EXCELLENCE PAVES THE WAY

With Current Opinion in Physiology

**Current Opinion in Physiology** publishes invited reviews that reflect and shape current opinion on physiology and its future directions. The journal provides specialists, researchers, lecturers, and students a unique platform to keep up to date with the expanding volume of information published in the field by providing the views of experts on current advances in the field of physiology in a concise and readable format, and evaluations of the most interesting papers, annotated by experts, from the great wealth of recent original publications.

Papers will reflect the wide range of multidisciplinary approaches that are used to investigate questions in this field, including integration of physiology at the systems, cellular and molecular levels.

Areas of interest include (but are not limited to):

- Cellular/Molecular;
- Cardiovascular;
- Respiratory;
- Gastro-Intestinal;
- Renal;
- Neurophysiology;
- Exercise physiology;
- Metabolism;
- Endocrine;
- Reproductive;
- Nutritional;
- Environmental;
- Comparative;
- Control systems (including neural);
- Development and Ageing;
- Psychophysics; and
- Pathophysiology.

**Current Opinion in Physiology** builds on Elsevier's reputation for excellence in scientific publishing and long-standing commitment to communicating reproducible biomedical research targeted at...
improving human health. It is a companion to the new Gold Open Access journal Current Research in Physiology and is part of the Current Opinion and Research (CO+RE) suite of journals. All CO+RE journals leverage the Current Opinion legacy—of editorial excellence, high-impact, and global reach—to ensure they are a widely read resource that is integral to scientists' workflow.

**Expertise** - Editors and Editorial Board bring depth and breadth of expertise and experience to the journal.

**Discoverability** - Articles get high visibility and maximum exposure on an industry-leading platform that reaches a vast global audience.

Review articles in Current Opinion in Physiology are by invitation only.

Please see our Guide for Authors for information on article submission. If you require any further information or help, please visit our Support Center.

**ABSTRACTING AND INDEXING**

Emerging Sources Citation Index (ESCI)

**EDITORIAL BOARD**

*Editors-in-Chief*

Alasdair Gibb, University College London, London, United Kingdom
Neurophysiology, Glutamate receptors and Synaptic transmission in the central nervous system (CNS)

Åsa Gustafsson, University of California at San Diego (UCSD), Skaggs School of Pharmacy and Pharmaceutical Sciences, La Jolla, California, United States of America
Cardiac physiology, Cardiac myocytes, Mitochondrial function, Autophagy

*Editorial Board*

Joerg T. Albert, University College London, London, United Kingdom
Sensory physiology, Mechanosensation, Hearing, circadian systems, Chronobiology, Sensory biophysics, Sensory homeostasis, Mechanosensory behaviour, Molecular neurobiology, Sensory ecology

Jonathan Ashmore, University College London, London, United Kingdom
Physiological biophysics, sensory physiology, cellular mechanisms of hearing, potassium homeostasis in the cochlea and deafness, signal transduction in cancer

David Attwell, University College London, London, United Kingdom
Cellular neuroscience, neuron-glial interactions and brain energy supply using patch-clamping, 2-photon imaging, immunolabelling and mathematical modelling techniques

Matthew Bailey, The University of Edinburgh, Edinburgh, United Kingdom
Kidney physiology, kidney injury and disease, hypertension, cardiovascular physiology, vascular dysfunction

Richard Baines, The University of Manchester, Manchester, United Kingdom
Drosophila, neural development, electrophysiology, epilepsy, magnetosensitivity, sodium channels

Catherina Becker, The University of Edinburgh, Edinburgh, United Kingdom
Cellular and molecular mechanisms of regeneration, motor neuron diseases, control and development of the spinal locomotor network

Thomas Becker, The University of Edinburgh, Edinburgh, United Kingdom
Neural development, neural regeneration

Paolo Bernardi, University of Padua, Padova, Italy
Mitochondria, permeability transition, calcium, cell death, cyclophilins

Donald Bers, University of California Davis, Davis, United States of America
Cardiac physiology, Cellular and molecular factors of cardiac muscle contraction, Intracellular calcium, Calcium transport, Calcium channels, Cardiac electrophysiology, Excitation-contraction coupling and CaMKII

Bryndis Birnir, Uppsala University Department of Medical Cell Biology, Uppsala, Sweden
Molecular physiology, GABA, CNS

Derek Bowie, McGill University Department of Pharmacology & Therapeutics, Montréal, Canada
Ion channels, ionotropic glutamate receptors, GABA-A receptors, AMPA receptors, Kainate receptors, synaptic transmission, plasticity mechanisms, cerebellum, retina, neurodevelopmental disorders, Fragile X syndrome, CNS disease, neuropharmacology, patch clamp electrophysiology, single channel analysis

Karen Elizabeth Chapman, The University of Edinburgh The Queen's Medical Research Institute, Edinburgh, United Kingdom

Actions of glucocorticoids

Sumantra Chattarji, National Centre for Biological Sciences, Bangalore, India

Neurophysiology, Learning and memory, Synaptic plasticity, Stress, Autism

Felipe Court, Mayor University, Santiago, Chile

Axons, Glia and NMJ

Samarjit Das, Johns Hopkins University School of Medicine, Baltimore, United States of America

Cellular physiology, Mitochondrial microRNA, RNA biology in cardiovascular and infectious diseases

Lea Delbridge, The University of Melbourne School of Biomedical Sciences, Melbourne, Australia

Cardiac physiology, Cardiac phenomics, Diabetic cardiomyopathy, Cardiac adiposity, Heart failure, Cardio-metabolic health, Sex differences cardiac pathophysiology, Cardiac mechano-transduction

Susan Deuchars, University of Leeds School of Biomedical Sciences, Leeds, United Kingdom

Spinal cord, neurogenesis, autonomic neuroscience, neuromodulation, electrophysiology, imaging, microeurography

Lucy Donaldson, University of Nottingham, Nottingham, United Kingdom

Neurophysiology, sensory physiology, neuronal signalling in chronic pain, arthritis, diabetes, chemotherapy-induced pain

Gerald W Dorn II, Washington University in St Louis School of Medicine, Saint Louis, United States of America

Cardiac physiology, cellular, molecular, and genetic studies of cardiac hypertrophy and heart failure

David Eisner, The University of Manchester, Manchester, United Kingdom

Cardiac calcium signalling

John Elrod, Temple University, Philadelphia, United States of America

Mitochondrial biology, Calcium signalling, Redox biology, Cell death signalling, Genetic mouse models, Fibrosis, Heart failure, Neurodegeneration, Cardioprotection

Peter Ferdinandy, Semmelweis University of Medicine, Budapest, Hungary

Cardiac biochemistry, ischemia/reperfusion, cardiac adaptation, hypercholesterolemia, isolated heart nitrate tolerance, cardiac sensory nerves, nitric oxide, free radicals, heat-shock proteins

Teresa Giraldez, University of La Laguna, La Laguna, Tenerife, Spain

Ion channels, neurological diseases associated to defects in ion channel function, cellular electrophysiology, imaging

Brian Glancy, National Institutes of Health, Bethesda, United States of America

Exercise physiology, Skeletal muscle, Mitochondrial function

Livia Hool, The University of Western Australia School of Human Sciences, Perth, Australia

cardiovascular, ion channels, cardiomyopathy, mitochondria

Susan E. Howlett, Dalhousie University Departments of Pharmacology and Medicine (Geriatric Medicine), Halifax, Canada

Cardiac physiology, Cardiovascular electrophysiology, Aging, Frailty, Sex differences, Sex steroid hormones, Heart diseases

Peter Jones, University of Otago, Dunedin, New Zealand

Ion channels, cardiac disease, arrhythmias, calcium signalling

Daniel Kelly, University of Pennsylvania Perelman School of Medicine, Philadelphia, United States of America

Cardiac physiology, Metabolism, Mitochondrial biogenesis and Remodelling

Stephan Kröger, Ludwig-Maximilians University Munich Institute for Physiology, Planegg, Germany

Synapse formation, Muscle spindle, Neuromuscular junction

W. Jonathan Lederer, University of Maryland School of Medicine, Baltimore, United States of America

Cardiac cellular physiology, calcium signalling, sodium calcium exchange mechanisms, excitation-contraction (EC) coupling, X-ROS signalling

Diane Lipscombe, Brown University, Providence, United States of America

Ion channels, RNA splicing, calcium signalling

Alicia Mattiazi, National University of La Plata, La Plata, Argentina

Calcium signalling, excitation-contraction coupling in isolated cardiac myocytes, calcium calmodulin dependent protein kinase (CaMKII)

James McCormick, Oregon Health & Science University, Portland, United States of America

Molecular physiology, Mechanisms of blood pressure regulation, Sodium and potassium homeostasis, Glucocorticoid receptors

Julie R. McMullen, Baker Heart and Diabetes Institute, Melbourne, Australia

Cardiac physiology, cardiac hypertrophy, adeno-associated virus (AAV) technology, exercise, heart failure, atrial fibrillation, microRNAs, IGF1-PI3K signaling
Kimberley M. Mellor, The University of Auckland Department of Physiology, Auckland, New Zealand
Cardiac, diabetes, metabolism, heart failure

Gareth Miles, University of St Andrews, St Andrews, United Kingdom
Motor systems of the brainstem and spinal cord, Motor neuron disease (MND), Ion channels in motor behaviours

Jenny Morton, University of Cambridge, Cambridge, United Kingdom
Huntington's disease (HD), mouse and sheep models of neurological diseases, sleep and circadian rhythm dysfunction in neurological disease, genetic neurological disorders

Elizabeth Murphy, National Heart Lung and Blood Institute, Bethesda, Maryland, USA
Mitochondria, ischemia-reperfusion, cardioprotection, S-nitrosylation. heart

Marco Narici, University of Padua, Padova, Italy
Muscle contractility, neuromuscular plasticity and function, regulation of skeletal muscle mass

Matthew Nolan, The University of Edinburgh, Edinburgh, United Kingdom
Cellular and Circuit mechanisms for spatial cognition and memory, Neurophysiology, Molecular circuit analysis, Computational neuroscience

Julian Paton, University of Bristol, Bristol, United Kingdom

Ole Paulsen, University of Cambridge, Cambridge, United Kingdom
Cellular neurophysiology, network oscillations and synaptic plasticity

Nicole Purcell, Huntington Medical Research Institutes, Pasadena, United States of America
Cardiac physiology, intracellular signaling pathways, MAP kinases, phosphatases, ischemia

Jane F. Reckelhoff, University of Mississippi Medical Center, Jackson, United States of America
Mechanisms responsible for the sex differences in blood pressure control and renal disease, postmenopausal hypertension, and polycystic ovary syndrome

Vera Regitz-Zagrosek, Charite University Hospital Berlin, Berlin, Germany
Cardiac physiology, Sex- and gender-specific differences in medicine

Richard Robitaille, University of Montreal Department of Neuroscience, Montréal, Canada
Synaptic physiology, glial modulation of synaptic plasticity, synapse-glial interactions, neuromuscular junctions, disorders at the neuromuscular junction in Amyotrophic Lateral Sclerosis, Schwann cells, astrocytes

Markus Rüegg, University of Basel, Basel, Switzerland
Muscle function, Metabolism, Development, NMJ

Klaus-Dieter Schlüter, University of Giessen, Gießen, Germany
Cardiac physiology, pro-hypertrophic signalling in ventricular cardiomyocytes

Stephanie Schorge, University College London, London, United Kingdom
Cellular physiology, Epilepsy, Cellular mechanisms underlying neurodegeneration, Ion channels in development and Neurological disorders

Rainer Schulz, University of Giessen Institute of Physiology, Gießen, Germany
Translational and cardiac physiology, myocardial ischemia/reperfusion injury (IRI), mitochondrial derived reactive oxygen species for IRI

Luca Scorrano, University of Padua, Padova, Italy
mitochondria; apoptosis; fusion-fission; endoplasmic reticulum; interorganelle communication.

Shey-Shing Sheu, Thomas Jefferson University, Philadelphia, United States of America
Molecular and cellular cardiac physiology, Mitochondrial calcium ion transport, Crosstalk signalling between mitochondrial calcium ions and reactive oxygen species (ROS), Mitochondrial fission, Fusion and quality control in heart cells

Godfrey Smith, University of Glasgow, Glasgow, United Kingdom
Cardiovascular physiology, excitation-contraction coupling of cardiac muscle

Osvaldo Uchitel, University of Buenos Aires, Buenos Aires, Argentina
Synaptic transmission, neuromuscular junctions, acetylcholine receptors, calcium channels, acid sensing ion channels

Tobias Wang, Aarhus University, Aarhus, Denmark
Comparative physiology, evolution of physiological systems amongst vertebrates, heart function in various animals

Susan Wray, University of Liverpool Institute of Translational Medicine, Liverpool, United Kingdom
Uterine contractility and smooth muscle research

Joseph C. Wu, Stanford Cardiovascular Institute, Stanford, United States of America
Cardiovascular diseases, Stem cells, Genomics, Drug discovery, Precision medicine

Caitlin Wyrrylw, University of Western Australia, School of Human Sciences, Crawley, Australia
Placenta, developmental programming, glucocorticoids, fetal development, pregnancy,

Rui Ping Xiao, NIA Laboratory of Experimental Gerontology, Baltimore, United States of America
Molecular physiology, beta-adrenergic receptor (AR) subtype signalling, insulin receptors, insulin resistance

Huang-Tian Yang, Shanghai Institute of Nutrition and Health, Chinese Academy of Sciences, Shanghai, China
Cardiac contractile function, Myocardial ischemia/reperfusion injury and protection, Myocardial repair, Stem cells

**Martin E. Young**, The University of Alabama at Birmingham, Birmingham, United States of America
**Yi Zhu**, Tianjin University, Tianjin, China

Cardiac physiology, signalling in endothelial activation and mechanism of atherogenesis, role of homodynamic forces in the focal feature of atherosclerosis
INTRODUCTION
The Current Opinion journals were developed out of the recognition that it is increasingly difficult for specialists to keep up to date with the expanding volume of information published in their subject. In the Current Opinion journals, we help the reader by providing in a systematic manner: (1) The views of experts on current advances in the field in a clear and readable form. (2) Evaluations of the most interesting papers, annotated by experts, from the great wealth of original publications.

The aim of the manuscript is to review recent articles, with particular emphasis on those articles published in the past two years. In addition to describing recent trends, you are encouraged to give your subjective opinion of the topics discussed, although you should not concentrate unduly on your own research. Your review should be approximately 2000 words (not including references or reference notes), with approximately 50 references and, as such, the review is intended to be a concise view of the field as it is at the moment, rather than a comprehensive overview. Our audience ranges from student to professor, so articles must be accessible to a wide readership. Please avoid jargon, but do not oversimplify: be accurate and precise throughout. Occasionally, unpublished data can be referred to, but only when essential and should never be used to substantiate any significant point.

Submission to this journal is by invitation only. Please contact your Editorial Manager by email if you have any questions.

Submission Checklist
You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

Ensure that the following items are present:

One author has been designated as the corresponding author with contact details:
• E-mail address
• Full postal address

All necessary files have been uploaded:
Manuscript:
• Include keywords
• All figures (include relevant captions)
• All tables (including titles, description, footnotes)
• Ensure all figure and table citations in the text match the files provided
• Indicate clearly if color should be used for any figures in print
Graphical Abstracts / Highlights files (where applicable)
Supplemental files (where applicable)

Further considerations
• Manuscript has been 'spell checked' and 'grammar checked'
• Self-citations should be kept to a minimum and not exceed 20% of the total number of listed references
• Permission has been obtained for use of copyrighted material from other sources (including the Internet)
• A competing interests statement is provided, even if the authors have no competing interests to declare
• Journal policies detailed in this guide have been reviewed
• Referee suggestions and contact details provided, based on journal requirements

For further information, visit our Support Center.

BEFORE YOU BEGIN
Ethics in publishing
Please see our information on Ethics in publishing.
Declaration of interest
All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential competing interests include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. Authors must disclose any interests in two places: 1. A summary declaration of interest statement in the title page file (if double anonymized) or the manuscript file (if single anonymized). If there are no interests to declare then please state this: 'Declarations of interest: none'. 2. Detailed disclosures as part of a separate Declaration of Interest form, which forms part of the journal's official records. It is important for potential interests to be declared in both places and that the information matches. More information.

Submission declaration and verification
Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify originality, your article may be checked by the originality detection service Crossref Similarity Check.

Preprints
Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see 'Multiple, redundant or concurrent publication' for more information).

Use of inclusive language
Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns (“clinicians, patients/clients”) as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

Author contributions
For transparency, we encourage authors to submit an author statement file outlining their individual contributions to the paper using the relevant CRediT roles: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; Writing - review & editing. Authorship statements should be formatted with the names of authors first and CRediT role(s) following. More details and an example

Authors
Please provide the names of all authors in full, including first name. No more than five authors should be listed (only those who contributed to the actual writing of the manuscript, rather than members of the laboratory contributing to primary work). Anyone else who contributed to the article can be thanked in the acknowledgements section.

Changes to authorship
Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed.
Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

**Copyright**
Upon acceptance of an article, authors will be asked to complete a 'Journal Publishing Agreement' (see more information on this). An e-mail will be sent to the corresponding author confirming receipt of the manuscript together with a 'Journal Publishing Agreement' form or a link to the online version of this agreement.

Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution and for all other derivative works, including compilations and translations. If excerpts from other copyrighted works are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has preprinted forms for use by authors in these cases.

For gold open access articles: Upon acceptance of an article, authors will be asked to complete a 'License Agreement' (more information). Permitted third party reuse of gold open access articles is determined by the author's choice of user license.

**Author rights**
As an author you (or your employer or institution) have certain rights to reuse your work. More information.

*Elsevier supports responsible sharing*
Find out how you can share your research published in Elsevier journals.

**Role of the funding source**
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement then this should be stated.

**Open access**
Please visit our Open Access page for more information.

*Elsevier Researcher Academy*
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

*Language (usage and editing services)*
Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the English Language Editing service available from Elsevier's Author Services.

**Submission**
Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

**PREPARATION**
Peer review
This journal operates a single anonymized review process. All contributions are typically sent to a minimum of one independent expert reviewer to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor’s decision is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal’s usual procedures, with peer review handled independently of the relevant editor and their research groups. More information on types of peer review.

Use of word processing software
It is important that the file be saved in the native format of the word processor used. The text should be in single-column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. In particular, do not use the word processor’s options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc. When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). Note that source files of figures, tables and text graphics will be required whether or not you embed your figures in the text. See also the section on Electronic artwork.

To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

Article structure
Subdivision - unnumbered sections
Divide your article into clearly defined sections. Each subsection is given a brief heading. Each heading should appear on its own separate line. Subsections should be used as much as possible when cross-referencing text: refer to the subsection by heading as opposed to simply 'the text'.

Introduction
The introduction should be accessible to a wide variety of scientists by avoiding the use of jargon and concepts not familiar to non-specialists. It should outline the time period covered and the scope of the review, including the importance of and rationale behind your article. The introduction should include only a few background references.

Main text of review
Use concise, logical subheadings to provide clear links between the different sections and guide the reader through your review. Please write all abbreviations in full on first use, and use the abbreviation thereafter.

Material and methods
Provide sufficient details to allow the work to be reproduced by an independent researcher. Methods that are already published should be summarized, and indicated by a reference. If quoting directly from a previously published method, use quotation marks and also cite the source. Any modifications to existing methods should also be described.

Theory/calculation
A Theory section should extend, not repeat, the background to the article already dealt with in the Introduction and lay the foundation for further work. In contrast, a Calculation section represents a practical development from a theoretical basis.

Results
Results should be clear and concise.

Discussion
This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.

Conclusions
The conclusions section should summarize the topics discussed and describe future directions, including the author’s opinions, as appropriate.
Appendices
If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

Essential title page information
• Title. Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
• Author names and affiliations. Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. You can add your name between parentheses in your own script behind the English transliteration. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.
• Corresponding author. Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. This responsibility includes answering any future queries about Methodology and Materials. Ensure that the e-mail address is given and that contact details are kept up to date by the corresponding author.
• Present/permanent address. If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

Highlights
Highlights are optional yet highly encouraged for this journal, as they increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the examples here: example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

Abstract
A concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s). Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

Graphical abstract
Although a graphical abstract is optional, its use is encouraged as it draws more attention to the online article. The graphical abstract should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: Please provide an image with a minimum of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. You can view Example Graphical Abstracts on our information site.

Authors can make use of Elsevier’s Illustration Services to ensure the best presentation of their images and in accordance with all technical requirements.

Keywords
Immediately after the abstract, provide a maximum of 6 keywords, using American spelling and avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

Abbreviations
Define abbreviations that are not standard in this field in a footnote to be placed on the first page of the article. Such abbreviations that are unavoidable in the abstract must be defined at their first mention there, as well as in the footnote. Ensure consistency of abbreviations throughout the article.
Acknowledgements
Collate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

Formatting of funding sources
List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, please include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Units
Follow internationally accepted rules and conventions: use the international system of units (SI). If other units are mentioned, please give their equivalent in SI.

Math formulae
Please submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., X/Y. In principle, variables are to be presented in italics. Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).

Footnotes
Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors build footnotes into the text, and this feature may be used. Should this not be the case, indicate the position of footnotes in the text and present the footnotes themselves separately at the end of the article.

Artwork
Figures
You are encouraged to include up to four additional elements in your review (i.e. a combination of Figures, Tables and Boxes). You should include at least one figure to summarize the main concepts discussed, and all figures should help to explain the concepts discussed in the text. All illustrations should be labelled as figures, and figures should be cited in the main text of the review in numerical order. Please note that it is the responsibility of the authors to obtain permission to reproduce copyrighted material (figures that have been published before) from the original authors and publishers.

Electronic artwork
General points
- Make sure you use uniform lettering and sizing of your original artwork.
- Embed the used fonts if the application provides that option.
- Aim to use the following fonts in your illustrations: Arial, Courier, Times New Roman, Symbol, or use fonts that look similar.
- Number the illustrations according to their sequence in the text.
- Use a logical naming convention for your artwork files.
- Provide captions to illustrations separately.
- Size the illustrations close to the desired dimensions of the published version.
- Submit each illustration as a separate file.
- Ensure that color images are accessible to all, including those with impaired color vision.

A detailed guide on electronic artwork is available.
You are urged to visit this site; some excerpts from the detailed information are given here.

Formats
If your electronic artwork is created in a Microsoft Office application (Word, PowerPoint, Excel) then please supply 'as is' in the native document format.

Regardless of the application used other than Microsoft Office, when your electronic artwork is finalized, please 'Save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):

- EPS (or PDF): Vector drawings, embed all used fonts.
- TIFF (or JPEG): Color or grayscale photographs (halftones), keep to a minimum of 300 dpi.
- TIFF (or JPEG): Bitmapped (pure black & white pixels) line drawings, keep to a minimum of 1000 dpi.
- TIFF (or JPEG): Combinations bitmapped line/halftone (color or grayscale), keep to a minimum of 500 dpi.

Please do not:
- Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); these typically have a low number of pixels and limited set of colors;
- Supply files that are too low in resolution;
- Submit graphics that are disproportionately large for the content.

Color artwork
Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF) or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these figures will appear in color online (e.g., ScienceDirect and other sites) in addition to color reproduction in print. Further information on the preparation of electronic artwork.

Illustration services
Elsevier's Author Services offers Illustration Services to authors preparing to submit a manuscript but concerned about the quality of the images accompanying their article. Elsevier's expert illustrators can produce scientific, technical and medical-style images, as well as a full range of charts, tables and graphs. Image 'polishing' is also available, where our illustrators take your image(s) and improve them to a professional standard. Please visit the website to find out more.

Figure captions
Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

Tables
Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

References
Citation in text
Self-citations should be kept to a minimum and not exceed 20% of the total number of listed references. Excessive self-citations will be removed. Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.

Reference links
Increased discoverability of research and high quality peer review are ensured by online links to the sources cited. In order to allow us to create links to abstracting and indexing services, such as Scopus, CrossRef and PubMed, please ensure that data provided in the references are correct. Please note that incorrect surnames, journal/book titles, publication year and pagination may prevent link creation. When copying references, please be careful as they may already contain errors. Use of the DOI is highly encouraged.
A DOI is guaranteed never to change, so you can use it as a permanent link to any electronic article. An example of a citation using DOI for an article not yet in an issue is: VanDecar J.C., Russo R.M., James D.E., Ambeh W.B., Franke M. (2003). Aseismic continuation of the Lesser Antilles slab beneath northeastern Venezuela. Journal of Geophysical Research, https://doi.org/10.1029/2001JB000884. Please note the format of such citations should be in the same style as all other references in the paper.

**Web references**

As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

**Data references**

This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

**References in a special issue**

Please ensure that the words ‘this issue’ are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

**Reference management software**

Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley and Zotero, as well as EndNote. Using the word processor plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal's style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide.

Users of Mendeley Desktop can easily install the reference style for this journal by clicking the following link:

http://open.mendeley.com/use-citation-style/current-opinion-in-physiology

When preparing your manuscript, you will then be able to select this style using the Mendeley plugins for Microsoft Word or LibreOffice.

**Reference formatting**

There are no strict requirements on reference formatting at submission. References can be in any style or format as long as the style is consistent. Where applicable, author(s) name(s), journal title/book title, chapter title/article title, year of publication, volume number/book chapter and the article number or pagination must be present. Use of DOI is highly encouraged. The reference style used by the journal will be applied to the accepted article by Elsevier at the proof stage. Note that missing data will be highlighted at proof stage for the author to correct. If you do wish to format the references yourself they should be arranged according to the following examples:

**Annotations**

The majority of the references (please aim to cite approximately 50) should come from the period under review (i.e. the past two years) and, in general, at least 10% of these should be selected and annotated as being papers of special interest (*) or outstanding interest (**). Annotated references MUST be from the past two years, and the annotation should provide a brief description of the major findings and the importance of the study. This is an essential part of each review and is very popular with our readers.

For example:

Using class I tetramers, the authors demonstrate that insulin-specific CD8+ T cells account for a large proportion of infiltrated T cells in the islets of prediabetic NOD mice. This is the first study to use peptide multimers to decipher the mechanism of autoimmunity.
Exclude from reference list
Unpublished data or articles (including papers on preprint servers, papers in preparation, papers submitted for publication, and personal communications), conference abstracts, PhD theses, websites/URLs and computer programs/databases should not be mentioned in the reference list. If you feel that the citation is crucial to the review, please mention it in the text only (see below). Please keep in mind that citations should be restricted to sources freely available to most readers (if a submitted paper is accepted for publication before we go to press, then this information can be added in an 'Update' section). These references should be presented in the text as follows (please list the first author only, including initials and surname): Personal communications: (SW Churchill et al., personal communication [or unpublished if referring to the authors' own work]). Note that personal communications must be authorised by those involved. You are responsible for obtaining permission to use personal communications. Submitted papers/unpublished data: (IMN Author et al., unpublished) or (IMN Author et al., bioRxiv doi: 10.1101/123456) Abstracts (give full information but not title): (A Early et al., abstract 54, 3rd International Meeting of Cellular Immunology, Washington DC, September 1998) or (A Early, abstract in Soc Neurosci Abstr 1998, 4:154). PhD theses: (R Arthur Goode, PhD thesis, University of Hawaii, 1988) Websites: (Biological Biochemical Image Database; URL: http://bbid.grc.nia.nih.gov/) Computer program/database: (Actin database, University of Harvard) (Unless the program/database details have been published, in which case cite as a normal reference. For example, Nicholls A, Bharadwaj R, Honig B: GRASP: a graphical representation and analysis of surface properties. Biophys J 1993, 64:166-170.)

Journal abbreviations source
Journal names should be abbreviated according to the List of Title Word Abbreviations.

Video
Elsevier accepts video material and animation sequences to support and enhance your scientific research. Authors who have video or animation files that they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table by referring to the video or animation content and noting in the body text where it should be placed. All submitted files should be properly labeled so that they directly relate to the video file's content. In order to ensure that your video or animation material is directly usable, please provide the file in one of our recommended file formats with a preferred maximum size of 150 MB per file, 1 GB in total. Video and animation files supplied will be published online in the electronic version of your article in Elsevier Web products, including ScienceDirect. Please supply 'stills' with your files: you can choose any frame from the video or animation or make a separate image. These will be used instead of standard icons and will personalize the link to your video data. For more detailed instructions please visit our video instruction pages. Note: since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and the print version for the portions of the article that refer to this content.

Supplementary material
Supplementary material such as applications, images and sound clips, can be published with your article to enhance it. Submitted supplementary items are published exactly as they are received (Excel or PowerPoint files will appear as such online). Please submit your material together with the article and supply a concise, descriptive caption for each supplementary file. If you wish to make changes to supplementary material during any stage of the process, please make sure to provide an updated file. Do not annotate any corrections on a previous version. Please switch off the 'Track Changes' option in Microsoft Office files as these will appear in the published version.

AFTER ACCEPTANCE
Proofs
One set of page proofs (as PDF files) will be sent by e-mail to the corresponding author (if we do not have an e-mail address then paper proofs will be sent by post) or a link will be provided in the e-mail so that authors can download the files themselves. To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Elsevier now provides authors with PDF proofs which can be annotated; for this you will need to download the free Adobe Reader, version 9 (or higher). Instructions on how to annotate PDF files will accompany the proofs (also given online). The exact system requirements are given at the Adobe site. If you do not wish to use the PDF annotations function, you may list the corrections (including replies to the Query Form) and return them to Elsevier in an e-mail. Please list your corrections quoting line number. If, for any reason, this is not possible, then mark the corrections and any other comments
(including replies to the Query Form) on a printout of your proof and scan the pages and return via e-mail. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. We will do everything possible to get your article published quickly and accurately. It is important to ensure that all corrections are sent back to us in one communication: please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

**Offprints**
The corresponding author, at no cost, will be provided with a PDF file of the article via e-mail (the PDF file is a watermarked version of the published article and includes a cover sheet with the journal cover image and a disclaimer outlining the terms and conditions of use). For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Both corresponding and co-authors may order offprints at any time via Elsevier's Author Services.

**AUTHOR INQUIRIES**
Visit the Elsevier Support Center to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch. You can also check the status of your submitted article or find out when your accepted article will be published.
