DESCRIPTION

Announcement: From January 2021 Complementary Therapies in Medicine will become an open access journal. Authors who publish in Complementary Therapies in Medicine will be able to make their work immediately, permanently, and freely accessible.

Complementary Therapies in Medicine continues with the same aims and scope, editorial team, submission system and rigorous peer review.

Complementary Therapies in Medicine authors will pay an article publishing charge (APC), have a choice of license options, and retain copyright to their published work. The APC will be requested after peer review and acceptance. The APC payment will be required for all accepted articles submitted after the 30th of September 2020. The APC for Complementary Therapies in Medicine will be USD 1800 (excluding taxes).

Please note: Authors who have submitted their paper on or before the 30th of September 2020, will have their accepted article published in Complementary Therapies in Medicine at no charge. Authors submitting their paper after this date will be requested to pay the APC. For more details visit our FAQs page.

Complementary Therapies in Medicine is an international, peer-reviewed journal that has considerable appeal to anyone who seeks objective and critical information on complementary therapies or who wishes to deepen their understanding of these approaches. It will be of particular interest to healthcare practitioners including family practitioners, complementary therapists, nurses, and physiotherapists; to academics including social scientists and CAM researchers; to healthcare managers; and to patients.

Complementary Therapies in Medicine aims to publish valid, relevant and rigorous research and serious discussion articles with the main purpose of improving healthcare. The journal believes that good healthcare needs to be based on clinical judgement and the available evidence on what is safe and effective, integrating conventional and complementary therapies as appropriate.

Complementary Therapies in Medicine focuses on prospectively registered human randomized controlled trials using CONSORT criteria and systematic reviews, registered in PROSPERO, that follow 2020 PRISMA guidelines. We do not consider study protocols, animal or in vitro research, network pharmacology, or case reports/series. We occasionally consider observational studies using STROBE
guidelines; and we consider pilot studies focusing on feasibility of recruitment/retention/blinding/fidelity to study protocols.

Each issue features original, high quality research on complementary medicine, as well as information and experiences on integrating complementary medicine into mainstream care.

EDITORIAL BOARD

Editor-in-Chief
Kathi Kemper, The Ohio State University College of Medicine, 43210, Columbus, Ohio, United States of America
Pediatrics, Integrative Medicine, Education, Burnout, Meditation, Mind-body skills

Statistical Advisor
David Sibbritt, University of Technology Sydney, Faculty of Health, Australian Research Centre in Complementary and Integrative Medicine (ARCCIM), Building 10, Level 7, Room 218, 235-253 Jones Street, Sydney, 235-253, Australia
Complementary and alternative medicine, public health, biostatistics, ,

International Advisory Board
D. Anheyer, University of Duisburg-Essen, Faculty of Medicine, Essen, Germany
Integrative Medicine, Statistics, Meta-Analysis, Health Psychology

J. Barnes, The University of Auckland School of Pharmacy, Auckland, New Zealand
Herbal medicines, Pharmacovigilance, Pharmacy practice

T.P. Bell, Jackson State University, Jackson, Mississippi, United States of America
Irritable bowel syndrome, Ulcerative colitis, Constipation, Chinese Medicine, Clinical trial

Z. X Bian, Hong Kong Baptist University School of Chinese Medicine, Kowloon Tsai, Hong Kong
Irritable bowel syndrome, Ulcerative colitis, Constipation, Chinese Medicine, Clinical trial, ,

R. Bradley, National University of Natural Medicine, Portland, Oregon, United States of America
Diabetes, Cardiovascular disease, Natural Products, Mind-Body interventions, Nutritional interventions and epidemiology, ,

N. Bragazzi, York University, Department of Mathematics and Statistics, Toronto, Canada
Epidemiology, Biostatistics

A. Broom, University of New South Wales, Sydney, New South Wales, Australia
V. Bulgin, ADRIATIC DENT Dental Clinic, Rovinj, Croatia
Regenerative Medicine

A. Büssing, Witten/Herdecke University, Witten, Germany
Resources to cope with chronic illness, Spirituality, Quality of life, Non-pharmacological interventions, Health psychology, Questionnaire development, Chinese medicine, Cellular immunology

R.Q. Chen, The University of Hong Kong School of Chinese Medicine, Pokfulam, Hong Kong

K. Cheng, The Chinese University of Hong Kong Institute of Chinese Medicine, Hong Kong, Hong Kong

S. Cochrane, Western Sydney University, Penrith, New South Wales, Australia

M. C. Costa, Lusophone University of Humanities and Technologies School of Health Sciences and Technologies, Lisboa, Portugal
Medicinal Plants, Structure-activity relationships (SAR), Organic Chemistry, Analytical Chemistry, Risk Assessment and Risk Management, Food Supplements, Phytotherapy

M. Demarzo, Federal University of Sao Paulo, Department of Preventive Medicine, SÃO PAULO, Brazil
Health Promotion, Primary Care, Mindfulness

J. Dusek, Allina Health, Minneapolis, Minnesota, United States of America

Y. Fei, Beijing University of Chinese Medicine, Beijing, China
Clinical research, Systematic reviews, Guidelines and Qualitative research
Salutogenesis &, Health Promotion, Person Centered Healthcare, Traditional Medicine/CAM, Qualitative Research, Tibetan Buddhism, Spiritual Healing &, Meditation Research, Epistemology and Sociology of TM/CAM

M. Romoli, University of Florence, Firenze, Italy

A. Sahebkar, Mashhad University of Medical Sciences, Mashhad, Iran
Curcuminoids, Atherosclerosis, Dyslipidemia, Lipoprotein, Trehalose

R. Stange, Charite University Hospital Berlin, Berlin, Germany
Phytotherapy, nutrition and fasting, hyperthermia, natural medicine

K. Thomas, The University of Sheffield, Sheffield, United Kingdom

J. Wang
Scoliosis, Pain management, Hypertension, and Diabetes

J. Wardle, Southern Cross University National Center for Naturopathic Medicine, Lismore, Australia
Public Health

K. Watanabe, Yokohama University of Pharmacy, Yokohama, Japan
Kampo Medicine, Traditional Medicine, Herbal Medicine, Cancer, Immunology

U. Wolf, University of Bern, Bern, Switzerland

H. Yamashita, Morinomiya University of Medical Sciences, Osaka, Japan
Acupuncture, Clinical research methodology, Safety

J. Yuan, Tzu Chi International College of Traditional Chinese Medicine, Vancouver, British Columbia, Canada
Acupuncture, TCM herbs, Physiotherapy

G.Q. Zheng, The Second Affiliated Hospital and Yuying Children's Hospital of Wenzhou Medical University, Wenzhou, China
Evidence-based medicine of neurological diseases, Clinical trial for neurological diseases, Pharmacological evaluation on neurological diseases, Integrative medicine for neurological diseases
GUIDE FOR AUTHORS

The journal is a peer reviewed, Gold Open Access journal. Your Paper Your Way

We now differentiate between the requirements for new and revised submissions. You may choose to submit your manuscript as a single Word or PDF file to be used in the refereeing process. Only when your paper is at the revision stage, will you be requested to put your paper in to a 'correct format' for acceptance and provide the items required for the publication of your article. To find out more, please visit the Preparation section below.

Types of article we welcome

In the interests of simplicity and standardisation, Complementary Therapies in Medicine follows the International Committee on Medical Journal Editors' Uniform Instructions in most respects, and potential authors are strongly urged to consult these at http://www.icmje.org/index.html and to follow the Requirements for Submission of Manuscripts (summary of technical requirements) in detail. CTIM focuses on human clinical trials (following CONSORT guidelines), systematic reviews and meta-analyses (following PRISMA guidelines), and well-written, innovative. The checklists for each reporting guideline can be found on the EQUATOR website.

The only exceptions for this journal are:

1. Transfer of copyright is not required until final submission and the requisite forms will be supplied to the corresponding author by Elsevier.

2. Keywords are not printed in the journal.

3. Headings should be appropriate to the nature of the paper. In general, those for experimental papers should follow the usual conventions. Other papers can be subdivided as the author desires; the use of headings enhances readability. Normally, only two categories of heading should be used. Do not use 'he', 'his', etc. where the sex of the person being discussed is unknown: say 'the patient', etc. Avoid inelegant alternatives such as 'he/she'. Patients should not be automatically designated as 'she', and doctors as 'he'.

English language help service

Upon request, Elsevier will direct authors to an agent who can check and improve the English of their paper (before submission). Please visit our Support Center for further information.

Submissions

Authors are requested to submit their original manuscript and figures online via https://www.editorialmanager.com/ctim/default.aspx. This is the Elsevier web-based submission and review system. You will find full instructions located on this site - a Guide for Authors and a Guide for Online Submission. Please follow these guidelines to prepare and upload your article. Once the uploading is done, our system automatically generates an electronic pdf proof, which is then used for reviewing. All correspondence, including notification of the Editor's decision and requests for revisions, will be managed via this system. Author's suggested reviewers: With their submitted manuscript, authors must provide the name, email address and country of at least four reviewers for the consideration of the Editors in the Comments field during the online submission.

Authorship: All authors should have made substantial contributions to all of the following: (1) the conception and design of the study, or acquisition of data, or analysis and interpretation of data, (2) drafting the article or revising it critically for important intellectual content, (3) final approval of the version to be submitted.

Acknowledgements: All contributors who do not meet the criteria for authorship as defined above should be listed in an acknowledgements section. Examples of those who might be acknowledged include a person who provided purely technical help, writing assistance, or a department chair who provided only general support. Authors should disclose whether they had any writing assistance and identify the entity that paid for this assistance.
Role of the funding source:

All sources of funding must be declared as an acknowledgement at the end of the text. Authors should declare the role of study sponsors, if any, in the study design, in the collection, analysis and interpretation of data; in the writing of the manuscript; and in the decision to submit the manuscript for publication. If the study sponsors had no such involvement, the authors should so state.

References should include journal titles as the recognised abbreviation (available at http://www.nlm.nih.gov/), and should omit month and issue number.

Randomised controlled trials: All randomised controlled trials submitted for publication in Complementary Therapies in Medicine should include a completed Consolidated Standards of Reporting Trials (CONSORT) flow chart. Please refer to the CONSORT statement website at http://www.consort-statement.org for more information. Complementary Therapies in Medicine has adopted the proposal from the International Committee of Medical Journal Editors (ICMJE) which require, as a condition of consideration for publication of clinical trials, registration in a public trials registry. Trials must register at or before the onset of patient enrolment. The clinical trial registration number should be included at the end of the abstract of the article. For this purpose, a clinical trial is defined as any research project that prospectively assigns human subjects to intervention or comparison groups to study the cause-and-effect relationship between a medical intervention and a health outcome. Studies designed for other purposes, such as to study pharmacokinetics or major toxicity (e.g. phase I trials) would be exempt. Further information can be found at http://www.icmje.org.

Ethics: Work on human beings that is submitted to Complementary Therapies in Medicine should comply with the principles laid down in the Declaration of Helsinki; Recommendations guiding physicians in biomedical research involving human subjects. Adopted by the 18th World Medical Assembly, Helsinki, Finland, June 1964, amended by the 29th World Medical Assembly, Tokyo, Japan, October 1975, the 35th World Medical Assembly, Venice, Italy, October 1983, and the 41st World Medical Assembly, Hong Kong, September 1989. The manuscript should contain a statement that the work has been approved by the appropriate ethical committees related to the institution(s) in which it was performed and that subjects gave informed consent to the work. Studies involving experiments with animals must state that their care was in accordance with institutional guidelines. Studies on patients or volunteers require ethics committee approval and informed consent which should be documented in your paper. Patients have a right to privacy. Therefore identifying information, including patients, images, names, initials, or hospital numbers, should not be included in videos, recordings, written descriptions, photographs, and pedigrees unless the information is essential for scientific purposes and you have obtained written informed consent for publication in print and electronic form from the patient (or parent, guardian or next of kin where applicable). If such consent is made subject to any conditions, Elsevier must be made aware of all such conditions. Written consents must be provided to Elsevier on request. Even where consent has been given, identifying details should be omitted if they are not essential. If identifying characteristics are altered to protect anonymity, such as in genetic pedigrees, authors should provide assurance that alterations do not distort scientific meaning and editors should so note. If such consent has not been obtained, personal details of patients included in any part of the paper and in any supplementary materials (including all illustrations and videos) must be removed before submission.

Laboratory experiments: The Editor and Editorial Committee of the Journal believe that the use of animals in research into CAM is rarely justified. We encourage authors to use alternative methods of answering research questions wherever possible. Where no alternative genuinely exists, and where the potential clinical benefit justifies the use of animals, Complementary Therapies in Medicine expects authors to state clearly that they have met external standards such as those described in the UK Home Office site (http://www.homeoffice.gov.uk) involving designated establishments, ethical committee approval, and a licensing procedure both for the project and for the responsible individual. Where these standards have not been met, it is unlikely that the Editor will accept the paper for publication. Peer Review Reports of original research will be sent for review by two referees, one of whom is usually
external to the editorial team. Authors may be asked to make certain revisions before the paper is sent for review. The Editors’ decision is final and once given, correspondence about the decision will not usually be entered.

**Short reports (500-1000 words):** These are appropriate for preliminary reports of work or where the study provided limited amounts of data. These reports should be presented in the same format as full papers, i.e with Abstract, Introduction, Methods, Results and a short Discussion or Conclusion. A maximum of two tables may be included. For further details, please follow instructions as for Full Papers. Further details are given here regarding format and technical requirements but authors are reminded that a complete outline of how to submit a manuscript is provided at [http://www.icmje.org/index.html](http://www.icmje.org/index.html) bar the exceptions listed above. Please ensure that all sections of your article are in a single file in the order requested below and with references in the correct style. Figure legends, running heads and tables should be placed at the end of the file. If possible, figures should be supplied electronically in separate files with the name of the package used and as original artwork.

**Proprietary Names:** Proprietary names of drugs, instruments, etc. should be indicated by the use of initial capitals. The name and location of the manufacturer should also be given within parentheses. In some cases, authors may be asked to make certain revisions before the paper is sent for review. A paper is accepted for publication on the understanding that it has not been submitted simultaneously to another journal in the English language. Rejected papers will not be returned to authors except on request. Typescripts that contain the results of human and/or animal studies will only be accepted for publication if it is made clear that a high standard of ethics was applied in carrying out the investigations. In the case of invasive studies in humans, typescripts should include a statement that the research protocol was approved by a local ethical committee. The Editors reserve the right to make editorial and literary corrections. Any opinions expressed or policies advocated do not necessarily reflect the opinions or policies of the Editors. The publishers reserve the right to publish accepted papers in whichever issue they decide.

**General Information** Papers should be submitted in journal style, in accordance with the International Committee of Medical Journal Editors’ Uniform requirements for manuscripts submitted to biomedical journals (BMJ 1991; 302: 338-341). Failure to do so may lead to significant delays in publication or to rejection of your paper. Spelling should be British. A word count should be included on the front sheet of the manuscript.

**Title** The title page should give the following information: (1) Title of the article. (2) Initials and name of each author, with highest academic degree(s). (3) Name and address of the department or institution to which the work should be attributed. (4) Name, address, telephone and fax numbers of the author responsible for correspondence and to whom requests for offprints should be sent. (5) Sources of support in the form of grants.

**Abstracts** The abstract should consist of 250 words summarizing the contents of the article. Structured abstracts are required for reports of original research. The following headings should be used: objectives; design; setting; interventions (if appropriate); main outcome measures; results; conclusions.

**Length**

**Full Papers:** Please add a wordcount of your paper on the title page of the typescript. The recommended wordcount is 3000-3500 words. Papers with a word count of more than 4000 words will be only be considered for publication in exceptional cases. A limit of 3500 words would be considered for reviews provided the author can justify the extra value brought to the reader. The word limit for Short Communications is 1500 words. In some cases, the editor may consider the publication of large tables, appendices, etc, as supplementary data (see guidelines below for supplementary data) in the online version of the journal. Papers should be set out as follows, with each section beginning on a separate sheet: title page, summary, text, acknowledgements, references, tables, captions to illustrations.

**Reference Format**
The accuracy of references is the responsibility of the author. References should be entered consecutively by Arabic numerals in parentheses or superscript numerals in the text. The references should be listed in numerical order on a separate sheet in double or triple spacing. References to journals should include the author's name and initials (list all authors where there are six or fewer; where there are seven or more, list three and add 'et al'), full title of paper, journal title, year of publication, volume number, page range of paper in full.

For example:
1. Fell M, Connolly S, Herns M et al. Mood and psychiatric disturbance in HIV and AIDS: changes over time. British Journal of Psychiatry 1993; 162: 6604-6610. References to books should be set out as follows:

**Figures**

**Line illustrations:**

All line illustrations should present a crisp black image on an even white background. The dimensions should be 127 x 173 mm (5 x 7") or no larger than 203 x 254 mm (8 x 10").

**Photographic illustrations and radiographs:**

These should be submitted by post as clear, lightly contrasted black-and-white prints (unmounted), sizes as given above. Figures with labelling included should be submitted appropriately lettered in capitals. The size of the lettering should be appropriate to that of the illustration, taking into account the necessary size reduction. Please inform the Administrative Editor that you are sending figures by separate cover when you e-mail your manuscript. All illustrations should be clearly marked with the figure number and author's name (by means of a label pasted on the back or in soft crayon), and the top should be indicated by an arrow. Never use ink of any kind. Do not use paper clips, as these can scratch or mark illustrations. Illustrations in colour cannot be accepted unless the cost of origination and printing is paid by the author. Captions should be typed in double spacing on separate sheets from the main typescript. The publishers cannot improve upon the quality of submitted artwork. Poor-quality originals will appear in print as inferior quality. Please ensure that artwork is clear and professional.

**Tables**

These should be double spaced on separate sheets and contain only horizontal rules. Do not submit tables as figures. A short descriptive title should appear above each table and any footnotes, suitably identified, below. Care must be taken to ensure that all units are included. Ensure that each table is cited in the text.

**Units and Abbreviations**

Avoid abbreviations in the title and abstract. All unusual abbreviations should be fully explained at their first occurrence in the text. All measurements should be expressed in SI units. For more detailed recommendations, authors may consult the Royal Society of Medicine publication entitled Units, Symbols and Abbreviations: A Guide for Biological and Medical Editors and Authors.

**Preparation of supplementary data**

Elsevier now accepts electronic supplementary material (e-components) to support and enhance your scientific research. Supplementary files offer the Author additional possibilities to publish supporting applications, movies, animation sequences, high-resolution images, background datasets, sound clips and more. Supplementary files supplied will be published online alongside the electronic version of your article in Elsevier Web products, including ScienceDirect: [https://www.sciencedirect.com](https://www.sciencedirect.com). In order to ensure that your submitted material is directly usable, please ensure that data is provided in one of our recommended file formats. Authors should submit the material in electronic format together with the article and supply a concise and descriptive caption for each file. For more detailed instructions please visit our artwork instruction pages at [https://www.elsevier.com/artworkinstructions](https://www.elsevier.com/artworkinstructions).
Submission checklist

You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

Ensure that the following items are present:

One author has been designated as the corresponding author with contact details:
• E-mail address
• Full postal address

All necessary files have been uploaded:
Manuscript:
• Include keywords
• All figures (include relevant captions)
• All tables (including titles, description, footnotes)
• Ensure all figure and table citations in the text match the files provided
• Indicate clearly if color should be used for any figures in print
Graphical Abstracts / Highlights files (where applicable)
Supplemental files (where applicable)

Further considerations
• Manuscript has been 'spell checked' and 'grammar checked'
• All references mentioned in the Reference List are cited in the text, and vice versa
• Permission has been obtained for use of copyrighted material from other sources (including the Internet)
• A competing interests statement is provided, even if the authors have no competing interests to declare
• Journal policies detailed in this guide have been reviewed
• Referee suggestions and contact details provided, based on journal requirements

For further information, visit our Support Center.

ConPhyMP statement
For studies (including systematic reviews and meta-analyses as well as RCTs and cohort trials) of herbal products, please use the checklist from the ConPhyMP Advisory Group: https://www.frontiersin.org/articles/10.3389/fphar.2022.953205/full to fully characterize the product used and/or to report on whether the original articles cited in a systematic review conducted and reported such analyses.

Declaration of interest
All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential competing interests include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. Authors must disclose any interests in two places: 1. A summary declaration of interest statement in the title page file (if double anonymized) or the manuscript file (if single anonymized). If there are no interests to declare then please state this: 'Disclosures of interest: none'. 2. Detailed disclosures as part of a separate Declaration of Interest form, which forms part of the journal's official records. It is important for potential interests to be declared in both places and that the information matches. More information.

Declaration of generative AI in scientific writing
The below guidance only refers to the writing process, and not to the use of AI tools to analyse and draw insights from data as part of the research process.

Where authors use generative artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should only use these technologies to improve readability and language. Applying the technology should be done with human oversight and control, and authors should carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or biased. AI and AI-assisted technologies should not be listed as an author or co-author, or be cited as an author. Authorship implies responsibilities and tasks that can only be attributed to and performed by humans, as outlined in Elsevier’s AI policy for authors.
Authors should disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

**Disclosure instructions**
Authors must disclose the use of generative AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in the core manuscript file, before the References list. The statement should be placed in a new section entitled 'Declaration of Generative AI and AI-assisted technologies in the writing process'.

Statement: *During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.*

This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, there is no need to add a statement.

**Submission declaration**
Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder.

**Preprints**
Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see 'Multiple, redundant or concurrent publication' for more information).

**Preprint posting on SSRN**
In support of Open Science, this journal offers its authors a free preprint posting service. Preprints provide early registration and dissemination of your research, which facilitates early citations and collaboration.

During submission to Editorial Manager, you can choose to release your manuscript publicly as a preprint on the preprint server SSRN once it enters peer-review with the journal. Your choice will have no effect on the editorial process or outcome with the journal. Please note that the corresponding author is expected to seek approval from all co-authors before agreeing to release the manuscript publicly on SSRN.

You will be notified via email when your preprint is posted online and a Digital Object Identifier (DOI) is assigned. Your preprint will remain globally available free to read whether the journal accepts or rejects your manuscript.

For more information about posting to SSRN, please consult the SSRN Terms of Use and FAQs.

**Use of inclusive language**
Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns ("clinicians, patients/clients") as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. When coding terminology is used, we recommend to avoid offensive or exclusionary terms such as "master", "slave", "blacklist" and "whitelist". We
suggest using alternatives that are more appropriate and (self-) explanatory such as "primary", "secondary", "blocklist" and "allowlist". These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

**Reporting sex- and gender-based analyses**

**Reporting guidance**

For research involving or pertaining to humans, animals or eukaryotic cells, investigators should integrate sex and gender-based analyses (SGBA) into their research design according to funder/sponsor requirements and best practices within a field. Authors should address the sex and/or gender dimensions of their research in their article. In cases where they cannot, they should discuss this as a limitation to their research's generalizability. Importantly, authors should explicitly state what definitions of sex and/or gender they are applying to enhance the precision, rigor and reproducibility of their research and to avoid ambiguity or conflation of terms and the constructs to which they refer (see Definitions section below). Authors can refer to the **Sex and Gender Equity in Research (SAGER) guidelines** and the **SAGER guidelines checklist**. These offer systematic approaches to the use and editorial review of sex and gender information in study design, data analysis, outcome reporting and research interpretation - however, please note there is no single, universally agreed-upon set of guidelines for defining sex and gender.

**Definitions**

Sex generally refers to a set of biological attributes that are associated with physical and physiological features (e.g., chromosomal genotype, hormonal levels, internal and external anatomy). A binary sex categorization (male/female) is usually designated at birth ("sex assigned at birth"), most often based solely on the visible external anatomy of a newborn. Gender generally refers to socially constructed roles, behaviors, and identities of women, men and gender-diverse people that occur in a historical and cultural context and may vary across societies and over time. Gender influences how people view themselves and each other, how they behave and interact and how power is distributed in society. Sex and gender are often incorrectly portrayed as binary (female/male or woman/man) and unchanging whereas these constructs actually exist along a spectrum and include additional sex categorizations and gender identities such as people who are intersex/have differences of sex development (DSD) or identify as non-binary. Moreover, the terms "sex" and "gender" can be ambiguous—thus it is important for authors to define the manner in which they are used. In addition to this definition guidance and the SAGER guidelines, the resources on this page offer further insight around sex and gender in research studies.

**Author contributions**

For transparency, we require corresponding authors to provide co-author contributions to the manuscript using the relevant CRediT roles. The CRediT taxonomy includes 14 different roles describing each contributor’s specific contribution to the scholarly output. The roles are: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; and Writing - review & editing. Note that not all roles may apply to every manuscript, and authors may have contributed through multiple roles. More details and an example.

**Authorship**

All authors should have made substantial contributions to all of the following: (1) the conception and design of the study, or acquisition of data, or analysis and interpretation of data, (2) drafting the article or revising it critically for important intellectual content, (3) final approval of the version to be submitted.

**Article transfer service**

This journal uses the Elsevier Article Transfer Service to find the best home for your manuscript. This means that if an editor feels your manuscript is more suitable for an alternative journal, you might be asked to consider transferring the manuscript to such a journal. The recommendation might be provided by a Journal Editor, a dedicated Scientific Managing Editor, a tool assisted recommendation, or a combination. If you agree, your manuscript will be transferred, though you will have the opportunity to make changes to the manuscript before the submission is complete. Please note that your manuscript will be independently reviewed by the new journal. More information.
Copyright
Upon acceptance of an article, authors will be asked to complete an 'Exclusive License Agreement' (more information). Permitted third party reuse of gold open access articles is determined by the author's choice of user license.

Author rights
As an author you (or your employer or institution) have certain rights to reuse your work. More information.

Elsevier supports responsible sharing
Find out how you can share your research published in Elsevier journals.

Role of the funding source
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement, it is recommended to state this.

Open access
Please visit our Open Access page for more information.

Elsevier Researcher Academy
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

Language (usage and editing services)
Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the English Language Editing service available from Elsevier's Author Services.

Submission
Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

Queries
For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

NEW SUBMISSIONS
Submission to this journal proceeds totally online and you will be guided stepwise through the creation and uploading of your files. The system automatically converts your files to a single PDF file, which is used in the peer-review process.
As part of the Your Paper Your Way service, you may choose to submit your manuscript as a single file to be used in the refereeing process. This can be a PDF file or a Word document, in any format or layout that can be used by referees to evaluate your manuscript. It should contain high enough quality figures for refereeing. If you prefer to do so, you may still provide all or some of the source files at the initial submission. Please note that individual figure files larger than 10 MB must be uploaded separately.

References
There are no strict requirements on reference formatting at submission. References can be in any style or format as long as the style is consistent. Where applicable, author(s) name(s), journal title/book title, chapter title/article title, year of publication, volume number/book chapter and the article number or pagination must be present. Use of DOI is highly encouraged. The reference style used by the journal will be applied to the accepted article by Elsevier at the proof stage. Note that missing data will be highlighted at proof stage for the author to correct.
Formatting requirements
There are no strict formatting requirements but all manuscripts must contain the essential elements needed to convey your manuscript, for example Abstract, Keywords, Introduction, Materials and Methods, Results, Conclusions, Artwork and Tables with Captions.
If your article includes any Videos and/or other Supplementary material, this should be included in your initial submission for peer review purposes.
Divide the article into clearly defined sections.

Figures and tables embedded in text
Please ensure the figures and the tables included in the single file are placed next to the relevant text in the manuscript, rather than at the bottom or the top of the file. The corresponding caption should be placed directly below the figure or table.

Peer review
This journal operates a single anonymized review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal's usual procedures, with peer review handled independently of the relevant editor and their research groups. More information on types of peer review.

REVISED SUBMISSIONS
Use of word processing software
Regardless of the file format of the original submission, at revision you must provide us with an editable file of the entire article. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). See also the section on Electronic artwork.
To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

Article structure
Subdivision - numbered sections
Divide your article into clearly defined and numbered sections. Subsections should be numbered 1.1 (then 1.1.1, 1.1.2, ...), 1.2, etc. (the abstract is not included in section numbering). Use this numbering also for internal cross-referencing: do not just refer to 'the text'. Any subsection may be given a brief heading. Each heading should appear on its own separate line.

Introduction
State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results.

Material and methods
Provide sufficient details to allow the work to be reproduced by an independent researcher. Methods that are already published should be summarized, and indicated by a reference. If quoting directly from a previously published method, use quotation marks and also cite the source. Any modifications to existing methods should also be described.

Theory/calculation
A Theory section should extend, not repeat, the background to the article already dealt with in the Introduction and lay the foundation for further work. In contrast, a Calculation section represents a practical development from a theoretical basis.

Results
Results should be clear and concise.

Discussion
This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.
Conclusions
The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.

Appendices
If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

Essential title page information
- **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
- **Author names and affiliations.** Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. You can add your name between parentheses in your own script behind the English transliteration. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lowercase superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.
- **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. This responsibility includes answering any future queries about Methodology and Materials. **Ensure that the e-mail address is given and that contact details are kept up to date by the corresponding author.**
- **Present/permanent address.** If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

Highlights
Highlights are optional yet highly encouraged for this journal, as they increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

Abbreviations
Define abbreviations that are not standard in this field in a footnote to be placed on the first page of the article. Such abbreviations that are unavoidable in the abstract must be defined at their first mention there, as well as in the footnote. Ensure consistency of abbreviations throughout the article.

Units and Abbreviations
Avoid abbreviations in the title and abstract. All unusual abbreviations should be fully explained at their first occurrence in the text. All measurements should be expressed in SI units. For more detailed recommendations, authors may consult the Royal Society of Medicine publication entitled Units, Symbols and Abbreviations: A Guide for Biological and Medical Editors and Authors.

Formatting of funding sources
List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, it is recommended to include the following sentence:
This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Footnotes
Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors build footnotes into the text, and this feature may be used. Should this not be the case, indicate the position of footnotes in the text and present the footnotes themselves separately at the end of the article.

Artwork
Electronic artwork
General points
• Make sure you use uniform lettering and sizing of your original artwork.
• Preferred fonts: Arial (or Helvetica), Times New Roman (or Times), Symbol, Courier.
• Number the illustrations according to their sequence in the text.
• Use a logical naming convention for your artwork files.
• Indicate per figure if it is a single, 1.5 or 2-column fitting image.
• For Word submissions only, you may still provide figures and their captions, and tables within a single file at the revision stage.
• Please note that individual figure files larger than 10 MB must be provided in separate source files.

A detailed guide on electronic artwork is available.
You are urged to visit this site; some excerpts from the detailed information are given here.
Formats
Regardless of the application used, when your electronic artwork is finalized, please 'save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):
EPS (or PDF): Vector drawings. Embed the font or save the text as 'graphics'.
TIFF (or JPG): Color or grayscale photographs (halftones): always use a minimum of 300 dpi.
TIFF (or JPG): Bittedmapped line drawings: use a minimum of 1000 dpi.
TIFF (or JPG): Combinations bitmapped line/half-tone (color or grayscale): a minimum of 500 dpi is required.
Please do not:
• Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); the resolution is too low.
• Supply files that are too low in resolution.
• Submit graphics that are disproportionately large for the content.

Figure captions
Ensure that each illustration has a caption. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

Tables
Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

References
Data references
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.
Preprint references
Where a preprint has subsequently become available as a peer-reviewed publication, the formal publication should be used as the reference. If there are preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published, these may be referenced. Preprints should be clearly marked as such, for example by including the word preprint, or the name of the preprint server, as part of the reference. The preprint DOI should also be provided.
Reference management software
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal’s style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.

Reference formatting
There are no strict requirements on reference formatting at submission. References can be in any style or format as long as the style is consistent. Where applicable, author(s) name(s), journal title/book title, chapter title/article title, year of publication, volume number/book chapter and the article number or pagination must be present. Use of DOI is highly encouraged. The reference style used by the journal will be applied to the accepted article by Elsevier at the proof stage. Note that missing data will be highlighted at proof stage for the author to correct. If you do wish to format the references yourself they should be arranged according to the following examples:

The accuracy of references is the responsibility of the author. References should be entered consecutively by Arabic numerals in parentheses or superscript numerals in the text. The references should be listed in numerical order on a separate sheet in double or triple spacing. References to journals should include the author's name and initials (list all authors where there are six or fewer; where there are seven or more, list three and add 'et al'), full title of paper, journal title, year of publication, volume number, page range of paper in full.

For example:

References to books should be set out as follows:

Reference style
Text: Indicate references by (consecutive) superscript arabic numerals in the order in which they appear in the text. The numerals are to be used outside periods and commas, inside colons and semicolons. For further detail and examples you are referred to the AMA Manual of Style, A Guide for Authors and Editors, 11th Edition.

List: Number the references in the list in the order in which they appear in the text.

Examples:
Reference to a journal publication:

Reference to a journal publication with an article number:

Reference to a book:

Reference to a chapter in an edited book:

Reference to a website:

Reference to a dataset:

Reference to software:

Data visualization
Include interactive data visualizations in your publication and let your readers interact and engage more closely with your research. Follow the instructions here to find out about available data visualization options and how to include them with your article.

Research data
This journal encourages and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings, which may also include software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. If you are sharing data in one of these ways, you are encouraged to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

Data linking
If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.

For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.

In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

Research Elements
This journal enables you to publish research objects related to your original research – such as data, methods, protocols, software and hardware – as an additional paper in a Research Elements journal.

Research Elements is a suite of peer-reviewed, open access journals which make your research objects findable, accessible and reusable. Articles place research objects into context by providing detailed descriptions of objects and their application, and linking to the associated original research articles. Research Elements articles can be prepared by you, or by one of your collaborators.

During submission, you will be alerted to the opportunity to prepare and submit a manuscript to one of the Research Elements journals.

More information can be found on the Research Elements page.

Data statement
To foster transparency, we encourage you to state the availability of your data in your submission. This may be a requirement of your funding body or institution. If your data is unavailable to access or unsuitable to post, you will have the opportunity to indicate why during the submission process, for example by stating that the research data is confidential. The statement will appear with your published article on ScienceDirect. For more information, visit the Data Statement page.
Online proof correction
To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Corresponding authors will receive an e-mail with a link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors.
If preferred, you can still choose to annotate and upload your edits on the PDF version. All instructions for proofing will be given in the e-mail we send to authors, including alternative methods to the online version and PDF.
We will do everything possible to get your article published quickly and accurately. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. It is important to ensure that all corrections are sent back to us in one communication. Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

Offprints
The corresponding author will, at no cost, receive a customized Share Link providing 50 days free access to the final published version of the article on ScienceDirect. The Share Link can be used for sharing the article via any communication channel, including email and social media. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Corresponding authors who have published their article gold open access do not receive a Share Link as their final published version of the article is available open access on ScienceDirect and can be shared through the article DOI link.

AUTHOR INQUIRIES
Visit the Elsevier Support Center to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch. You can also check the status of your submitted article or find out when your accepted article will be published.
