DESCRIPTION

Archives of Medical Research publishes original peer-reviewed medical research in an attempt to bridge the gaps created by medical specialization. Contributions are grouped into three main categories - biomedical, clinical, and epidemiological. Review articles and preliminary communications will also be considered. As an international publication, the study of diseases is presented from various perspectives to provide the medical community with original investigation from molecular biology to clinical epidemiology within a single publication.

Benefits to authors
We also provide many author benefits, such as free PDFs, a liberal copyright policy, special discounts on Elsevier publications and much more. Please click here for more information on our author services.

Please see our Guide for Authors for information on article submission. If you require any further information or help, please visit our Support Center.

EDITORIAL BOARD

General Director
Celida Duque Molina, Instituto Mexicano del Seguro Social (IMSS), Mexico
Area of expertise: Internal Medicine

Emeritus Editor
Luis Benítez-Bribiesca †
Editor-in-Chief
Mardia López-Alarcón, Instituto Mexicano del Seguro Social (IMSS), Mexico
Area of Expertise: Clinical Research and Nutrition

Associate Editors
Paola García de la Torre, Instituto Mexicano del Seguro Social (IMSS), Mexico
Area of Expertise: Aging and Dementia Biomarkers
Moises Mercado Atri, Instituto Mexicano del Seguro Social (IMSS), Mexico
Area of Expertise: Neuroendocrine Tumors

Managing Editor
Oscar Fuentes-Porragas, Instituto Mexicano del Seguro Social (IMSS), Mexico

Copy Editor
Selene Salas-Lizana, Instituto Mexicano del Seguro Social (IMSS), Mexico

Clinical Statistical Reviewer
José Dario Martínez Ezquerro, Instituto Mexicano del Seguro Social (IMSS), Mexico

Electronic Supporting Staff
Arturo Meza Narvaez, Instituto Mexicano del Seguro Social (IMSS), Mexico

Editorial Board
Carlos A. Aguilar Salinas, Instituto Nacional de la Nutrición Salvador Zubirán, Mexico
Areas of Expertise: Endocrinology, Metabolic Diseases
Thierry Bienvenu, Fédération de Génétique et de Médicine Génomique, France
Areas of Expertise: Genetics and Molecular Biology, Cystic Fibrosis, Diagnostic Tests, Anorexia Nervosa/Eating Disorders
Ernesto Doncel- Pérez, Hospital Nacional de Parapléjicos de Toledo, Spain
Areas of Expertise: Cell and Molecular Biology, Neurogenerative Medical Chemistry, CNS Injury Repair and Guillain-Barré Syndrome Research
José R. Fernández, University of Alabama at Birmingham, Birmingham, Alabama, United States of America
Areas of Expertise: Behavioral Health, Nutrition Education, Population Sciences
Gabriela Gonzalez-Mariscal, CINVESTAV-IPN, Mexico
Area of Expertise: Reproductive Physiology
Jian-guo Jiang, Zhejiang Academy of Medical Sciences, Hangzhou, China
Areas of Expertise: Food and Bioengineering and cancer
Ricardo R.B. Maccioni, Universidad de Chile, Santiago, Chile
Areas of Expertise: Cellular and Molecular Medicine, Alzheimer Disease
Alejandro E. Macias, Universidad de Guanajuato, Mexico
Area of Expertise: Infectious Diseases
Alessandro Madrigal, University College London, United Kingdom
Areas of Expertise: Hematological Cancer, Bone Marrow Transplantation
Leopoldo Santos Argumedo, CINVESTAV- Zacatenco, Mexico
Areas of Expertise: Molecular Biomedicine, Immunology
Ramón Paniagua-Sierra, Instituto Mexicano del Seguro Social (IMSS), Mexico
Area of Expertise: Nephrology
Armando Tovar, Instituto Nacional de Ciencias Médicas y Nutrición Salvador Zubirán, Mexico
Area of Expertise: Nutritional Biochemistry, Nutrigenomics, Gut Microbiota
Niels Wacher Rodarte, Instituto Mexicano del Seguro Social (IMSS), Mexico
Area of Expertise: Epidemiology, Diabetes
Yufang Shi, Shanghai Institute for Biological Sciences, China
Area of Expertise: Understanding the Role of Inflammation in Regeneration

Advisory Board
Jaime Mas-Oliva, Universidad Nacional Autónoma de México, UNAM, Mexico
Hector Mayani Viveros, Oncology Hospital, Mexican Institute of Social Security (IMSS), Mexico
Areas of Expertise: Cancer, Stem Cells, Cell Therapy
Guadalupe Miranda Novales, Pediatric Hospital, Mexican Institute of Social Security (IMSS), Mexico
Area of Expertise: Pediatric Infectology
Vianney Ortiz Navarrete, CINVESTAV-IPN, Tlaxcala, Mexico
Area of Expertise: Immunology
Mario Enrique Rendón Macías, Pan American University, Faculty of Health Sciences, Ciudad de México, Mexico
Areas of Expertise: Epidemiology, Pediatrics
Haydee Rosas Vargas, Instituto Mexicano del Seguro Social (IMSS), Mexico
Areas of Expertise: Genetics, Molecular biology

Ana Carolina Sepúlveda Vildósola, Universidad Nacional Autónoma de México, UNAM, Mexico
Area of Expertise: Pediatrics, Clinical research, Medical education

Javier Torres López, Instituto Mexicano del Seguro Social (IMSS), Mexico
Areas of Expertise: Infectious Diseases, Microbiology, Infection and Cancer, Microbiome

Abraham Majluf Cruz, Instituto Mexicano del Seguro Social (IMSS), Mexico
Areas of Expertise: Hematology, Thrombosis and Hemostasis
GUIDE FOR AUTHORS

Editorial policies

Archives of Medical Research (AMR) is published eight times per year and includes articles covering all areas of medical research relevant to human disease. Articles reporting original research that demonstrate pertinence to human medical investigation are encouraged. AMR does not hold liability for any statements made by the authors.

Manuscripts proficiently drafted in scientific English are accepted from authors in any country and must be exclusively submitted to the Editor-in-chief, Mardia Lopez Alarcon, MD, PhD via Editorial Manager

The Editorial Office of AMR is located at Centro Medico Nacional Siglo XXI, Unidad de Congresos, Bloque B, 4 Piso, Av. Cuauhtemoc #330 Col. Doctores, Alcaldia Cuauhtemoc 06725 CDMX, Mexico. E-mail address: archmedres@elsevier.com.

Once all the Editorial Manager's requirements are fulfilled, the manuscript will be accepted for submission. A letter of acknowledgment of receipt will be automatically sent to the corresponding author, along with an access number that must be used in any communication from then on. After peer review and acceptance, the manuscript production status may be obtained from Elsevier Production Tracking System at: Editorial Manager Manuscript reviewers, to whom we are most grateful for the time and expertise they devote to our peer-review process, will be asked to enter the Editorial Manager for all communications regarding the manuscript.

Preprint Servers

AMR will consider articles previously available as preprints on noncommercial servers, such as ArXiv, bioRxiv, psyArXiv, SocArXiv, engrXiv, and other repositories, for review. Authors may also post the submitted version of their manuscript to noncommercial servers at any time. Authors must update any pre-publication versions with a link to the final published article.

Data Sharing Encouragement

AMR encourages authors to share data and other documents supporting their article's results by archiving them in an appropriate public repository. Authors must include a statement of data accessibility, including a link to the repository they have used so that this statement can be published alongside their paper.

Publication Ethics

AMR adheres to the code of conduct and best practice guidelines for actors (editors, editorial committee, authors, and reviewers) involved in this journal's publication process established by the Committee on Publication Ethics (COPE), available at: COPE, in like manner, the guidelines defined by the International Committee of Medical Journal Editors (ICMJE) are followed, available at: ICMJE. AMR only publishes original works not published anywhere else. All the submissions will be checked for plagiarism and may be rejected on this basis, regardless of their quality.

Retractions and Expressions of concern

Retractions: Articles may be retracted for scientific or ethical reasons. Articles containing seriously flawed or erroneous data, such that their findings and conclusions cannot be relied upon, may be retracted to correct the scientific record. Retractions may be requested by the article's author(s) or by the journal's Associate Editors but are ultimately published at the discretion of the Editor-in-chief. When an article is retracted, a Notice of Retraction will be published; it will contain information about the original article title, a list of authors, and the reason for such retraction. Retracted articles will be accompanied by the corresponding Notice of Retraction and marked as "Retracted."

The article published initially will remain on the Web except in extraordinary circumstances (e.g., when deemed legally necessary or if the availability of the published content poses public health risks). AMR follows the Committee on Publication Ethics (COPE) when considering retractions; for more information, see: Committee on Publication Ethics

Expressions of Concern: AMR follows guidance from the Committee on Publication Ethics (COPE) when considering terms of concern; for more information, see: Committee on Publication Ethics Expressions of concern are published at the discretion of the Editor-in-chief. Upon completion of any related investigation and when a final determination is reached on the outcome of the article, the expression of concern may be replaced with a notice of retraction or correction.
**Natural Products**

Studies that mention the use of natural products must first describe the active compounds and their significant actions, should they be known. All active agents should be sufficiently identified with chemical names, registry numbers, and common names where appropriate. Studies that do not include these information may be rejected without further review. The use of purified agents is encouraged.

**Hybrid Journal**

**AMR** is a hybrid journal, meaning its content can be available via subscription or Open Access (OA). Subscriptions are offered yearly. The annual fee is 192 USD for individuals in the U.S. and 224 USD for individuals outside the U.S. AMR allows also to publish accepted manuscripts in OA. Such articles will be immediately and permanently free for everyone to read and download with permitted reuse. The authors or their research funder must pay an OA publication fee. Please [Open Access Page](https://www.elsevier.com/locate/arcmed) for more information.

**Queries**

For questions about the editorial process (including the status of manuscripts under review) or technical support on submissions, please visit our [Support Center](https://www.elsevier.com/locate/arcmed).

**Online submission**

All the contributions submitted to Archives of Medical Research must be proficiently written in scientific English and sent electronically through the Editorial Manager platform: [Editorial Manager](https://www.elsevier.com/locate/arcmed). Submitted articles should be concise but with sufficient experimental detail to permit a critical appraisal of the work. Unnecessary repetition should be avoided. Responsibility for the accuracy of materials in the manuscripts, including appropriate references to related work, lies entirely with the authors.

**Supplementary material**

Authors may submit supplementary images, tables, figures, and videos to be added online. For further information, please access: [Artwork and Media Instructions](https://www.elsevier.com/locate/arcmed).

**Declaration of generative AI in scientific writing**

The below guidance only refers to the writing process, and not to the use of AI tools to analyse and draw insights from data as part of the research process.

Where authors use generative artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should only use these technologies to improve readability and language. Applying the technology should be done with human oversight and control, and authors should carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or biased. AI and AI-assisted technologies should not be listed as an author or co-author, or be cited as an author. Authorship implies responsibilities and tasks that can only be attributed to and performed by humans, as outlined in Elsevier’s [AI policy for authors](https://www.elsevier.com/locate/arcmed).

Authors should disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

**Disclosure instructions**

Authors must disclose the use of generative AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in the core manuscript file, before the References list. The statement should be placed in a new section entitled ‘Declaration of Generative AI and AI-assisted technologies in the writing process’.

Statement: *During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.*

This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, there is no need to add a statement.

**Editorial review**

**AMR** demands from its Editorial Board, Panel of Reviewers, and authors to ensure the fulfillment of the ethical obligations defined by the Committee on Publication Ethics (COPE), whose guide can be downloaded from: [COPE](https://www.elsevier.com/locate/arcmed)
Authors who submit a paper to AMR must send - in full and in their final version - all documents indicated in the online submission section. Once the editorial team verifies that the submission meets all the requirements, the text will be sent for editorial review, which comprises two stages: 1) checking for plagiarism with the tool approved by the Editorial Committee; if possible plagiarism is detected or reported in a published text, the procedure to follow will be the one defined by the Committee on Publication Ethics available at: Publication Ethics 2) An initial editorial review followed by an opinion, either in-house rejection or submission to peer review. Once the submitted article has passed through this initial editorial review, the corresponding author will be formally notified of the decision. Authors can keep track of the editorial process on the electronic platform. When accepted, it will be published on an "article-release" basis and can be consulted on the Webpage Numbers will be integrated once the amount of manuscripts for each is reached.

Peer-review process  All submitted manuscripts will be evaluated by at least two anonymous experts, either member of the Editorial Board or qualified invited referees. Reviewers and/or Editor's comments and queries will be sent to the corresponding author. The authors must edit and submit the article in a revised form, providing precise details of the changes and responses to these comments. The Editor-in-chief will consider the revised version, and if necessary, by the reviewers before making a final decision. The Editors are entitled to make the changes they deem necessary and to decide the issue in which each article will be published (significant changes will be agreed upon with the corresponding author). Authors must provide the names, addresses, and e-mail addresses of 4-6 unbiased and qualified potential expert reviewers, unrelated to the authors and/or their institutions.

Copyright Upon acceptance of an article, authors will be asked to complete a 'Journal Publishing Agreement' (see more information on this). An e-mail will be sent to the corresponding author confirming receipt of the manuscript together with a 'Journal Publishing Agreement' form or a link to the online version of this agreement.

Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution and for all other derivative works, including compilations and translations. If excerpts from other copyrighted works are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has preprinted forms for use by authors in these cases.

For gold open access articles: Upon acceptance of an article, authors will be asked to complete a 'License Agreement' (more information). Permitted third party reuse of gold open access articles is determined by the author's choice of user license.

Author rights As an author you (or your employer or institution) have certain rights to reuse your work. More information.

Before you begin Ethical responsibilities Protection of human beings and animals. All work using human subjects or animals must be performed in accordance with the ethical standards of the relevant institutional and national committees. Studies involving data on human beings must have the corresponding written informed consent which must be approved by an Ethics Committee of the participant institution, and has to be attached to the documents submitted over the Editorial Manager platform. The authors undertake to follow the ethical regulations of the World Medical Association and the Declaration of Helsinki, available at: Policies. For work using animals, authors are urged to follow the ARRIVE guidelines drawn up by the National Centre for the Replacement, Refinement and Reduction of Animals in Research (NC3RS), available at: National Centre for the Replacement Refinement and Reduction of Animals in Research

Funding The authors must declare the origin of any economic support they have received.

Authorship
AMR follows the requirements established by the Committee of Medical Journal Editors regarding authorship. The list of authors must only include people who intellectually contributed to the development of the work. Support for data gathering or participation in one technique, on their own, are not sufficient criteria to be listed as an author. In case of collective authorship, the name of the drafters or responsible for the work will be included, followed by "and the Group..." when all the group members are considered coauthors of the work. If the group's name is to be included, even though not all the members are considered coauthors, the responsible authors are listed followed by "on behalf of the Group..." or "from the Group...". In any case, the names and institutions of the group members will be included in an annex at the end of the paper. In general, to be considered an author, Archives of Medical Research will take into account the guidelines provided by the Committee of Medical Journal Editors: ICMJE

Conflict of interest

Authors must state explicitly when there is a conflict of interest filling out the required forms. A conflict of interest is considered to be present when the author had or has economic or personal relationships that can be considered a source of bias or influence over the study results. The potential conflict of interest exists regardless of whether the authors consider that such relationships influence or not their criteria. The authors should describe, in the cover letter and in the section for additional information at the Editorial Manager platform, any financial or personal relationship they had or have, at the moment of drafting or submitting the manuscript, with people or institutions and which may give rise to a conflict of interest regarding the manuscript submitted for publication. The declarations will be included in the digital issue. AMR will take into account the recommendations provided by the Committee of Medical Journal Editors about conflicts of interest at https://www.icmje.org/disclosure-of-interest/

Queries

For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

Types of article

Original Articles. These describe the original results of broad appeal with sufficient information to be critically evaluated. AMR will foster contributions that have clinical applications in humans (see Articles in online submission). Review Articles. Upon invitation by the Editor-in-chief, these describe current controversies in a field, critically analyzing in the relevant literature. Specific viewpoints may be included as long as they are adequately substantiated. Their primary purpose is to provide updated information about a topic by an expert in the field (see Review articles in online submission). Preliminary Reports. Brief reports on novel and relevant findings for the medical practice. These contributions are considered for publication based on their novelty, immediacy, importance, and applicability (see Preliminary reports in online submission). Opinion. Articles expressing the author's point of view on a medical topic. Opinion articles are usually invited requests by our Editor in chief or can be submitted as the author's own initiative, but their final acceptance is always an editorial decision (see Opinion in online submission). Letters to the Editor. Letters to the editor should be prompted by recently published articles in AMR (see Letters to the Editor in online submission).

Queries

For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

Manuscript preparation

Assemble the manuscript in this order: Title page, Abstract and Keywords, Text, Acknowledgments, References, Tables, Figure and Illustrations Legends. Prepare the manuscript in word processor using 12 point Times New Roman font, with 1 inch margins all around, flush left margin without paragraph indents, unjustified right margin; this format includes the title page. Do not boldface any information unless it is explained and necessary. Do not center any information.

Required Checklists

A reporting checklists referenced at the Equator Network: Equator Network, depending on the design of the study, must accompany the submission of a manuscript as a supplemental file in the online manuscript submission system. Page and continuous line numbering must be included to indicate where the checklist items are located in your paper. Participant flow charts should be included.
whenever possible, especially accompanying CONSORT, PRISMA, and STROBE checklists. The ARRIVE checklist is appropriate for manuscripts with animal research. If none of the checklists apply to your study, please explain in your cover letter why none is needed.

Original Articles (including systematic reviews/meta-analysis)
May be epidemiological, biomedical, or clinical. Must contain a structured abstract that include: background, aims, methods, results, and conclusions. The Abstract should be written in no more than 250 words, followed by four to six keywords or short phrases for cross-indexing. Refer to the Medical Subject Headings-Annotated Alphabetic List (National Institutes of Health, National Library of Medicine, Library Operations, Medical Subject Headings, Bethesda, MD 20894, USA, National Library of Medicine) for internationally accepted subject headings. Do not cite references. The main text comprises an introduction ending the section with the aim of the study, materials and method, results, discussion and conclusions, declaration of conflicts of interest, acknowledgments, and references.

Epidemiological studies. Include the population sampled (national, regional, or specifically selected group), and indicate if the sample is representative of a national or regional population. If neither, state from which population the sample was drawn, giving details and stating why this group may be significant. If using national or local definitions, a reference to the source showing the cut-off criteria should be provided (also cite this in the Reference list). The number of patients and controls must be indicated as well as the time of data collection.

Biomedical studies. All animal experiments must have been conducted according to ARRIVE guidelines for animal experiments, and the authors should indicate in the manuscript that such procedures have been followed. Follow the link: Equator Network Reporting Guidelines.

Clinical Studies: Clinical trials are encouraged to have been prospectively registered in a public trials registry. The details of this policy are found in "Uniform Requirements for Manuscripts Submitted to Biomedical Journals": ICMJE Authors must follow the CONSORT guidelines for randomized trials, STROBE guidelines for observational studies and PRISMA guidelines for systematic reviews and meta-analyses: Equator Network Reporting Guidelines.

Review articles
Must include an abstract in free format, no longer than 250 words. The main text comprises an introduction, and be subdivided into sections, including discussion and conclusions; declaration of conflicts of interest; acknowledgments and, references. For keywords, tables, figures, and illustrations, follow the criteria indicated at the end of this section. Review articles must be a maximum of 7,000 words and include a minimum of 60 references relevant to the topic.

Preliminary reports
Should include an abstract page in free format, no longer than 250 words. Must be a concise presentations of research results that include sufficient explanation of experimental and methodological data. For keywords, tables, figures, and illustrations follow the criteria indicated at the end of this section. Preliminary reports must be at most 2,500 words long, including all the sections and the legends of tables and figures.

Opinion
It should not exceed 850 words, including references and acknowledgments; but a cover letter and agreement letter must be provided.

Letters to the Editor
Brief communication to comment on a key or a general interest issue regarding a previously published article in the journal, received within 12 weeks of the article publication. Letters to the Editor must include the text of the letter, which can be up to 500 words and up to three bibliographic references. For keywords and figures (two at most), follow the criteria at the end of this section.

Editorial
Usually by invitation, and addressing either a recently published article in AMR or an emergent health-related topic, deemed important by the editorial team. Should be no longer than 1000 words and a maximum of five references.
**Article structure**

**Cover Letter:** Should be addressed to the journal's editor-in-chief. It must include the manuscript title and expressly state that the authors had access to data and analysis and that sponsors (in case of existing) did not influence the results. The letter must mention that the manuscript has not been previously published or simultaneously submitted to any other journal for publication, that all the authors accepted the paper in its present condition and that they agree with what it is expressed in it.

**Agreement Letter:** All the authors must individually complete the agreement letter form, where the ORCID ID will be indicated. If there is a conflict of interest, it must be expressly indicated, as well as the contributions to the manuscript by each author at Credit Author Statement.

**Title page:** indicate the title, which must be no longer than 150 characters, and a running title no longer than 50 characters. Following the title and running title, all author names should be listed without degrees or titles. The authors' full names must be included in the exact order in which they will appear, without using acronyms. **AMR accepts only one corresponding author per article.** The corresponding author must be identified. Affiliations (without street addresses) should be listed below author names, using a superscript letter. The author to whom correspondence should be sent should be listed below the affiliations and include complete name, street address, city, state, country, postal code, and e-mail address. The Editors of Archives of Medical Research reserve the right to modify titles when deemed appropriate.

**Keywords:** indicate up to six words or terms to be used as index terms, separated by semicolons (;). Use terms from the medical subject headings list of: Nih.gov

**Tables and Figures:** No more than eight tables and/or figures will be regularly accepted (exceptions may be discussed). Tables or Figures used from another published source (either exactly or closely adapted) require written permission from the publisher. It is the author's responsibility to obtain this permission upon acceptance of the manuscript by AMR. Elsevier will not publish any material that has been previously published without this permission. Manipulation of images for deception or fraud is considered an ethical abuse and precludes the suspension of authors from publishing again in this journal.

Tables and figures must include their legends. Tables and figures must be sent separately. Be sure that all tables and figures are mentioned in the text. Tables should be formatted in a word processing software and double-spaced. Each table should be included on a separate page. Tables should be self-contained and self-explanatory. Provide a title for each table and use Arabic numerals to cite them throughout the text. Refrain from using vertical grind lines to separate information within the table. Avoid using both tables and graphs to illustrate the same results, and similarly, avoid detailed descriptions of information within the text if that information can be easily observed in the tables and figures. Use superscript letters for tables, figures and legends.

**Illustrations.** Original illustrations should be professionally designed, in two dimensions and submitted with the manuscript in recent software versions. AMR requests only JPEG, EPS, or PDF formats for electronic artwork. Figure size must be at least 8.5 cm (maximum 17.6 cm) in width. The resolution of the jpg images must be at least 300 dpi. Printed color illustrations are at the author's expense and arranged directly with the publisher.

**References:** The accuracy of references is the responsibility of the authors. Take into account the following instructions: Confirm that all references mentioned in the text are presented in the Reference list section at the end of the paper (and vice versa) using the Vancouver format. References cited within text should be shown in Arabic numbers in parentheses and appear before the ending punctuation of the sentence. References are numbered sequentially in the text and must match the in-text citation. List all authors in the case of references with up to 6 authors; in the case of references with more than 6 authors, list only the first 3 followed by et al. References may include only published or "in-press" articles. Works in progress, manuscripts submitted but not yet accepted, unpublished data, and personal communications may only be acknowledged (in parentheses) within the text (including year). Carefully check and correct duplicated references.

**Printed article:** Author(s) or organization. Title of the article. Name of the journal [as referred to in Index Medicus] year; volume (number): initial and final page. DOI may be included: Matoba T, Yasuda S, Kaikita K, et al. Rivaroxaban monotherapy in patients with atrial fibrillation after coronary

Book: Author(s) or organization. Book title. Edition [if it is not the first]. City where it was published: Publisher, year. Williams R, Colagiuri S, Chan J, et al. IDF Atlas 9th Edition 2019

Book in electronic format: Author(s) or organization. Book title. Edition [if it is not the first]. Publisher, year. Internet address at which it can be consulted (URL) or DOI.

Preprint references Where a preprint has subsequently become available as a peer-reviewed publication, the formal publication should be used as the reference. If there are preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published, these may be referenced. Preprints should be clearly marked as such, for example by including the word preprint, or the name of the preprint server, as part of the reference. The preprint DOI should also be provided.
