DESCRIPTION

Chemical Engineering Journal Advances, a partner title to the highly-regarded Chemical Engineering Journal, is a new online only, open access, peer reviewed journal.

Chemical Engineering Journal Advances focuses upon four aspects of Chemical Engineering: Control, Treatment, Remediation of Environmental Hazards; Chemical Reaction Engineering; Environmental Chemical Processes and Engineering; Novel Materials and Nanotechnology Applications.

Control, Treatment, Remediation of Environmental Hazards Separation technology Desalination Advanced oxidation processes Resource Recovery Waste to energy CO2 capture and utilization Membrane science and technology

Environmental Chemical Processes and Engineering Environmental Interfaces Aquatic Chemistry Contaminant Fate and Transport Adsorption Processes Chemical speciation and transformation

ABSTRACTING AND INDEXING

Directory of Open Access Journals (DOAJ)

EDITORIAL BOARD

Editor-in-Chief
Bingcai Pan, Nanjing University, Nanjing, China
Wastewater treatment, Environmental Nanotechnology, Advanced oxidation processes, Adsorption, Analytical methods
Special Issues Editor

Ana Rita Lado Ribeiro, University of Porto Laboratory of Separation and Reaction Engineering Laboratory of Catalysis and Materials, Porto, Portugal
Environmental engineering; Analytical chemistry; Water/wastewater monitoring; Water/wastewater treatment; Advanced oxidation processes.

Associate Editors

Daphne Hermosilla, Polytechnic University of Madrid, Madrid, Spain
Water and wastewater treatment technologies, Advanced oxidation processes, Removal of emerging and priority pollutants, Water reclamation and reuse, Sustainable production

Yang Hou, Zhejiang University, Hangzhou, China
Electrocatalysis, Carbon materials, Catalysts, Photocatalysis, Chemical process

Ana Rita Lado Ribeiro, University of Porto Laboratory of Separation and Reaction Engineering Laboratory of Catalysis and Materials, Porto, Portugal
Environmental engineering; Analytical chemistry; Water/wastewater monitoring; Water/wastewater treatment; Advanced oxidation processes.

Shihong Lin, Vanderbilt University, Nashville, Tennessee, United States of America
Membrane processes, Desalination, Water treatment, Capacitive deionization, Electro dialysis, Membrane distillation, Reverse osmosis/nanofiltration, Materials with special wettability, Nanoparticle fate and transport, Salinity gradient energy,

Dionissios Mantzavinos, University of Patras Department of Chemical Engineering, Patras, Greece
Environmental chemical engineering, Advanced oxidation processes, Wastewater engineering, Applied catalysis

Jieshu Qian, Nanjing University of Science and Technology, Nanjing, China
Water treatment, Functional materials, Nanoconfinement, Advanced oxidation process

Shaobin Wang, The University of Adelaide School of Chemical Engineering and Advanced Materials, Adelaide, South Australia, Australia
Nanoparticles and nanotechnology, Advanced oxidation processes, Air pollution and control, Wastewater treatment technology, Solid waste conversion and treatment

Zimeng Wang, Fudan University, Shanghai, China
Aquatic Chemistry, Soil Biogeochemistry, Redox Chemistry, Biogeochemical Modeling

Editorial Board Members

Rose Amal, University of New South Wales, Sydney, New South Wales, Australia
Photocatalysis, CO2 reduction, VOC control, wastewater treatment, nanomaterials for biosystem, waste biomass to energy

Camila Costa Amorim, Federal University of Minas Gerais School of Engineering, Belo Horizonte, Brazil

Maria G. Antoniou, Cyprus University of Technology Department of Chemical Engineering, Lemesos, Cyprus

Yang Deng, Montclair State University Department of Earth and Environmental Studies, Montclair, New Jersey, United States of America
Innovative Water Treatment and Reuse Processes; Stormwater Treatment; Chemical Oxidation and Reduction; Adsorption Processes; Sustainable Landfill Leachate Management

Maja B. Đolić, University of Belgrade Faculty of Technology and Metallurgy, Beograd, Serbia

Guilherme Luiz Dotto, Federal University of Santa Maria, Department of Chemical Engineering, SANTA MARIA, Brazil
Adsorption/biosorption of contaminants from aqueous solutions, preparation and characterization of biomaterials and nanobiomaterials, wastewater treatment, wastes management, and reuse, drying of biomaterials, statistical optimization, experimental design, response surface methodology, linear and non-linear regression analysis

Changseok Han, INHA University, College of Engineering, Department of Environmental Engineering, Incheon, South Korea
Advanced Oxidation, Water treatment, Contaminants of Emerging Concern, Microplastics, Environmental Nanotechnology

Zhengping Hao, University of Chinese Academic Sciences (UCAS), Research Center for Environmental Material & Pollution Control Technology, Beijing, China
Air pollution control, nano porous materials, green catalysis, absorption/separation, and environmental engineering

Yi Jiang, Hong Kong Polytechnic University, Hong Kong, China
Environmental Nanotechnology, Water Treatment, Environmental Chemistry, Aerosol Science and Technology, Carbon nanomaterials

Gianluca Li Puma, Loughborough University Department of Chemical Engineering, Loughborough, United Kingdom
Photocatalysis, Environmental nanocatalysis, Advanced oxidation processes, Environmental remediation, Solar energy conversion and Photoreaction engineering.

Ruiping Liu, Tsinghua University School of Environment, Beijing, China
Physical-chemical treatment processes for water purification, Arsenic and fluoride pollution control in drinking water, industrial water and water environments, Disposal and reclamation of hazardous liquid wastes, Treatment and disposal of municipal sludge for resources and energy recovery

Ana Lončarić Božić, University of Zagreb Faculty of Chemical Engineering and Technology, Zagreb, Croatia
Water and wastewater treatment, advanced oxidation processes, Fenton processes, Heterogeneous (solar)photocatalysis, Water quality, Emerging and priority pollutants, Microplastics, Toxicity

Miguel Ángel Mueses, University of Cartagena, Photocatalysis and Solar Photoreactors Engineering, Modeling & Applications of Advanced Oxidation Technologies Research Group, Cartagena, Colombia

Maria J. Rivero, University of Canta, ETS de Ingenieros Industriales y de Telecomunicación, Department of Chemical and Biomolecular Engineering, Santander, Spain
Water and wastewater treatment technologies (adsorption, ion exchange, membrane technologies); Advanced oxidation processes (Fenton, photo-Fenton, electrochemical oxidation, photocatalysis); Nanostructured semiconductors for environmental applications; Photocatalytic hydrogen production; Photocatalytic reactors.

Arup Sengupta, Lehigh University, Department of Civil and Environmental Engineering, Bethlehem, Pennsylvania, United States of America
Preparation Characterization and innovative use of Novel adsorbents, Ion exchangers, Reactive Polymers and Specialty membrane in environmental Separation and Control, hybrid Separation Processes

Virender Sharma, Texas A&M University, College Station, Texas, United States of America
Ferrate, Advanced Oxidation Processes, Nanoparticles, Microplastics, Nanopastics

Hongqi Sun, Edith Cowan University, School of Engineering, Joondalup Drive, Australia
Photocatalysis; environmental nanotechnology; membrane catalysis; advanced oxidation processes; solar fuels

Yin Wang, University of Wisconsin-Milwaukee, Milwaukee, Wisconsin, United States of America
Adsorption, PFOS, water treatment, drinking water safety, mineral-water interfaces

Paul Westerhoff, Arizona State University School of Sustainable Engineering and the Built Environment, Tempe, Arizona, United States of America
Drinking water, nanotechnology

Xiaoguang Duan, The University of Adelaide, Adelaide, Australia
Advanced Oxidation Processes, Functional materials, Catalysis, Water treatment, Nanotechnology

Yin Wang, University of Wisconsin-Milwaukee, Milwaukee, Wisconsin, United States of America
Adsorption, PFOS, water treatment, drinking water safety, mineral-water interfaces

Paul Westerhoff, Arizona State University School of Sustainable Engineering and the Built Environment, Tempe, Arizona, United States of America
Drinking water, nanotechnology

Hongqi Sun, Edith Cowan University, School of Engineering, Joondalup Drive, Australia
Photocatalysis; environmental nanotechnology; membrane catalysis; advanced oxidation processes; solar fuels

Yin Wang, University of Wisconsin-Milwaukee, Milwaukee, Wisconsin, United States of America
Adsorption, PFOS, water treatment, drinking water safety, mineral-water interfaces

Paul Westerhoff, Arizona State University School of Sustainable Engineering and the Built Environment, Tempe, Arizona, United States of America
Drinking water, nanotechnology

Xiaoguang Duan, The University of Adelaide, Adelaide, Australia
Advanced Oxidation Processes, Functional materials, Catalysis, Water treatment, Nanotechnology

Early Career Editorial Board

Onur Apul, University of Maine, Orono, Maine, United States of America
Carbon Nanomaterials, Adsorption, Activated Carbon, Nanobubbles, Thermal Regeneration

Hong Chen, Southern University of Science and Technology, Shenzhen, China
Solid Waste Resourciliation, Soil Remediation, Photocatalysis, Eco-materials, Electrochemical Desalination

Xueming Chen, Fuzhou University, Fuzhou, China
Biological wastewater treatment (Mathematical modelling of bioconversion processes, Advanced technologies for nitrogen removal, Biological nutrients removal and recovery from wastewater, Greenhouse gases emissions and mitigation from wastewater management, Membrane-based biofilm technology)

Xiaoguang Duan, The University of Adelaide, Adelaide, Australia
Advanced Oxidation Processes, Functional materials, Catalysis, Water treatment, Nanotechnology
Alicia Garcia-Costa, University of Porto, Porto, Portugal
Advanced Oxidation Processes, Process Intensification, Water and wastewater treatment, Environmental catalysis

Bing Guo, University of Surrey Department of Civil and Environmental Engineering,
Microbial ecology, Antimicrobial resistance, Biofilms, Anaerobic digestion, Nutrients removal and recovery.

Chi He, Xi'an Jiaotong University, Xi'an, China
Nano-functional materials, Volatile Organic Compounds, Environmental catalysis, Air pollution remediation, Heterogeneous reaction kinetics

Yuxiong Huang, Tsinghua University, Tsinghua Shenzhen International Graduate School, Division of Energy & Environment, Shenzhen, China
Environmental Nanotechnology, Water Treatment, Environmental Analytical Chemistry, Surface and Interfacial Engineering, Emerging Contaminants.

Piran Kidambi, Vanderbilt University Department of Chemical and Biomolecular Engineering, Nashville, Tennessee, United States of America
Nanotechnology, Atomically thin two dimensional 2D materials, Graphene membranes, Process Engineering, In-situ metrology

Chun-Yu Lai, The University of Queensland Advanced Water Management Centre, St.Lucia, Queensland, Australia
Biofilm, Methane, Bioreduction, Biogas up-grading, Biofuel production

Zhongjian Li, Zhejiang University, Hangzhou, China
Wastewater Treatment, Bioelectrochemical Technology, Advanced Oxidation, CO2 Utilization

Dongfeng Liu, University of Science and Technology of China, Hefei, China
Resource Recovery, Waste to energy, Fuel-cells, Contaminant Fate and Transport, Environmental Nanotechnology

Patrick Loulergue, Rennes 1 University, Rennes, France
Sustainable processes, Membrane filtration, Membrane distillation, Membrane materials, Biopolymers

Jinming Luo, Shanghai Jiao Tong University School of Environmental Science and Engineering, Shanghai, China
Water Treatment, Environmental Functional Materials, Heavy Metal Removal/Recovery

Yingqun Ma, Xi'an Jiaotong University, Xi'an, China
Solid waste management, Wastewater treatment, Biological processes, Solid waste conversion and treatment, Process integration.

Javier Moreno-Andrés, University of Cadiz, Cadiz, Spain
Disinfection, Regrowth, UV-based inactivation, Photochemistry, Marine environment

Sergio Obregón, Autonomous University of Nuevo Leon, San Nicolas De Los Garza, Mexico
Photocatalysis, hydrogen, TiO2, nanomaterials, up-conversion

Santiago Romero-Vargas Castrillon, The University of Edinburgh School of Engineering, Edinburgh, United Kingdom
Colloid and interface science, Membranes, Nanoscale transport, Molecular simulation

Sergio Vernuccio, The University of Sheffield Department of Chemical and Biological Engineering, Sheffield, United Kingdom
Reaction Engineering, Catalysis, Kinetic Mechanisms, Microkinetic Modeling, Process Intensification

Dengjun Wang, Auburn University, Auburn, Alabama, United States of America
Environmental Nanotechnology, Sustainable Agriculture, Fate and Transport, Environmental Remediation, and Aquatic Chemistry

Jun Wang, Nanchang University, Nanchang, China
Gas-mixture separation, Adsorption, Porous materials, Adsorbents, Electro catalysis

Zhangxin Wang, Guangdong University of Technology - Panyu Campus, Guangzhou, China
Membrane separations, wastewater treatment, desalination, resource recovery, water-energy nexus

Wulin Yang, Peking University, Beijing, China
Microbial electrochemical technology, Electro-membrane processes, Resource recovery, Carbon nanomaterials, Water-energy nexus

Lijuan Zhang, Peking University Shenzhen Graduate School, Nanshan, China
Wastewater, Emerging contaminants, Microorganisms, Metabolomics, Bio-electrochemistry

Wenxiang Zhang, University of Macau, Department of Civil Engineering and Environment, Hengqin Island, Macao, China
Membrane bioreactor (MBR), biological water treatment, membrane separation materials, membrane fouling control, sludge disposal
GUIDE FOR AUTHORS

Introduction
Submission of Papers  Manuscripts should be submitted to the Editor-in Chief, Dr Bingcai Pan.

Types of papers
The editors make every effort to ensure that manuscripts are fairly and independently reviewed. Submissions which describe novel theory and its application to practice are welcome, as are those which illustrate the transfer of techniques from other disciplines. Reports of carefully executed experimental work which is soundly interpreted are also welcome. Manuscripts of routine studies, however, presenting experimental data but without any significant new interpretation or novelty, or that are very specific and applied in their scope, will be rejected by the editors as "lacking in novel content".

Original papers - these should be complete and authoritative accounts of work, which has a special significance and must be presented clearly and concisely.

Review articles - We expect our reviews to be authoritative pieces of work, aimed at describing recent progress in relevant research areas within the scope of the Journal, with the non-expert reader in mind. Rather than attempting a thorough review of the field, authors should concentrate on essential developments, to give a balanced account of the state of the art, discuss key results and provide insight on the perspectives for that research field. Prospective authors of a review article may consult with the Review Editor or one of the other Editors to check the suitability of their topic and material before submitting their review. To keep the review manuscripts concise and readable, as a general rule they should be limited to 10,000 words, 10 figures and up to 150 references.

Short communications - will be accepted for the early communication of important and original advances. Such accounts may be of a preliminary nature but should always be complete and should not exceed the equivalent of 3000 words, including figures and tables.

Submission checklist
You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

Ensure that the following items are present:

One author has been designated as the corresponding author with contact details:
• E-mail address
• Full postal address

All necessary files have been uploaded:
Manuscript:
• Include keywords
• All figures (include relevant captions)
• All tables (including titles, description, footnotes)
• Ensure all figure and table citations in the text match the files provided
• Indicate clearly if color should be used for any figures in print

Graphical Abstracts / Highlights files (where applicable)

Supplemental files (where applicable)

Further considerations
• Manuscript has been 'spell checked' and 'grammar checked'
• All references mentioned in the Reference List are cited in the text, and vice versa
• Permission has been obtained for use of copyrighted material from other sources (including the Internet)
• A competing interests statement is provided, even if the authors have no competing interests to declare
• Journal policies detailed in this guide have been reviewed
• Referee suggestions and contact details provided, based on journal requirements

For further information, visit our Support Center.

BEFORE YOU BEGIN
Ethics in publishing
Please see our information on Ethics in publishing.

Declaration of competing interest
All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. Authors should complete the declaration of competing interest statement using this template and upload to the submission system at the Attach/Upload Files step. Note: Please do not convert the .docx template to another file type. Author signatures are not required. If there are no interests to declare, please choose the first option in the template. More information.

Submission declaration and verification
Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify originality, your article may be checked by the originality detection service Crossref Similarity Check.

Use of inclusive language
Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns ("clinicians, patients/clients") as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

Changes to authorship
Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed. Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

Copyright
Upon acceptance of an article, authors will be asked to complete a 'License Agreement' (see more information on this). Permitted third party reuse of open access articles is determined by the author's choice of user license.

Author rights
As an author you (or your employer or institution) have certain rights to reuse your work. More information.

Elsevier supports responsible sharing
Find out how you can share your research published in Elsevier journals.
Role of the funding source
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement then this should be stated.

Open access
Please visit our Open Access page for more information.

Elsevier Researcher Academy
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

Language (usage and editing services)
Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the English Language Editing service available from Elsevier's Author Services.

Submission
Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

Referees
Please submit the names and institutional e-mail addresses of several potential referees. For more details, visit our Support site. Note that the editor retains the sole right to decide whether or not the suggested reviewers are used.

Suggested reviewers must be supplied with complete contact details and e-mail addresses. Reviewers should be knowledgeable of the research area and must not have a conflict of interest. Do not list collaborators, colleagues, researchers at your institution, former advisors or advisees.

Additional information
Authors are required to submit a cover letter with each new submission to the journal. This cover letter should acknowledge that the author has consulted the Guide for Authors in preparing his or her submitted manuscript. The author must also confirm that he or she has prepared the manuscript in compliance with the Ethics in Publishing Policy as described in the Guide for Authors.

In preparing the cover letter, the author must also address the following points:

Author indication if manuscript is a re-submission Suggested reviewers with complete contact details and e-mail addresses. Do not list collaborators, colleagues, researchers at your institution, former advisors or advisees. Keywords are provided References are in correct format PDF of manuscript is in correct order upon submission Manuscript length is in compliance with the Guide for Authors

PREPARATION

Peer review
This journal operates a single anonymized review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal's usual procedures, with peer review handled independently of the relevant editor and their research groups. More information on types of peer review.
**Language**
All papers submitted to the journal should be written in good English. Authors for whom English is not their native language are encouraged to have their paper checked before submission for grammar and clarity. English language and copyediting services can be provided by: International Science Editing and Asia Science Editing. Please note Elsevier neither endorses nor takes responsibility for any products, goods or services offered by outside vendors through our services or in any advertising. For more information about language editing services please visit our Support Center.

**Use of word processing software**
It is important that the file be saved in the native format of the word processor used. The text should be in single-column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. In particular, do not use the word processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc. When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). Note that source files of figures, tables and text graphics will be required whether or not you embed your figures in the text. See also the section on Electronic artwork.
To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

**Article structure**

**Subdivision - numbered sections**
Divide your article into clearly defined and numbered sections. Subsections should be numbered 1.1 (then 1.1.1, 1.1.2, ...), 1.2, etc. (the abstract is not included in section numbering). Use this numbering also for internal cross-referencing: do not just refer to 'the text'. Any subsection may be given a brief heading. Each heading should appear on its own separate line.

**Introduction**
State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results.

**Material and methods**
Provide sufficient details to allow the work to be reproduced by an independent researcher. Methods that are already published should be summarized, and indicated by a reference. If quoting directly from a previously published method, use quotation marks and also cite the source. Any modifications to existing methods should also be described.

**Results**
Results should be clear and concise.

**Discussion**
This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.

**Conclusions**
The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.

**Appendices**
If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

**Essential title page information**
- **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
- **Author names and affiliations.** Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. You can add your name between parentheses in your own script behind the English transliteration. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-
case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.

- **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. This responsibility includes answering any future queries about Methodology and Materials. **Ensure that the e-mail address is given and that contact details are kept up to date by the corresponding author.**

- **Present/permanent address.** If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

**Highlights**

Highlights are mandatory for this journal as they help increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the examples here: example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

**Abstract**

A concise and factual abstract is required. (An approximate maximum of 250 words should be observed.) The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s). Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

**Graphical abstract**

A graphical abstract is mandatory for this journal. It should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership online. Authors must provide images that clearly represent the work described in the article. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: please provide an image with a minimum of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. You can view Example Graphical Abstracts on our information site.

Authors can make use of Elsevier's Illustration Services to ensure the best presentation of their images also in accordance with all technical requirements.

**Keywords**

Immediately after the abstract, provide a maximum of 6 keywords, using American spelling and avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

**Abbreviations**

Define abbreviations that are not standard in this field in a footnote to be placed on the first page of the article. Such abbreviations that are unavoidable in the abstract must be defined at their first mention there, as well as in the footnote. Ensure consistency of abbreviations throughout the article.

**Acknowledgements**

Collate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

**Formatting of funding sources**

List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].
It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, please include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Math formulae
Please submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., X/Y. In principle, variables are to be presented in italics. Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).

Footnotes
Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors can build footnotes into the text, and this feature may be used. Otherwise, please indicate the position of footnotes in the text and list the footnotes themselves separately at the end of the article. Do not include footnotes in the Reference list.

Artwork and figure for cover

Submission of figures for cover
Following the acceptance of your article, if you wish to have a figure or other illustration that is representative of your manuscript considered for possible inclusion on the journal cover, you must follow the instructions below no later than 10 days after the date of your acceptance letter:

Select your figure or artwork. You are encouraged to modify the figure with color or other enhancements. The figure must illustrate your work but does not need to be a figure exactly the same as it appears in the article. In general, submitted figures should be in full color, though exceptional black and white images will be considered. Graphs and charts will not generally be considered for the cover. Your chances of being selected will increase if the figure is enhanced to make it more attractive. Please also include with the figure some descriptive text of the illustration for the cover. This should include at a minimum the figure legend, article title, Editorial Manager manuscript number and article authors’ names. You must briefly (150 words or less) explain the contents of the figure in the e-mail, its relevance to your article and the reason why you have chosen it. Convert the artwork and accompanying explanation to PDF format. For regular manuscripts send the PDF to Editor Tejraj Aminabhavi at aminabhavit@gmail.com, use "CEJ cover" as the subject line. If the manuscript belongs to a special issue, please send the PDF to the corresponding Guest Editor.

Selection of submitted figures is solely at the Editors' discretion. If your figure is selected, you will be contacted and advised if further information is needed. If your figure is selected for the cover, your article may be held slightly for publication for inclusion in the relevant issue. You will not receive correspondence if your figure is not selected.

Electronic artwork

General points
• Make sure you use uniform lettering and sizing of your original artwork.
• Embed the used fonts if the application provides that option.
• Aim to use the following fonts in your illustrations: Arial, Courier, Times New Roman, Symbol, or use fonts that look similar.
• Number the illustrations according to their sequence in the text.
• Use a logical naming convention for your artwork files.
• Provide captions to illustrations separately.
• Size the illustrations close to the desired dimensions of the published version.
• Submit each illustration as a separate file.
• Ensure that color images are accessible to all, including those with impaired color vision.

A detailed guide on electronic artwork is available.

You are urged to visit this site; some excerpts from the detailed information are given here.
Formats
If your electronic artwork is created in a Microsoft Office application (Word, PowerPoint, Excel) then please supply 'as is' in the native document format.
Regardless of the application used other than Microsoft Office, when your electronic artwork is finalized, please 'Save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):
EPS (or PDF): Vector drawings, embed all used fonts.
TIFF (or JPEG): Color or grayscale photographs (halftones), keep to a minimum of 300 dpi.
TIFF (or JPEG): Bitmapped (pure black & white pixels) line drawings, keep to a minimum of 1000 dpi.
TIFF (or JPEG): Combinations bitmapped line/half-tone (color or grayscale), keep to a minimum of 500 dpi.
Please do not:
• Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); these typically have a low number of pixels and limited set of colors;
• Supply files that are too low in resolution;
• Submit graphics that are disproportionately large for the content.

Color illustrations
If, together with your accepted article, you submit usable colour figures then Elsevier will ensure, at no additional charge, that these figures will appear in colour on the web (e.g., ScienceDirect and other sites) regardless of whether or not these illustrations are reproduced in colour in the printed version. Colour Illustrations can be printed in colour when they are judged by the Editor to be essential to the presentation. The publisher and the author will each bear part of the extra costs involved.
For colour reproduction in print, you will receive information regarding the costs from Elsevier after receipt of your accepted article. For further information on the preparation of electronic artwork, please see https://www.elsevier.com/artworkinstructions.

Please note: Because of technical complications which can arise by converting colour figures to 'grey scale' (for the printed version should you not opt for colour in print) please submit in addition usable black and white prints corresponding to all the colour illustrations.

Illustration services
Elsevier's Author Services offers Illustration Services to authors preparing to submit a manuscript but concerned about the quality of the images accompanying their article. Elsevier's expert illustrators can produce scientific, technical and medical-style images, as well as a full range of charts, tables and graphs. Image 'polishing' is also available, where our illustrators take your image(s) and improve them to a professional standard. Please visit the website to find out more.

Figure captions
Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

Tables
Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

References
Citation in text
Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.
Web references
As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

Data references
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

References in a special issue
Please ensure that the words 'this issue' are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

Reference management software
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal’s style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.

Users of Mendeley Desktop can easily install the reference style for this journal by clicking the following link:
http://open.mendeley.com/use-citation-style/chemical-engineering-journal
When preparing your manuscript, you will then be able to select this style using the Mendeley plug-ins for Microsoft Word or LibreOffice.

Reference style

Text: Indicate references by number(s) in square brackets in line with the text. The actual authors can be referred to, but the reference number(s) must always be given.
Example: '..... as demonstrated [3,6]. Barnaby and Jones [8] obtained a different result ....'

List: Number the references (numbers in square brackets) in the list in the order in which they appear in the text.
Examples:
Reference to a journal publication:
Reference to a journal publication with an article number:
Reference to a book:
Reference to a chapter in an edited book:
Reference to a website:
Reference to a dataset:
Reference to software:

Journal abbreviations source
Journal names should be abbreviated according to the List of Title Word Abbreviations.

Video
Elsevier accepts video material and animation sequences to support and enhance your scientific research. Authors who have video or animation files that they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table by referring to the video or animation content and noting in the body text where it should be placed. All submitted files should be properly labeled so that they directly relate to the video file's content. In order to ensure that your video or animation material is directly usable, please provide the file in one of our recommended file formats with a preferred maximum size of 150 MB per file, 1 GB in total. Video and animation files supplied will be published online in the electronic version of your article in Elsevier Web products, including ScienceDirect. Please supply 'stills' with your files: you can choose any frame from the video or animation or make a separate image. These will be used instead of standard icons and will personalize the link to your video data. For more detailed instructions please visit our video instruction pages. Note: since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and the print version for the portions of the article that refer to this content.

Data visualization
Include interactive data visualizations in your publication and let your readers interact and engage more closely with your research. Follow the instructions here to find out about available data visualization options and how to include them with your article.

Supplementary material
Supplementary material such as applications, images and sound clips, can be published with your article to enhance it. Submitted supplementary items are published exactly as they are received (Excel or PowerPoint files will appear as such online). Please submit your material together with the article and supply a concise, descriptive caption for each supplementary file. If you wish to make changes to supplementary material during any stage of the process, please make sure to provide an updated file. Do not annotate any corrections on a previous version. Please switch off the 'Track Changes' option in Microsoft Office files as these will appear in the published version.

Research data
This journal encourages and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings. To facilitate reproducibility and data reuse, this journal also encourages you to share your software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. If you are sharing data in one of these ways, you are encouraged to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

Data linking
If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.

For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.
In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

Mendeley Data
This journal supports Mendeley Data, enabling you to deposit any research data (including raw and processed data, video, code, software, algorithms, protocols, and methods) associated with your manuscript in a free-to-use, open access repository. During the submission process, after uploading your manuscript, you will have the opportunity to upload your relevant datasets directly to Mendeley Data. The datasets will be listed and directly accessible to readers next to your published article online.

For more information, visit the Mendeley Data for journals page.

Data in Brief
You have the option of converting any or all parts of your supplementary or additional raw data into a data article published in Data in Brief. A data article is a new kind of article that ensures that your data are actively reviewed, curated, formatted, indexed, given a DOI and made publicly available to all upon publication (watch this video describing the benefits of publishing your data in Data in Brief). You are encouraged to submit your data article for Data in Brief as an additional item directly alongside the revised version of your manuscript. If your research article is accepted, your data article will automatically be transferred over to Data in Brief where it will be editorially reviewed, published open access and linked to your research article on ScienceDirect. Please note an open access fee is payable for publication in Data in Brief. Full details can be found on the Data in Brief website. Please use this template to write your Data in Brief data article.

MethodsX
You have the option of converting relevant protocols and methods into one or multiple MethodsX articles, a new kind of article that describes the details of customized research methods. Many researchers spend a significant amount of time on developing methods to fit their specific needs or setting, but often without getting credit for this part of their work. MethodsX, an open access journal, now publishes this information in order to make it searchable, peer reviewed, citable and reproducible. Authors are encouraged to submit their MethodsX article as an additional item directly alongside the revised version of their manuscript. If your research article is accepted, your methods article will automatically be transferred over to MethodsX where it will be editorially reviewed. Please note an open access fee is payable for publication in MethodsX. Full details can be found on the MethodsX website. Please use this template to write your MethodsX article.

Data statement
To foster transparency, we encourage you to state the availability of your data in your submission. This may be a requirement of your funding body or institution. If your data is unavailable to access or unsuitable to post, you will have the opportunity to indicate why during the submission process, for example by stating that the research data is confidential. The statement will appear with your published article on ScienceDirect. For more information, visit the Data Statement page.

AFTER ACCEPTANCE

Online proof correction
To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Corresponding authors will receive an e-mail with a link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors. If preferred, you can still choose to annotate and upload your edits on the PDF version. All instructions for proofing will be given in the e-mail we send to authors, including alternative methods to the online version and PDF.

We will do everything possible to get your article published quickly and accurately. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. It is important to ensure that all corrections are sent back to us in one communication. Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.
**Offprints**

The corresponding author will, at no cost, receive a customized [Share Link](https://www.elsevier.com) providing 50 days free access to the final published version of the article on [ScienceDirect](https://www.sciencedirect.com). The Share Link can be used for sharing the article via any communication channel, including email and social media. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Both corresponding and co-authors may order offprints at any time via Elsevier's [Author Services](https://www.elsevier.com). Corresponding authors who have published their article gold open access do not receive a Share Link as their final published version of the article is available open access on ScienceDirect and can be shared through the article DOI link.

**AUTHOR INQUIRIES**

Visit the [Elsevier Support Center](https://www.elsevier.com) to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch.

You can also [check the status of your submitted article](https://www.sciencedirect.com) or find out [when your accepted article will be published](https://www.elsevier.com).
