDIENCE

Tourism Researchers in Anthropology, Economics, Geography, History, Management Science, Politics, Psychology, Regional Planning and Sociology.

GUIDE FOR AUTHORS

Your Paper Your Way
We now differentiate between the requirements for new and revised submissions. You may choose to submit your manuscript as a single Word or PDF file to be used in the refereeing process. Only when your paper is at the revision stage, will you be requested to put your paper in to a 'correct format' for acceptance and provide the items required for the publication of your article.
To find out more, please visit the Preparation section below.

INTRODUCTION
Annals of Tourism Research is a social sciences journal focusing on academic perspectives on tourism. While striving for a balance of theory and application, Annals ultimately aims to develop theoretical constructs and new approaches, which advance our understanding of tourism as a field and practice. Submissions must fall with the aims and scope of the journal.

Annals invites and encourages research from various disciplines, to provide a forum through which these different disciplinary perspectives interact, and thus to expand the frontiers of knowledge by contributing to the literature on tourism social science. Papers on anthropological, business, economic, educational, environmental, geographic, historical, political, psychological, philosophical, religious, sociological, inter alia aspects of tourism (including conceptual essays, case studies, as well as empirical studies) may be submitted.

Papers that take a social science perspective on matters related to tourism from the other branches of science (cross-disciplinary approaches) are welcome. Purely descriptive research, which does not contribute to the development of knowledge is not considered suitable.

Annals attracts a broad-based, diverse social science readership. Therefore, manuscripts should be written clearly and communicate specialist technical ideas and material in a way that is intelligible to a broad social science audience. Annals is one of the leading journals in the field and receives over 700 submissions per year. We can typically publish between 80 and 100 and so there is inevitably a high rejection rate. Annals operates on a highly devolved structure of editorial work: around 100 Associate Editors represent the diversity of the social sciences approach to tourism studies. All manuscripts received by the journal are initially evaluated by the Editors-in-Chief to decide whether they have the potential to meet the high standards required to be published.

Editorial process
At this stage, about 60% of submissions are rejected. Once through this initial process, manuscripts are allocated to an Associate Editor who is an expert on the topic, field or methodology of the piece. Associate Editors evaluate the paper themselves, and either 'desk reject' (accounting for a further 20% rejections) or decide to handle the review process until a final decision is made. Peer review operates on a double blind process, whereby at least three expert reviewers are typically assigned to evaluate the work.

Publishing criteria.
Annals is the social science journal in tourism. The quality standards of the journal are that papers must be of publishable standard or exceptional merit. These are defined as follows: Of exceptional merit: Demonstrates a level of significance, rigor and originality that positions it amongst leading works in tourism and the social sciences. Makes a significant or substantial contribution to theory, knowledge, policy or practice in tourism and is likely to become a primary point of reference in tourism research. Of publishable standard: Demonstrates a level of significance, rigor and originality that meets international standards of excellence. Enhances theory, knowledge, policy or practice of the social science of tourism and is likely to become an important point of reference in tourism research.

Annals seeks to publish papers that can demonstrate:

COURAGEOUSNESS - Annals is the natural home for big new ideas on tourism, within a social science perspective. Manuscripts should have high levels of originality in conceptualisation or methodological design.
CREDIBILITY - Research published in Annals, irrespective of the discipline or underlying paradigm, must be implemented at the highest standards of methodological rigour. The research design must ensure that the conclusions are verifiable and trustworthy.

RELEVANCE - Annals encourages research that makes an impact on defined communities of interest - the academy, policy makers, the tourism industry or a local population. The relevance of the research should be immediately evident and communities of interest should be explicitly referenced in the article.

READABILITY - Annals papers should use the clearest possible language to communicate (see the Plain English Campaign's guide at http://www.plainenglish.co.uk/files/howto.pdf). Authors should avoid academic language that prevents ready understanding of the key findings to be grasped by a multidisciplinary audience, or that prevents an understanding of how the results might benefit society (see Dolnicar, S. & Chapple, A. (2015) The Readability of Articles in Tourism Journals. Annals of Tourism Research, 52: 161-179). However, articles should be written to the highest standards of English language expression, grammar and syntax. Authors for whom English is not a first language are strongly advised to have their work read by a native English speaker or a professional proofreading service.

WELL ILLUSTRATED - Annals papers should, wherever possible, express the key findings in graphs and figures. Graphs and figures help communicate complex content.

TRANSFERABILITY - Annals welcomes and expects that researchers make their data and methods available to future researchers as supplementary files.

Types of article
Full papers based on empirical research, conceptual essays, review articles. Research notes. Commentaries and rejoinders. Full research articles.

Articles can be empirically based or conceptual papers, normally of between 6-10,000 words in length (including tables, figures and references). Whilst there is no fixed lower word limit, the absolute maximum number of words for published articles is 10,000 words (inc tables, etc). The research should be from a social science perspective underpinned by any paradigm, be it qualitative, quantitative, Conceptual or Economics. Annals views the social sciences as disciplines and fields contributing to our understanding of how human behaviour and society shape the world around us. Articles that intersect the humanities and or other sciences with the social sciences are encouraged. Research Notes.

Research Notes (RN) are not mini-papers, they are short communications on a research theme, topic or development in theory or method (a maximum 2,000 words in length inc tables, figures and references). Research notes allow space for authors to develop or apply theories from other fields which can be taken up by future researchers in tourism, they may be used to report on preliminary findings, develop hypotheses, and challenge established approaches/research findings. They may test propositions or hypotheses; apply new models and tools to tourism from other fields, promote multidisciplinary investigation in tourism; provide updates on-going longitudinal research; report on issues arising in the tourism industry around the world which may be overlooked (based on empirical evidence). The essence lies in the flow and in the convincing statement of cutting edge questions and answers/suggestions for future research. Commentaries and rejoinders.

A commentary is a comment on a newly published article (a max of 3000 words, inc references and figures etc). A commentary might be solicited by the Editors in Chief or submitted by an author(s) who has a strong opinion about a recently published article in the journal. However, the author ought to have deep expertise and knowledge of the topic. A commentary article does not involve original research, but should be grounded in social science theory.

Contact details for submission
Submission address
Please submit your article via https://www.editorialmanager.com/atr/default.aspx
If you are experiencing problems with the online submission, please contact the journal manager at please visit our Support Center for further instructions.
Submission checklist
Submission is online and you will be guided stepwise through the creation and uploading of your files. All communication, including notification of the Editor's decision and requests for revision, takes place by e-mail. When submitting a manuscript to the Elsevier Editorial System, authors need to supply/select the following:
Article Type (Full research article, Research Note, Commentary)
Full Title
Author(s) details
Article type (Qualitative, Quantitative, Conceptual, Economics)
Abstract
Keywords
Highlights
Classification: This records the discipline/method used.
Confirm responses to questions on: submission only to Annals, word count of your article, acknowledgements, data in brief submission, and contributions of each author to the article.

Comments you wish to make to the Journal Office.

Please note that an editable file is needed for publication purposes after acceptance, and we ask that you submit source files in the case that your manuscript is accepted.

Once the uploading is completed, the system automatically generates an electronic PDF proof, which is then used for reviewing once approved and submitted to the journal by the author.

We strongly suggest you regularly check your spam folder for EM notifications. Update your 'Safe Senders' list to ensure that emails from EM are not filtered into your spam folder.

All manuscripts are subject to an initial editorial screening for adherence to the journal style, for anonymity, and for correct use of English (The Technical check). As a result of this your paper will be either accepted for further consideration or returned for revision. We aim to process each manuscript in a timely manner. If authors have not received an outcome from a first submission within 60 days, they should contact the journal manager.

BEFORE YOU BEGIN
Ethics in publishing
Please see Elsevier information page: https://www.elsevier.com/authors/journal-authors/policies-and-ethics

Declaration of interest
All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential competing interests include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. Authors must disclose any interests in two places: 1. A summary declaration of interest statement in the title page file (if double anonymized) or the manuscript file (if single anonymized). If there are no interests to declare then please state this: 'Declarations of interest: none'. 2. Detailed disclosures as part of a separate Declaration of Interest form, which forms part of the journal's official records. It is important for potential interests to be declared in both places and that the information matches. More information.

Declaration of generative AI in scientific writing
The below guidance only refers to the writing process, and not to the use of AI tools to analyse and draw insights from data as part of the research process.

Where authors use generative artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should only use these technologies to improve readability and language. Applying the technology should be done with human oversight and control, and authors should carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or biased. AI and AI-assisted technologies should not be listed as an author or co-author, or be cited as an author. Authorship implies responsibilities and tasks that can only be attributed to and performed by humans, as outlined in Elsevier’s AI policy for authors.
Authors should disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

**Disclosure instructions**
Authors must disclose the use of generative AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in the core manuscript file, before the References list. The statement should be placed in a new section entitled ‘Declaration of Generative AI and AI-assisted technologies in the writing process’.

**Statement:** During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.

This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, there is no need to add a statement.

**Submission declaration**
It is our policy to publish new and original work. Text copied from copyrighted works from third parties, even in an introduction, should never be used without clearly identifying the other source (either by quotations or indentations). Every paper should present some novelty and new results in the form of a unique paper written in an author's own words. Unless a legitimate explanation is received for the large amount of textual overlap between the submitted paper and the abovementioned previously published work(s), this paper will not be reconsidered for publication.

We use CrossCheck powered by iThenticate software to check the originality of manuscripts. For more information on CrossCheck visit their website at [http://www.crossref.org/crosscheck/index.html](http://www.crossref.org/crosscheck/index.html)

Submission of an article implies that the work described has not: been published previously (except in the form of an abstract or as part of a published lecture or academic thesis or as an electronic preprint, see 'Multiple, redundant or concurrent publication' section of our ethics policy - [https://www.elsevier.com/authors/journal-authors/policies-and-ethics](https://www.elsevier.com/authors/journal-authors/policies-and-ethics) - for more information); that it is not under consideration for publication elsewhere; that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out; and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder.

**Use of inclusive language**
Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns ("clinicians, patients/clients") as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. When coding terminology is used, we recommend to avoid offensive or exclusionary terms such as "master", "slave", "blacklist" and " whitelist". We suggest using alternatives that are more appropriate and (self-) explanatory such as "primary", "secondary", "blocklist" and "allowlist". These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

**Reporting sex- and gender-based analyses**

**Reporting guidance**
For research involving or pertaining to humans, animals or eukaryotic cells, investigators should integrate sex and gender-based analyses (SGBA) into their research design according to funder/sponsor requirements and best practices within a field. Authors should address the sex and/or gender dimensions of their research in their article. In cases where they cannot, they should discuss this as a limitation to their research's generalizability. Importantly, authors should explicitly state what definitions of sex and/or gender they are applying to enhance the precision, rigor and reproducibility.
of their research and to avoid ambiguity or conflation of terms and the constructs to which they refer (see Definitions section below). Authors can refer to the Sex and Gender Equity in Research (SAGER) guidelines and the SAGER guidelines checklist. These offer systematic approaches to the use and editorial review of sex and gender information in study design, data analysis, outcome reporting and research interpretation - however, please note there is no single, universally agreed-upon set of guidelines for defining sex and gender.

**Definitions**

Sex generally refers to a set of biological attributes that are associated with physical and physiological features (e.g., chromosomal genotype, hormonal levels, internal and external anatomy). A binary sex categorization (male/female) is usually designated at birth ("sex assigned at birth"), most often based solely on the visible external anatomy of a newborn. Gender generally refers to socially constructed roles, behaviors, and identities of women, men and gender-diverse people that occur in a historical and cultural context and may vary across societies and over time. Gender influences how people view themselves and each other, how they behave and interact and how power is distributed in society. Sex and gender are often incorrectly portrayed as binary (female/male or woman/man) and unchanging whereas these constructs actually exist along a spectrum and include additional sex categorizations and gender identities such as people who are intersex/have differences of sex development (DSD) or identify as non-binary. Moreover, the terms "sex" and "gender" can be ambiguous—thus it is important for authors to define the manner in which they are used. In addition to this definition guidance and the SAGER guidelines, the resources on this page offer further insight around sex and gender in research studies.

**Author contributions**

For transparency, we require corresponding authors to provide co-author contributions to the manuscript using the relevant CRediT roles. The CRediT taxonomy includes 14 different roles describing each contributor’s specific contribution to the scholarly output. The roles are: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; and Writing - review & editing. Note that not all roles may apply to every manuscript, and authors may have contributed through multiple roles. More details and an example.

**Authorship**

Authorship should be limited to those who have made a significant contribution to the conception, design, execution, or interpretation of the reported study. All those who have made significant contributions should be listed as co-authors. Where there are others who have participated in certain substantive aspects of the research project, they should be acknowledged or listed as contributors. The corresponding author should ensure that all appropriate co-authors and no inappropriate co-authors are included on the paper, and that all co-authors have seen and approved the final version of the paper and have agreed to its submission for publication.

**Author names**

Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list can only be made during the review and revision process, i.e. prior to receiving notification of acceptance and only if approved by the Editors in Chief. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

**Article transfer service**

This journal uses the Elsevier Article Transfer Service to find the best home for your manuscript. This means that if an editor feels your manuscript is more suitable for an alternative journal, you might be asked to consider transferring the manuscript to such a journal. The recommendation might be provided by a Journal Editor, a dedicated Scientific Managing Editor, a tool assisted recommendation, or a combination. If you agree, your manuscript will be transferred, though you will have the opportunity to make changes to the manuscript before the submission is complete. Please note that your manuscript will be independently reviewed by the new journal. More information.
Copyright
Upon acceptance of an article, authors will be asked to complete a 'Journal Publishing Agreement' (see more information on this). An e-mail will be sent to the corresponding author confirming receipt of the manuscript together with a 'Journal Publishing Agreement' form or a link to the online version of this agreement.

Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution and for all other derivative works, including compilations and translations. If excerpts from other copyrighted works are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has preprinted forms for use by authors in these cases.

For gold open access articles: Upon acceptance of an article, authors will be asked to complete a 'License Agreement' (more information). Permitted third party reuse of gold open access articles is determined by the author's choice of user license.

Author rights
As an author you (or your employer or institution) have certain rights to reuse your work. More information.

Elsevier supports responsible sharing
Find out how you can share your research published in Elsevier journals.

Role of the funding source
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement, it is recommended to state this.

Open access
Please visit our Open Access page for more information about open access publishing in this journal.

Elsevier Researcher Academy
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

Submission
Submission to this journal proceeds totally online and you will be guided stepwise through the creation and uploading of your files. The system automatically converts source files to a single PDF file of the article, which is used in the peer-review process. Please note that even though manuscript source files are converted to PDF files at submission for the review process, these source files are needed for further processing after acceptance. All correspondence, including notification of the Editor's decision and requests for revision, takes place by e-mail removing the need for a paper trail.

When submitting a manuscript to the Elsevier Editorial System, authors need to supply/select the following:
• Article Type
• Full Title
• Author(s) details
• Abstract
• Keywords
• Classification: This records the discipline / method used.
• Other Comments
• Attach Main Files:
  o Author Bio: This should include the name(s), the postal/email address of the first author, and a very brief statement about the research interest(s) of the author(s). Its length, whether for single or for all co-authors, must be no more than 75 words in total.
  o Title page
Manuscript (without author details, affiliations and acknowledgements): This should exclude any material that would reveal the identity of the author(s).

Acknowledgement

CRediT author statement

Figures

Tables

Please note that an editable file is needed for publication purposes after acceptance, and we ask that you submit source files in the case that your manuscript is accepted.

Once the uploading is completed, the system automatically generates an electronic PDF proof, which is then used for reviewing once approved and submitted to the journal by the author. All correspondence, including the editor's decision and request for revisions, will be by e-mail to the corresponding author of the paper.

We strongly suggest you regularly check your spam folder for Editorial Manager notifications. Update your 'Safe Senders' list to ensure that emails from Editorial Manager are not filtered into your spam folder.

All manuscripts are subject to an initial editorial screening for adherence to the journal style, for anonymity, and for correct use of English. As a result of this your paper will be either accepted for further consideration or returned for revision.

Submission address
Please submit your article via https://www.editorialmanager.com/atr/default.aspx

PREPARATION

Queries
For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

Preparation
We request you to prepare your manuscript and other text files in the following way:
Margins are set to 2.5 cms all around.
Please include page numbers on the manuscript file in the bottom left hand side of the page.
Single line spacing. Left justified, with ragged edge on the right hand side.
Spelling is in American or English spelling (not a combination of both).
Paragraphs should be no more than around 15 lines long, and ideally between 125 and 200 words.
Footnotes and endnotes are not encouraged, although they may be used in exceptional circumstances.
All references must be mentioned in the Reference List and cited in the text, and vice versa.
Acronyms are only allowed in the following circumstances: where they represent universally recognised organisations, e.g. UNWTO, NATO, or internationally recognised classifications such as ISO, GDP, or for well recognised scientific methodological terms such as ANOVA, LISREL, PLS and so on. Acronyms are not allowed for field specific terms in any circumstances.

Word processing software
You must provide us with an editable file of the entire article. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). See also the section on Electronic artwork. To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

Reference formatting
Reference style

Peer review
This journal operates a double anonymized review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision
is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal’s usual procedures, with peer review handled independently of the relevant editor and their research groups. More information on types of peer review.

**Double anonymized review**

This journal uses double anonymized review, which means the identities of the authors are concealed from the reviewers, and vice versa. More information is available on our website. To facilitate this, please include the following separately:

*Title page (with author details):* This should include the title, authors' names, affiliations, acknowledgements and any Declaration of Interest statement, and a complete address for the corresponding author including an e-mail address.

*Anonymized manuscript (no author details):* The main body of the paper (including the references, figures, tables and any acknowledgements) should not include any identifying information, such as the authors' names or affiliations.

**REVISED SUBMISSIONS**

**Use of word processing software**

Regardless of the file format of the original submission, at revision you must provide us with an editable file of the entire article. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). See also the section on Electronic artwork.

To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

**Article structure**

1 YOUR MANUSCRIPT FOR SUBMISSION FOLLOWING THESE STYLE AND FORMATTING GUIDELINES.

You will be asked to upload the following files:

- **Cover Letter:** (optional)
- **Title page:** Must include;
  a. Title (maximum 56 characters inc spaces. Longer titles may be accommodated in a title: subtitle structure),
  b. author names and affiliations and e-mail address of each author (indicating the corresponding author)
  c. Optional to include separate files for (between 110 and 120 words)
  d. Keywords (maximum 6).
  e. Short Author Bios: This should include a very brief statement about the research interest(s) of the author(s). Its length, whether for single or for all co-authors, must be no more than 75 words in total.
- **Manuscript:** must include: title, keywords and manuscript, including tables and figures, and references(without author details, affiliations and acknowledgements): This should exclude any material that would reveal the identity of the author(s).

Manuscript must by formatted as follows:

- **INTRODUCTION** (IN UPPER CASE for a level 1 heading).
- **Main body of the paper,** headed with appropriate section headings (in UPPER CASE as a level 1 heading, additional levels should be in lower case and italics to denote a sub-section/level 2 heading). Headings should capture the theme/scope/nature of the paper, the methodology or data and methods, the findings and discussion etc as appropriate.
- **CONCLUSIONS**
- **REFERENCES**
- **DECLARATION OF INTEREST** (Only for revised submissions)

Where it is not possible to embed figures or tables in the manuscript text due to file-type or size reasons, an option exists to include separate files for:

- **Figures:** 1 file for all figures, presented in the order in which they appear in the manuscript, numbered and captioned. Include a page break between each figure in the file.
- **Tables:** 1 file for all tables, presented in order, and numbered and captioned. Include a page break between each table in the file.
Subdivision - numbered sections
Divide your article into clearly defined and numbered sections. Subsections should be numbered 1.1 (then 1.1.1, 1.1.2, ...), 1.2, etc. (the abstract is not included in section numbering). Use this numbering also for internal cross-referencing: do not just refer to 'the text'. Any subsection may be given a brief heading. Each heading should appear on its own separate line.

Introduction
The heading for this section is simply INTRODUCTION (IN UPPER CASE).
- The purpose of this section is to set the stage for the main discussion.
- Annals prefers that this section ends by stating the purpose of the research/paper, but without outlining what sequentially will follow.
- If the introduction is short, it appears as one undivided piece. A long introduction of more than 1,500 words can be subdivided. In such a case, the subtitles are in Title Case Format (in italics, but not bold).
Example:

INTRODUCTION (this is a Level 1 heading)

Subheading in Italics (this is a Level 2 heading)

Next Subheading in Italics (another Level 2 heading)

Et cetera (but no Level 3 headings can be accommodated in INTRODUCTION)

Material and methods
- This is the main body of the paper, headed with a section heading capturing the theme/scope/nature of the paper, ALL IN UPPER CASE. Often this heading is somewhat similar to the article title itself.
- The opening discussion begins immediately after the section heading (without a Level 2 subheading intervening). This may include a literature review, if that is not already covered in INTRODUCTION. As much as possible, please use present tense (not past tense) for the literature review.
- The study methodology, if applicable, is then introduced, titled with a Level 2 heading: Study Methods (in italics).
- Then the paper proceeds to discuss study findings and their theoretical and practical applications. The discussion in this section is Subtitled as Appropriate (again in a Level 2 heading, in italics).
- In general, this is how this section is headed/subheaded:

THEMATICALLY APPROPRIATE HEADING (this is the Level 1 heading, in all cap letters, not bold)

Subheading in Italics (this is a Level 2 heading, in italics, not bold)

Subheading in Italics. Et cetera (again a Level 2 heading, in italics, not bold)

All subheadings (Level 2) appear in the same fashion, with no further distinction/variation allowed.

If any of the above (Level 2) subheaded parts must in turn be subdivided, then this format should be used:

Subheading in Italics (Level 2)

This begins with one or more paragraphs of discussion . . . . and then next levels' subheadings are introduced: Sub-subheading in Italics (Level 3). The concept of carrying capacity suggests that in the case of . . . .

NB This is a run-on subheading; that is, the text begins on the same line as its Level 3 heading. Short sections of one or two paragraphs should not have sub-headings or sub-subheadings.

Annals will not accommodate additional headings beyond the Level 3.

Conclusions
- This section, headed simply CONCLUSION (a Level 1 heading), can begin with a restatement of the research problem, followed by a summary of the research conducted and the findings.
- It then proceeds to make concluding remarks, offering insightful comments on the research theme, commenting on the contributions that the study makes to the formation of knowledge in this field, even also suggesting research themes/challenges in years ahead.
• To do justice to the study, this section should not be limited to one or two paragraphs. Its significance/contribution deserves to be insightfully featured here, including remarks which had they been added to the earlier sections would have been premature.
• If the CONCLUSION section is longer than 1,000 words (an average length), one may choose to subdivide it into appropriate Subheadings in Italics, similar to the INTRODUCTION format, above.

Essential title page information
• **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
• **Author names and affiliations.** Where the family name may be ambiguous (e.g., a double name), please indicate this clearly. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name, and, if available, the e-mail address of each author.
• **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. **Ensure that telephone and fax numbers (with country and area code) are provided in addition to the e-mail address and the complete postal address.**
• **Present/permanent address.** If an author has moved since the work described in the article was done, or was visiting at the time, a "Present address" (or "Permanent address") may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

Article Title
The article title (all in UPPER CASE), must be maximum of 52 characters (including blank spaces), with no word hyphenated from the first to the second line. It is also possible to opt for the title: subtitle format. That is, THE TITLE ALL IN UPPER CASE: The Subtitle in Title Case.

Highlights
Highlights are mandatory for this journal as they help increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

Abstract
The abstract must be able to stand alone and be between 110-120 words. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s). Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself. Abstract is mandatory only for Full research articles.

Graphical abstract
Although a graphical abstract is optional, its use is encouraged as it draws more attention to the online article. The graphical abstract should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: Please provide an image with a minimum of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. You can view Example Graphical Abstracts on our information site.

Keywords
Immediately after the abstract, provide a maximum of 6 keywords, using American or English spelling (not a mixture of both) and avoiding general and plural terms and multiple concepts (avoid, for example, "and", "of"). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

Acknowledgements
• To protect the anonymity of the review process, no acknowledgments are included in the paper. If eventually accepted for publication, an appropriate format will be suggested at that point.
Formatting of funding sources
List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, it is recommended to include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Footnotes
Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors build footnotes into the text, and this feature may be used. Should this not be the case, indicate the position of footnotes in the text and present the footnotes themselves separately at the end of the article.

Artwork
Electronic artwork
General points
- Make sure you use uniform lettering and sizing of your original artwork.
- Preferred fonts: Arial (or Helvetica), Times New Roman (or Times), Symbol, Courier.
- Number the illustrations according to their sequence in the text.
- Use a logical naming convention for your artwork files.
- Indicate per figure if it is a single, 1.5 or 2-column fitting image.
- For Word submissions only, you may still provide figures and their captions, and tables within a single file at the revision stage.
- Please note that individual figure files larger than 10 MB must be provided in separate source files.

A detailed guide on electronic artwork is available.

You are urged to visit this site; some excerpts from the detailed information are given here.

Formats
Regardless of the application used, when your electronic artwork is finalized, please 'save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):
- EPS (or PDF): Vector drawings. Embed the font or save the text as 'graphics'.
- TIFF (or JPEG): Color or grayscale photographs (halftones): always use a minimum of 300 dpi.
- TIFF (or JPEG): Bitmapmed line drawings: use a minimum of 1000 dpi.
- TIFF (or JPEG): Combinations bitmapped line/half-tone (color or grayscale): a minimum of 500 dpi is required.

Please do not:
- Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); the resolution is too low.
- Supply files that are too low in resolution.
- Submit graphics that are disproportionately large for the content.

Color artwork
Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF), or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these figures will appear in color online (e.g., ScienceDirect and other sites) regardless of whether or not these illustrations are reproduced in color in the printed version. For color reproduction in print, you will receive information regarding the costs from Elsevier after receipt of your accepted article. Please indicate your preference for color: in print or online only. Further information on the preparation of electronic artwork.
Figure captions
Ensure that each illustration has a caption. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

Tables
• The data in tables should be presented in columns with nonsignificant decimal places omitted. All table columns must have extremely brief headings.
• Clean and uncrowded tables and figures are sought. Notes and comments, including references, are incorporated in the paper text, where the table or figure is first mentioned. If any remain, they are "telegraphically" footnoted, using alphabetic superscripts (not asterisks). References, if not already in the text, take this format: (Smith 2006:207). All such references are also included fully in the reference list. Tables and figures generated by the author need not be sourced. Proof of permission to reproduce previously published material must be supplied with the paper.
• Tables should not be boxed and gridded. No vertical bars can be added and the use of horizontal bars should be limited to 3 or 4, to mark the table heading and its end. See recent issues of Annals for examples.

Citation in text
The format for making citations in the text is as follows:
Single reference: ... Smith (2005) suggests that .... Or it is argued that ... (Smith, 2006). Multiple references: ... (Cohen, 2006; Harrison, 1999, 2005; Wilkinson, 2006). Please note that authors in this situation appear in alphabetical order. Also note the use of punctuation and spacing. Page numbers should be given when using specific points from a paper, including direct quotations or referring to a given part of it: ... (Dann, 2004, p. 44). This reference appears at the end of the quotation. Use double quotation marks to enclose quotations of less than 40 words. These are included in the running text. Longer quotations (40 words or longer) are presented as separate blocks of text, indented 1.3 cms on both margins, without quotation marks and ending with the reference: ... (2004, p. 37). Multi-author sources:
Two authors: Cite both names throughout.
Three to five authors: When cited first in the paper, these should name all co-authors, for example (Smith, Brown, Johnson & Clark, 2005); thereafter, the last name of the first author, followed with et al. (Smith et al., 2005). Please note that et al. is followed by a period but is not italicised.
Works with six or more authors: Cite the surname of the first author followed by et al. for all citations. References to personal communication appear in parentheses: ... (J. Jafari, personal communication, November 10, 2008) and are not included in the reference list.

Web references
As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

Data references
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

Preprint references
Where a preprint has subsequently become available as a peer-reviewed publication, the formal publication should be used as the reference. If there are preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published, these may be referenced. Preprints should be clearly marked as such, for example by including the word preprint, or the name of the preprint server, as part of the reference. The preprint DOI should also be provided.

Reference management software
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal’s style. If no template is yet available for this journal,
please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.

Reference style

The format for making references in the text is as follows:
• Single reference: ... Smith (2005) suggests that .... Or it is argued that ... (Smith, 2006).
• Multiple references: ... (Cohen, 2006; Harrison, 1999, 2005; Wilkinson, 2006). Please note that authors in this situation appear in alphabetical order (also note the use of punctuation and spacing).
• Page numbers should be given when using specific points from a paper, including direct quotations or referring to a given part of it: ... (Dann, 2004, p. 44). This reference appears at the end of the quotation.
• Use double quotation marks to enclose quotations of less than 40 words. These are included in the running text.
• Longer quotations (40 words or longer) are presented as separate blocks of text, indented 1.3 cms. on both margins, without quotation marks and ending with the reference: ... (2004, p. 37).
• Multi-author sources:
  Two authors: Cite both names throughout.
  Three to five authors: When cited first in the paper, these should name all co-authors, for example (Smith, Brown, Johnson & Clark, 2005); thereafter, the last name of the first author, followed with et al. (Smith et al., 2005). Please note that et al. is followed by a period but is not italicised.
  Works with six or more authors: Cite the surname of the first author followed by et al. for all citations.
• References to personal communication appear in parentheses: ... (J. Jafari, personal communication, November 10, 2008) and are not included in the reference list.

The heading for this bibliographic list is simply REFERENCES. All entries under this heading appear in alphabetic order of authors. Responsibility for the accuracy of bibliographic citations lies entirely with the authors.

Journal Article
If a journal is paginated by issue please include its issue number as well:
For multiple authors:

Book

Edited Book

Chapter in Edited Book

More than one contribution by the same author
Arrange in date order, including author name for each entry.
Author has two or more publications in the same year
If an author has two or more publications in the same year, they are distinguished by placing a, b, etc. after the year. For example, 2008a or 2008b, and they are referred to accordingly in the text.

Doctoral Dissertation

Newspapers

Internet

Personal Communications
These are not listed in the reference list (see above, under Textual Citation).

Data visualization
Include interactive data visualizations in your publication and let your readers interact and engage more closely with your research. Follow the instructions here to find out about available data visualization options and how to include them with your article.

Supplementary material
Annals requires researchers to make their questionnaires, interview protocols or other such supporting materials available to future researchers as supplementary files. Other supplementary material such as applications, images and sound clips, can be published with your article to enhance it. Submitted supplementary items are published exactly as they are received (Excel or PowerPoint files will appear as such online). Please submit your material together with the article and supply a concise, descriptive caption for each supplementary file. If you wish to make changes to supplementary material during any stage of the process, please make sure to provide an updated file. Do not annotate any corrections on a previous version. Please switch off the ‘Track Changes’ option in Microsoft Office files as these will appear in the published version.

Research data
This journal encourages and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings, which may also include software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. If you are sharing data in one of these ways, you are encouraged to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

Data linking
If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.

For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.

In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

Research Elements
This journal enables you to publish research objects related to your original research – such as data, methods, protocols, software and hardware – as an additional paper in a Research Elements journal.
Research Elements is a suite of peer-reviewed, open access journals which make your research objects findable, accessible and reusable. Articles place research objects into context by providing detailed descriptions of objects and their application, and linking to the associated original research articles. Research Elements articles can be prepared by you, or by one of your collaborators.

During submission, you will be alerted to the opportunity to prepare and submit a manuscript to one of the Research Elements journals.

More information can be found on the Research Elements page.

Data statement
To foster transparency, we encourage you to state the availability of your data in your submission. This may be a requirement of your funding body or institution. If your data is unavailable to access or unsuitable to post, you will have the opportunity to indicate why during the submission process, for example by stating that the research data is confidential. The statement will appear with your published article on ScienceDirect. For more information, visit the Data Statement page.

Other style guidelines
- Manuscript length: Between 6,000 and 10,000 words for initial submission and revisions (including tables, figures and references).
- Format: Margins 2.5 cms. all around; spacing 1 to 2 lines (tables single).
- Spelling: For the sake of uniformity and consistency, American or English spelling should be used throughout the paper, but not a combination of both.
- Footnotes/endnotes/appendices: None is accommodated in Annals. They must be omitted and their main points briefly stated in the text.

Online proof correction
To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Corresponding authors will receive an e-mail with a link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors. If preferred, you can still choose to annotate and upload your edits on the PDF version. All instructions for proofing will be given in the e-mail we send to authors, including alternative methods to the online version and PDF.

We will do everything possible to get your article published quickly and accurately. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. It is important to ensure that all corrections are sent back to us in one communication. Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

Offprints
The corresponding author will, at no cost, receive a customized Share Link providing 50 days free access to the final published version of the article on ScienceDirect. The Share Link can be used for sharing the article via any communication channel, including email and social media. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Corresponding authors who have published their article gold open access do not receive a Share Link as their final published version of the article is available open access on ScienceDirect and can be shared through the article DOI link.

Additional information
For advice on the many ways to share and promote your article, visit the Elsevier website: https://www.elsevier.com/authors/journal-authors/submit-your-paper/sharing-and-promoting-your-article

AUTHOR INQUIRIES
Visit the Elsevier Support Center to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch.

You can also check the status of your submitted article or find out when your accepted article will be published.
