DESCRIPTION

Current Research in Insect Science (CRIS) is a selective gold open access journal from Elsevier. CRIS publishes original research articles, brief communications, methods reports, review articles, and graphical review articles, covering all aspects of the broad discipline of insect science.

Current Research in Insect Science is a peer-reviewed gold open access (OA) journal and upon acceptance all articles are permanently and freely available. It is a companion to the highly regarded review journal Current Opinion in Insect Science and is part of the Current Opinion and Research (CO +RE) suite of journals. All CO+RE journals leverage the Current Opinion legacy-of editorial excellence, high-impact, and global reach-to ensure they are a widely read resource that is integral to scientists' workflow.

Current Research in Insect Science covers any aspect of insect science that will be of interest to the wide insect science community, from molecular biology to macroecology, and from evolutionary systematics to pest management. We welcome both applied and fundamental science from anywhere in the world, and aim to be a go-to venue to foster interactions among a broad range of insect scientists based on publishing quality work from across the discipline. Papers on non-insect terrestrial arthropods, including arachnids, myriapods, and terrestrial crustaceans will be considered if thought to be of sufficient interest to the journal readers.

CRIS is highly selective, currently accepting less than 20 % of submitted articles. Manuscripts suitable for CRIS are significant studies of broad interest to an international audience. Important preliminary studies may be appropriate for submission as brief communications. Confirmatory studies, studies of only local interest, or descriptive faunistics or taxonomies without broad significance are generally not appropriate for the journal.

Current Research in Insect Science builds on Elsevier's reputation for excellence in scientific publishing.

Expertise - Editors and Editorial Board bring depth and breadth of expertise and experience to the journal. Efficiency - Submission and editorial screening are fast, and peer review and decision-making prioritizes constructive, collaborative feedback to ensure that published papers are of the highest quality. We aim to respect our authors' efforts and our reviewers' time, and to promote and respect Equity, Diversity, and Inclusiveness in all the journal's activities. Discoverability - Articles get high visibility and maximum exposure on an industry-leading platform that reaches a vast global audience.
Ethics in Publishing: General Statement

The Editor(s) and Publisher of this Journal believe that there are fundamental principles underlying scholarly or professional publishing. For more information, please refer to conflicts of interest.

As with all Elsevier journals, Current Research in Insect Science is a member of the Committee of Publication Ethics (COPE) and adheres to the highest standards in publication ethics.

ABSTRACTING AND INDEXING

Directory of Open Access Journals (DOAJ)
Scopus

EDITORIAL BOARD

Editor-in-Chief
Brent J. Sinclair, Western University Department of Biology, London, Ontario, Canada
Thermal biology, overwintering biology, energetics and metabolism, invasive species, polar biology, molecular physiology, Insect physiology

Special Content Editor
Margarita Lopez-Uribe, The Pennsylvania State University, University Park, Pennsylvania, United States of America
Population genetics, phylogeography, evolutionary ecology, pollinator health

Editorial Board Members
Ehab Abouheif, McGill University, Department of Biology, Montréal, Quebec, Canada
ants, evolutionary-developmental biology

Spencer T. Behmer, Texas A&M University, Department of Entomology, College Station, Texas, United States of America
Physiology, ecology, behavior, nutrition and insects

John C. Beier, University of Miami School of Medicine, Miami, Florida, United States of America
Environmental management, Vector-borne diseases, Mosquitoes, Transmission dynamics

Xavier Belles, Institute of Evolutionary Biology, Barcelona, Spain
Insect metamorphosis, insect endocrinology (especially juvenile hormone and ecdysone), insect development, insect evolution

Giovanni Benelli, University of Pisa, Department of Agriculture, Food and Environment, Pisa, Italy
Insect behavior, Insect-inspired robotics, and biological control, Covering agricultural pests as well as vectors of medical and veterinary importance

Himender Bharti, Punjabi University, Patiala, India
Insect Systematics, Phylogenetics, Evolutionary Biology, Ecology, Eco-evolutionary dynamics

Guy Bloch, Hebrew University of Jerusalem, Jerusalem, Israel
Social insects, chronobiology, insect endocrinology

Carol L. Boggs, University of South Carolina, Columbia, South Carolina, United States of America
Physiological ecology, life history, resource acquisition and allocation, population dynamics, climate change

Jenn Brisson, University of Rochester, Rochester, New York, United States of America
Phenotypic plasticity, evo-devo

Thomas Buckley, Landcare Research New Zealand, Lincoln, New Zealand
Systematics, phylogeography, evolution, biodiversity, genomics

Arianna Cease, Arizona State University School of Sustainability, Tempe, Arizona, United States of America
Locusts, orthoptera, environmental physiology, population ecology, ecosystem ecology

Maohua Chen, Northwest A&F University, Yangling, China
Agricultural insects, Insecticide resistance, Insect population genetics, Aphid biology, Fruit borer biology, IPM, Insect molecular biology

Nicolas Desneux, National Research Institute for Agriculture Food and Environment SPE Department, Sophia Antipolis, France
Pesticides, pest management, invasive species, parasitic wasps

Evan P. Economo, Okinawa Institute of Science and Technology Graduate University, Biodiversity and Biocomplexity Unit, Okinawa, Japan
Ants, biodiversity, ecoinformatics, morphometrics

Lauren Esposito, California Academy of Sciences, San Francisco, California, United States of America
Arachnology, systematics, biogeography, phylogenetics, collections, evolution

John Ewer, Valparaiso University, Valparaiso, Chile
Behavior genetics, neuroscience, endocrinology, development, drosophila

Susan E. Fahrbach, Wake Forest University, Department of Biology, Winston-Salem, North Carolina, United States of America
Neuroscience, development, endocrinology, apis mellifera, Learning and memory

Jennifer Fewell, Arizona State University School of Life Sciences, Tempe, Arizona, United States of America
Social evolution, behavioral ecology of social insects, division of labor

Eran Gefen
Environmental physiology, water balance, gas exchange, energetics, scorpions

Yuval Gottlieb, Hebrew University of Jerusalem, Jerusalem, Israel
Arthropod symbiosis (e.g. nutritional symbiosis, defence symbiosis, reproductive manipulations), veterinary entomology (e.g. vector ecology, vector borne diseases)

Alessandra Guarneri, Oswaldo Cruz Foundation Rene Rachou Institute, BELO HORIZONTE, Brazil
Insect-parasite interaction, Behaviour, Triatomines, Trypanosome, Vector-borne diseases

Daniel A. Hahn, University of Florida, Department of Entomology and Nematology, Gainesville, Florida, United States of America
Metabolism, seasonal biology, pest management, evolutionary physiology

Murray B. Isman, The University of British Columbia, Vancouver, British Columbia, Canada
Botanical insecticides, Antifeedants, Essential oils, Insect-plant chemical interactions, Insect toxicology

Le Kang, Institute of Zoology Chinese Academy of Sciences, Beijing, China
Ecological genomics, Phenotypic Plasticity, Epigenetics, Molecular evolution, Ecology, Entomology

Nusha Keyghobadi, Western University, London, Ontario, Canada
Conservation, landscape genetics, population genetics

Fathiya M. Khamis, International Centre for Insect Physiology and Ecology, Nairobi, Kenya
Molecular Biology, IPM, Microbiome

Claudio Lazzari, University of Tours, Tours, France
vector biology, neuro-ethology, insect physiology

Hongmei Li-Byarlay, Central State University, Wilberforce, Ohio, United States of America
Insect functional genomics, epigenomics, genomics, behavioral genetics, social insects, molecular biology, ageing, and physiology

Volker Loeschcke, Aarhus University, Department of Ecoscope, Aarhus, Denmark
Adaptation to stressful environments, thermal adaptation, phenotypic plasticity

Carl Lowenberger, Simon Fraser University, Burnaby, British Columbia, Canada
Insect-parasite/pathogen interactions, host innate immune response, arboviruses, mosquitoes, kissing bugs

Chun-Sen Ma, Chinese Academy of Agricultural Sciences Institute of Plant Protection, Beijing, China
Climate change ecology, Thermal biology, Modeling of population dynamics, Pest management

Katie Marshall, The University of British Columbia, Vancouver, British Columbia, Canada
Ecophysiology, thermal biology, repeated stress, biochemistry, macrophysiology

Natasha Mhatre, Western University, Department of Biology, London, Ontario, Canada
Biophysics of sound and vibration communication, Mechanics of hearing, Sensory ecology, Embodied perception, Sensorimotor interactions

Corrie S. Moreau, Cornell University, Department of Entomology, Ithaca, New York, United States of America
Ants, evolutionary biology, microbiota, molecular systematics, phylogenomics, biogeography, symbioses, tropical biology

Courtney Murdock, Cornell University, Department of Entomology, Ithaca, New York, United States of America
Ecology, Evolution, Host-parasite interactions, Ecoimmunology, Ecophysiology, Mosquito-borne disease, Virus, Malaria, Population dynamics

Esther Ndumi Ngumbi, University of Illinois Urbana-Champaign, Urbana, Illinois, United States of America
Chemical ecology, plant growth-promoting rhizobacteria, behavior, microbe-plant-insect interactions

Jinzhi Niu, Southwest University College of Plant Protection, Chongqing, China
Aphids, Spider mites, insect virus ecology, coevolution, pollination, rna based pest control

Sheila Ons, National University of La Plata Regional Centre of Genomic Studies, La Plata, Argentina
Insect Cience, Detoxification, Insecticide resistance, Neuropeptides, Neuroendocrinology, Bioinformatics

Francesco Pennacchio, University of Napoli Federico II, Department of Agriculture, Portici, Italy

Carla Sgrò, Monash University, Genetics, Evolution, Biodiversity and Climate Change Research Group, Victoria, Australia
Drosophila, collombola, climate change, quantitative genetics, evolutionary genetics

Kimberly Sheldon, The University of Tennessee Knoxville, Knoxville, Tennessee, United States of America
Species distribution, tropical beetles, climate change, macroecology

Anne Simon, Western University, London, Ontario, Canada
Drosophila neuroscience and behavior

Emilie Snell-Rood, University of Minnesota Twin Cities College of Biological Sciences, Saint Paul, Minnesota, United States of America
Developmental plasticity, anthropogenic effects (especially of salt and heavy metals), behaviour

Zainulabeuddin Syed, University of Kentucky, Lexington, Kentucky, United States of America
Chemical ecology, molecular evolution, functional genomics, olfaction, chemosensation, neurobiology

John S. Terblanche, Stellenbosch University, Stellenbosch, South Africa
Environmental physiology, evolutionary physiology, thermal tolerance, metabolic rate, water balance, physiological ecology, applied entomology, invasion biology

Ross Thompson, University of Canberra, Canberra, Australia
Food web ecology, anthropogenic biomes, aquatic biodiversity, urban and rural ecosystems

Sherah Vanlaerhoven, University of Windsor, Department of Integrative Biology, Windsor, Ontario, Canada
Forensic entomology

Jessica Ware, American Museum of Natural History, New York, New York, United States of America
odonata, blattodea, evolution, genomics, genetics, morphology, phylogeny

Priscilla M. Wehi, Landcare Research New Zealand, Lincoln, New Zealand
Ecology, traditional indigenous knowledge

Caroline Williams, University of California Berkeley, Berkeley, California, United States of America
Overwintering biology, evolutionary ecology, energetics, evolutionary physiology

Mariana Federica Wolfner, Cornell University, Ithaca, New York, United States of America
Reproduction particularly in insects, genetics, fertilization, seminal proteins, evolution, early development

Chun Nin Adam Wong, University of Florida, Department of Entomology and Nematology, Gainesville, Florida, United States of America
Microbiota, drosophila, disease models, behavior, nutrition, omics

Sarah Hollis Woodward, University California Riverside, Department of Entomology, Riverside, California, United States of America
entomology, genomics, behavior

Yi-Dong Wu, Nanjing Agricultural University College of Plant Protection, Nanjing, China
Insecticide toxicology, Insect resistance to Bacillus thuringiensis toxins, Insect resistance to chemical insecticides, Insect genetics and genomics

Dong Zhang, Beijing Forestry University, Beijing, China

Diptera, phylogeny, morphology, barcoding
GUIDE FOR AUTHORS

INTRODUCTION

Current Research in Insect Science (CRIS) is a new primary research, gold open access journal from Elsevier. CRIS publishes research articles, brief communications, and methods reports covering all aspects of the broad discipline of insect science.

Current Research in Insect Science is a peer-reviewed gold open access (OA) journal and upon acceptance all articles are permanently and freely available. It is a companion to the highly regarded review journal Current Opinion in Insect Science and is part of the Current Opinion and Research (CO +RE) suite of journals. All CO+RE journals leverage the Current Opinion legacy-of editorial excellence, high-impact, and global reach-to ensure they are a widely read resource that is integral to scientists’ workflow.

Current Research in Insect Science covers any aspect of insect science that will be of interest to the wide insect science community, from molecular biology to macroecology, and from evolutionary systematics to pest management. We welcome both applied and fundamental science from anywhere in the world, and aim to be a go-to venue to foster interactions among a broad range of insect scientists based on publishing quality work from across the discipline. Papers on non-insect terrestrial arthropods, including arachnids, myriapods, and terrestrial crustaceans will be considered if thought to be of sufficient interest to the journal readers. CRIS is highly selective, currently accepting less than 20% of submitted articles. Manuscripts suitable for CRIS are significant studies of broad interest to an international audience. Important preliminary studies may be appropriate for submission as brief communications. Confirmatory studies, studies of only local interest, or descriptive faunistics or taxonomies without broad significance are generally not appropriate for the journal.

Editor’s Guide for Submissions

Submitting to CRIS is easy! We have developed a handy guide so you have everything ready for the initial submission of your article. Click Here

Types of article

The Journal publishes Research Papers, Short Communications, Methods reports, Full-length Review articles, and Graphical Reviews. We support the "Your Paper Your Way" Elsevier guideline which allows authors to submit their main manuscript file without any formatting requirements.

Research articles - full length, in-depth studies of broad significance to insect science. They are not limited in size. However, we do strongly recommend to authors to be as succinct as possible in the best interest of the readers and the dissemination of the work.

Short communications - short articles describing significant new findings and observations. They have the following soft limits. The manuscript should ideally contain no more than 4-6 Figures/Tables and 4000 words, including the title page, all sections of the manuscript (including the references), and Figure/Table legends. The abstract should be limited to 200 words.

Methods reports - descriptions of novel or newly-optimised methods with broad applicability to entomologists. Maximum 2500 words excluding title, abstract, references, tables, and figure captions; maximum of four displays (tables or figures). Results and Discussion are usually combined. Must include a detailed step-by-step protocol and/or analysis code in the supplementary material.

Graphical Reviews

Graphical Reviews: A new way to publish your research are a short, structured article type, which primarily use illustrative schematic summaries to convey only key concepts and novel ideas on a major research interest. GRs present an opportunity to succinctly showcase your research contributions within a wider overview of recent developments within a field. GRs are designed to communicate information in a visually appealing representation of the current state of research on a specific topic. The overall message should be accessible to a broad scientific audience. GRs have a format of 3-5 (color) schemes/figures, ideally formatted as easily downloadable (PowerPoint) slides or the like, for use by readers for educational purposes. The text body should provide the reader with 'backbone' information and context, connecting the material presented in the figures. GRs cannot include unpublished data, new hypotheses, formal mathematical models, or meta-analysis.
GR article structure: Abstract: up to 250 words Body (exclusive of figure legends): up to 2000 words, double-spaced, Arial font, size 11 3-5 color schemes/figures summarizing the state of the specific topic covered. Each figure needs to be self-explanatory, including sufficient annotations to allow the readers to quickly grasp the content of the figure. Figure legends must be straight to the point, providing additional details which deepen the message of the figure itself. Please ensure that the reader, who may not be a direct expert in the field, can easily grasp the information provided References: no more than 25 key articles that exemplify the most significant recent advances in the field Illustrations: Authors are expected to use their own illustration resources. They may also make use of Elsevier's Illustration Services to ensure the best presentation of their images, in accordance with all technical requirements.

An example of a GR is available here

**Review Articles**

**Current Research Review Article Type**

Before submitting a review, you are encouraged to present a pre-submission proposal to the editorial office (cris-me@elsevier.com) for approval. This proposal would typically include a cover letter explaining the purpose and originality of your review, a tentative abstract or outline, and a planned submission date. These are the criteria for consideration:

**Length** Typically, authors choose to submit 2-4 figures and 22-32 pages of text (standard font size and double spacing) as a full-length review. We recommend 6,000-10,000 words but leave the length entirely up to you.

**Coverage** Please feel free to decide the exact scope of your review and depth of coverage, keeping in mind that the overall message should be accessible to the broad readership of the journal. We would like to ask you to approach your review as a critical overview of the field, with a strong focus on current challenges and bottlenecks to future advances. Please make sure to adopt a mechanistic viewpoint where possible. The review must represent a fair coverage of the most recent advances and relevant approaches and accommodate different points of view. The scope of the review should stand out from other recently published reviews on the same theme. Please also feel free to highlight areas that you think deserve more attention from the scientific community. Finally, we would encourage you to include an ‘outlook’ paragraph at the end of your review that proposes the future direction you personally consider the field should take and the prospects for useful applications you might expect to see in the near future and beyond.

**Figures and References** We strongly encourage the use of summary illustrations which may serve as an easy reference to readers to understand the message of the overall messages relayed in the review. We would like to discourage listing too many References, but only cite directly relevant literature published in the recent years. A primary research result used in a review should reference the original research article, not another review.

**Submission Checklist**

You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

**Ensure that the following items are present:**

One author has been designated as the corresponding author with contact details:

- E-mail address
- Full postal address

All necessary files have been uploaded:

**Cover Letter**

In your cover letter, please provide a brief justification for why you have submitted this manuscript to Current Research in Insect Science: A brief statement (2-3 sentences) explaining why your research addresses an important question or topic. A brief statement (2-3 sentences) explaining why your study is novel and why the results are important. A brief statement (1-2 sentences) explaining why this work will be of interest to a broad range of insect scientists.
Manuscript: Include keywords. All figures (include relevant captions) All tables (including titles, description, footnotes) Ensure all figure and table citations in the text match the files provided Include a data availability statement.

Graphical Abstracts / Highlights files (where applicable)

Supplemental files (where applicable)

Further considerations
Manuscript has been 'spell checked' and 'grammar checked'. All references mentioned in the Reference List are cited in the text, and vice versa. Permission has been obtained for use of copyrighted material from other sources (including the Internet). A competing interests statement is provided, even if the authors have no competing interests to declare. Journal policies detailed in this guide have been reviewed. Referee suggestions and contact details provided, based on journal requirements.

For further information, visit our Support Center.

BEFORE YOU BEGIN

Ethics in publishing
Please see our information on Ethics in publishing.

Studies in humans and animals
If the work involves the use of human subjects, the author should ensure that the work described has been carried out in accordance with The Code of Ethics of the World Medical Association (Declaration of Helsinki) for experiments involving humans. The manuscript should be in line with the Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals and aim for the inclusion of representative human populations (sex, age and ethnicity) as per those recommendations. The terms sex and gender should be used correctly.

Authors should include a statement in the manuscript that informed consent was obtained for experimentation with human subjects. The privacy rights of human subjects must always be observed.

All animal experiments should comply with the ARRIVE guidelines and should be carried out in accordance with the U.K. Animals (Scientific Procedures) Act, 1986 and associated guidelines, EU Directive 2010/63/EU for animal experiments, or the National Research Council's Guide for the Care and Use of Laboratory Animals and the authors should clearly indicate in the manuscript that such guidelines have been followed. The sex of animals must be indicated, and where appropriate, the influence (or association) of sex on the results of the study.

Declaration of competing interest
All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. Authors should complete the declaration of competing interest statement using this template and upload to the submission system at the Attach/Upload Files step. Note: Please do not convert the .docx template to another file type. Author signatures are not required. If there are no interests to declare, please choose the first option in the template. More information.

Declaration of generative AI in scientific writing
The below guidance only refers to the writing process, and not to the use of AI tools to analyse and draw insights from data as part of the research process.

Where authors use generative artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should only use these technologies to improve readability and language. Applying the technology should be done with human oversight and control, and authors should carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or biased. AI and AI-assisted technologies should not be listed as an author or co-author, or be cited as an author. Authorship implies responsibilities and tasks that can only be attributed to and performed by humans, as outlined in Elsevier’s AI policy for authors.
Authors should disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

**Disclosure instructions**
Authors must disclose the use of generative AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in the core manuscript file, before the References list. The statement should be placed in a new section entitled ‘Declaration of Generative AI and AI-assisted technologies in the writing process’.

*Statement: During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.*

This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, there is no need to add a statement.

**Submission declaration and verification**
Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify compliance, your article may be checked by Crossref Similarity Check and other originality or duplicate checking software.

**Preprints**
Please note that preprints can be shared anywhere at any time, in line with Elsevier’s sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see ‘Multiple, redundant or concurrent publication’ for more information).

**Preprint posting on SSRN**
In support of Open Science, this journal offers its authors a free preprint posting service. Preprints provide early registration and dissemination of your research, which facilitates early citations and collaboration.

During submission to Editorial Manager, you can choose to release your manuscript publicly as a preprint on the preprint server SSRN once it enters peer-review with the journal. Your choice will have no effect on the editorial process or outcome with the journal. Please note that the corresponding author is expected to seek approval from all co-authors before agreeing to release the manuscript publicly on SSRN.

You will be notified via email when your preprint is posted online and a Digital Object Identifier (DOI) is assigned. Your preprint will remain globally available free to read whether the journal accepts or rejects your manuscript.

For more information about posting to SSRN, please consult the SSRN Terms of Use and FAQs.

**Reporting sex- and gender-based analyses**

**Reporting guidance**
For research involving or pertaining to humans, animals or eukaryotic cells, investigators should integrate sex and gender-based analyses (SGBA) into their research design according to funder/sponsor requirements and best practices within a field. Authors should address the sex and/or gender dimensions of their research in their article. In cases where they cannot, they should discuss this as a limitation to their research's generalizability. Importantly, authors should explicitly state what definitions of sex and/or gender they are applying to enhance the precision, rigor and reproducibility of their research and to avoid ambiguity or conflation of terms and the constructs to which they refer (see Definitions section below). Authors can refer to the Sex and Gender Equity in Research (SAGER) guidelines and the SAGER guidelines checklist. These offer systematic approaches to the use
and editorial review of sex and gender information in study design, data analysis, outcome reporting and research interpretation - however, please note there is no single, universally agreed-upon set of guidelines for defining sex and gender.

Definitions
Sex generally refers to a set of biological attributes that are associated with physical and physiological features (e.g., chromosomal genotype, hormonal levels, internal and external anatomy). A binary sex categorization (male/female) is usually designated at birth ("sex assigned at birth"), most often based solely on the visible external anatomy of a newborn. Gender generally refers to socially constructed roles, behaviors, and identities of women, men and gender-diverse people that occur in a historical and cultural context and may vary across societies and over time. Gender influences how people view themselves and each other, how they behave and interact and how power is distributed in society. Sex and gender are often incorrectly portrayed as binary (female/male or woman/man) and unchanging whereas these constructs actually exist along a spectrum and include additional sex categorizations and gender identities such as people who are intersex/have differences of sex development (DSD) or identify as non-binary. Moreover, the terms "sex" and "gender" can be ambiguous—thus it is important for authors to define the manner in which they are used. In addition to this definition guidance and the SAGER guidelines, the resources on this page offer further insight around sex and gender in research studies.

Author contributions
For transparency, we require corresponding authors to provide co-author contributions to the manuscript using the relevant CRediT roles. The CRediT taxonomy includes 14 different roles describing each contributor’s specific contribution to the scholarly output. The roles are: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; and Writing - review & editing. Note that not all roles may apply to every manuscript, and authors may have contributed through multiple roles. More details and an example.

Changes to authorship
Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed. Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

Article transfer service
This journal uses the Elsevier Article Transfer Service to find the best home for your manuscript. This means that if an editor feels your manuscript is more suitable for an alternative journal, you might be asked to consider transferring the manuscript to such a journal. The recommendation might be provided by a Journal Editor, a dedicated Scientific Managing Editor, a tool assisted recommendation, or a combination. If you agree, your manuscript will be transferred, though you will have the opportunity to make changes to the manuscript before the submission is complete. Please note that your manuscript will be independently reviewed by the new journal. More information.

Elsevier supports responsible sharing
Find out how you can share your research published in Elsevier journals.

Role of the funding source
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement, it is recommended to state this.
Open access
Please visit our Open Access page for more information.

Creative Commons Attribution-NonCommercial-NoDerivs (CC BY-NC-ND)
For non-commercial purposes, let others distribute and copy the article, and to include in a collective work (such as an anthology), as long as they credit the author(s) and provided they do not alter or modify the article.

The gold open access publication fee for this journal can be referred here https://www.elsevier.com/journals/current-research-in-insect-science/2666-5158/open-access-journal Learn more about Elsevier's pricing policy: https://www.elsevier.com/openaccesspricing.

Elsevier Researcher Academy
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The “Learn” environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

Language (usage and editing services)
Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the Language Editing service available from Elsevier's Language Services.

Submission
Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

Suggesting reviewers
Please submit the names and institutional e-mail addresses of several potential reviewers. You should not suggest reviewers who are colleagues, or who have co-authored or collaborated with you during the last three years. Editors do not invite reviewers who have potential competing interests with the authors. Further, in order to provide a broad and balanced assessment of the work, and ensure scientific rigor, please suggest diverse candidate reviewers who are located in different countries/regions from the author group. Also consider other diversity attributes e.g. gender, race and ethnicity, career stage, etc. Finally, you should not include existing members of the journal's editorial team, of whom the journal are already aware.

Note: the editor decides whether or not to invite your suggested reviewers.

PREPARATION

Queries
For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

Peer review
This journal operates a single anonymized review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal's usual procedures, with peer review handled independently of the relevant editor and their research groups. More information on types of peer review.
Appeals statement
If you believe that the editorial decision about your manuscript was based on factual errors, please visit our Support Center. Please state the manuscript number and describe in detail why you believe the decision was erroneous. Your appeal will be evaluated by the Editor-in-Chief, who will revisit the previous decision in light of your comments. Please note that we do not allow multiple appeals: a second decision will be final.

Special Issues and Article Collections
The peer review process for Special Issues and Article Collections is also a single-anonymized peer review process. All contributions will be initially assessed by the Editor-in-Chief for suitability for the journal. Papers deemed suitable are then assigned to an external Guest Editor. All Guest Editors receive training on conducting peer review. The Guest Editor sends the manuscript to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Guest Editor then makes a decision recommendation to the primary Editor, i.e. Editor-in-Chief, according to reviewer reports. The Editor-in-Chief is responsible for making the final decision regarding acceptance or rejection of articles and overseeing the peer review process of all Special Issues and Articles Collections to ensure high standards of publishing ethics and responsiveness. Guest Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the Guest Editor has an interest. Any such submission is subject to all of the journal’s usual procedures, with peer review handled independently of the relevant Editor and their research groups. Current Research in Insect Science will occasionally publish joint article collections in collaboration with other Elsevier journals, presenting papers that have been published in Current Research in Insect Science and the other partner title(s). This can be the case when several journals are covering one conference, or/and are publishing novel articles around one same topic.

Use of word processing software
It is important that the file be saved in the native format of the word processor used. The text should be in single-column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. In particular, do not use the word processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc. When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). Note that source files of figures, tables and text graphics will be required whether or not you embed your figures in the text. See also the section on Electronic artwork.

To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

Article structure
Subdivision - numbered sections
Divide your article into clearly defined and numbered sections. Subsections should be numbered 1.1 (then 1.1.1, 1.1.2, …), 1.2, etc. (the abstract is not included in section numbering). Use this numbering also for internal cross-referencing: do not just refer to ’the text’. Any subsection may be given a brief heading. Each heading should appear on its own separate line.

Introduction
State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results.

Material and methods
Provide sufficient details to allow the work to be reproduced by an independent researcher. Methods that are already published should be summarized, and indicated by a reference. If quoting directly from a previously published method, use quotation marks and also cite the source. Any modifications to existing methods should also be described.

Theory/calculation
A Theory section should extend, not repeat, the background to the article already dealt with in the Introduction and lay the foundation for further work. In contrast, a Calculation section represents a practical development from a theoretical basis.

Results
Results should be clear and concise.
**Discussion**
This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.

**Conclusions**
The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.

**Appendices**
If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

---

**Essential title page information**
- **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
- **Author names and affiliations.** Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. You can add your name between parentheses in your own script behind the English transliteration. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.
- **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. This responsibility includes answering any future queries about Methodology and Materials. Ensure that the e-mail address is given and that contact details are kept up to date by the corresponding author.
- **Present/permanent address.** If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

**Highlights**
Article highlights are optional at initial submission but compulsory for a revised article. Article highlights help increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the examples here: example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

**Abstract**
A concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s). Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

**Graphical Abstract**
A graphical abstract is optional for this journal. It should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership online. Authors must provide images that clearly represent the work described in the article. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: please provide an image with a minimum of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. You can view Example Graphical Abstracts on our information site.

**Keywords**
Immediately after the abstract, provide a maximum of 6 keywords, using American spelling and avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.
Abbreviations
Define abbreviations that are not standard in this field in a footnote to be placed on the first page of the article. Such abbreviations that are unavoidable in the abstract must be defined at their first mention there, as well as in the footnote. Ensure consistency of abbreviations throughout the article.

Acknowledgements
Collate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

Formatting of funding sources
List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, it is recommended to include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Math formulae
Please submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., X/Y. In principle, variables are to be presented in italics. Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).

Footnotes
Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors can build footnotes into the text, and this feature may be used. Otherwise, please indicate the position of footnotes in the text and list the footnotes themselves separately at the end of the article. Do not include footnotes in the Reference list.

Artwork

Image manipulation
Whilst it is accepted that authors sometimes need to manipulate images for clarity, manipulation for purposes of deception or fraud will be seen as scientific ethical abuse and will be dealt with accordingly. For graphical images, this journal is applying the following policy: no specific feature within an image may be enhanced, obscured, moved, removed, or introduced. Adjustments of brightness, contrast, or color balance are acceptable if and as long as they do not obscure or eliminate any information present in the original. Nonlinear adjustments (e.g. changes to gamma settings) must be disclosed in the figure legend.

Electronic Artwork
General points
• Make sure you use uniform lettering and sizing of your original artwork.
• Embed the used fonts if the application provides that option.
• Aim to use the following fonts in your illustrations: Arial, Courier, Times New Roman, Symbol, or use fonts that look similar.
• Number the illustrations according to their sequence in the text.
• Use a logical naming convention for your artwork files.
• Provide captions to illustrations separately.
• Size the illustrations close to the desired dimensions of the published version.
• Submit each illustration as a separate file.
• Ensure that color images are accessible to all, including those with impaired color vision.
A detailed guide on electronic artwork is available.

**You are urged to visit this site; some excerpts from the detailed information are given here.**

**Formats**

If your electronic artwork is created in a Microsoft Office application (Word, PowerPoint, Excel) then please supply 'as is' in the native document format. Regardless of the application used other than Microsoft Office, when your electronic artwork is finalized, please 'Save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, half-tones, and line/halftone combinations given below):

**EPS (or PDF):** Vector drawings, embed all used fonts. Note: This will include a majority of `regular? figures such as bar, scatter, and line plots, and many more complicated plots, too. Please avoid the .png format which is the default output for some software, but which converts poorly in the .pdf build during the evaluation of your manuscript.

**TIFF (or JPEG):** Color or grayscale photographs (half-tones), keep to a minimum of 300 dpi.

**TIFF (or JPEG):** Bitmapped (pure black & white pixels) line drawings, keep to a minimum of 1000 dpi.

**TIFF (or JPEG):** Combinations bitmapped line/half-tone (color or grayscale), keep to a minimum of 500 dpi.

**Please do not:**

- Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); these typically have a low number of pixels and limited set of colors;
- Supply files that are too low in resolution;
- Submit graphics that are disproportionately large for the content.

**Color artwork**

Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF) or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these figures will appear in color online (e.g., ScienceDirect and other sites). Further information on the preparation of electronic artwork.

**Figure captions**

Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

**Tables**

Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

**References**

**Citation in text**

Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.

**Reference links**

Increased discoverability of research and high quality peer review are ensured by online links to the sources cited. In order to allow us to create links to abstracting and indexing services, such as Scopus, CrossRef and PubMed, please ensure that data provided in the references are correct. Please note that incorrect surnames, journal/book titles, publication year and pagination may prevent link creation. When copying references, please be careful as they may already contain errors. Use of the DOI is highly encouraged.
A DOI is guaranteed never to change, so you can use it as a permanent link to any electronic article. An example of a citation using DOI for an article not yet in an issue is: VanDecar J.C., Russo R.M., James D.E., Ambeh W.B., Franke M. (2003). Aseismic continuation of the Lesser Antilles slab beneath northeastern Venezuela. Journal of Geophysical Research, https://doi.org/10.1029/2001JB000884. Please note the format of such citations should be in the same style as all other references in the paper.

**Web references**

As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

**Data references**

This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

**Preprint references**

Where a preprint has subsequently become available as a peer-reviewed publication, the formal publication should be used as the reference. If there are preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published, these may be referenced. Preprints should be clearly marked as such, for example by including the word preprint, or the name of the preprint server, as part of the reference. The preprint DOI should also be provided.

**References in a special issue**

Please ensure that the words 'this issue' are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

**Reference Style**

Correct references are the responsibility of the author. Please ensure that all references cited in the text are included in the reference list.

**References in the text** start with the name of the author(s), followed by the publication date in brackets, e.g. 'Combes (2001) has shown the importance of ...', or '... has been described (Combes, 2001; Kumar et al., 2004) ...', using date order. More than one paper from the same author in the same year must be identified by the letters a, b, c, etc., placed after the year of publication. In the text, when referring to a work by two authors, use (Sangster and Dobson, 2002) or for more than two authors, the name of the first author should be given followed by et al.

**The references in the reference list** should be in alphabetical order. References to journal articles should contain names and initials of all authors, year of publication, article title, abbreviation of the name of the journal, volume number, and page numbers. Use of the DOI is highly encouraged.

Journal names should be abbreviated according to the List of Title Word Abbreviations.

When using reference management software, please follow the format of the sample references and citations as shown in this Guide, and please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software

**Unpublished data** (except for preprints), personal communications, and papers "in preparation" or "submitted", abstracts (whether published or not), and theses should not be listed in the references (but may be incorporated at the appropriate place in the text); work "in press" may be listed only if it has been accepted for publication. Personal communications must be accompanied by a letter or e-mail from the named person(s) giving permission to quote such information. References to books should also include the title (of series and volume), initials and names of the editor(s), and publisher and place of publication.
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

For references in a Special Issue, please ensure that the words 'this issue' are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

Examples:

Journal abbreviations source
Journal names should be abbreviated according to the List of Title Word Abbreviations.

Video
Elsevier accepts video material and animation sequences to support and enhance your scientific research. Authors who have video or animation files that they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table by referring to the video or animation content and noting in the body text where it should be placed. All submitted files should be properly labeled so that they directly relate to the video file's content. In order to ensure that your video or animation material is directly usable, please provide the file in one of our recommended file formats with a preferred maximum size of 150 MB per file, 1 GB in total. Video and animation files supplied will be published online in the electronic version of your article in Elsevier Web products, including ScienceDirect. Please supply 'stills' with your files: you can choose any frame from the video or animation or make a separate image. These will be used instead of standard icons and will personalize the link to your video data. For more detailed instructions please visit our video instruction pages. Note: since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and the print version for the portions of the article that refer to this content.

Data visualization
Include interactive data visualizations in your publication and let your readers interact and engage more closely with your research. Follow the instructions here to find out about available data visualization options and how to include them with your article.

Supplementary material
Supplementary material such as applications, images and sound clips, can be published with your article to enhance it. Submitted supplementary items are published exactly as they are received (Excel or PowerPoint files will appear as such online). Please submit your material together with the article and supply a concise, descriptive caption for each supplementary file. If you wish to make changes to supplementary material during any stage of the process, please make sure to provide an updated file. Do not annotate any corrections on a previous version. Please switch off the 'Track Changes' option in Microsoft Office files as these will appear in the published version.

Research data
This journal encourages and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings. To facilitate reproducibility and data reuse, this journal also encourages you to share your software, code, models, algorithms, protocols, methods and other useful materials related to the project.
Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. When sharing data in one of these ways, you are expected to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

**Data Linking**

If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. For more information, visit the database linking page.

For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.

In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

**Mendeley Data**

This journal supports Mendeley Data, enabling you to deposit any research data (including raw and processed data, video, code, software, algorithms, protocols, and methods) associated with your manuscript in a free-to-use, open access repository. The datasets will be listed and directly accessible to readers next to your published article online. For more information, visit the Mendeley Data for journals page.

**Research Elements**

This journal enables you to publish research objects related to your original research – such as data, methods, protocols, software and hardware – as an additional paper in a Research Elements journal. Research Elements is a suite of peer-reviewed, open access journals which make your research objects findable, accessible and reusable. Articles place research objects into context by providing detailed descriptions of objects and their application, and linking to the associated original research articles. Research Elements articles can be prepared by you, or by one of your collaborators.

During submission, you will be alerted to the opportunity to prepare and submit a manuscript to one of the Research Elements journals.

More information can be found on the Research Elements page.

**Data in Brief**

You have the option of converting any or all parts of your supplementary or additional raw data into one or multiple data articles, a new kind of article that houses and describes your data. Data articles ensure that your data is actively reviewed, curated, formatted, indexed, given a DOI and publicly available to all upon publication. You are encouraged to submit your article for Data in Brief as an additional item directly alongside the revised version of your manuscript. If your research article is accepted, your data article will automatically be transferred over to Data in Brief where it will be editorially reviewed and published in the open access data journal, Data in Brief. Please note an open access fee of 600 USD is payable for publication in Data in Brief. Full details can be found on the Data in Brief website. Please use this template to write your Data in Brief. Please refer to your Data in Brief article in your data availability statement.

**MethodsX**

The methods used in research articles and brief communications may be suitable for conversion to one or multiple MethodsX articles, a new kind of article that describes the details of customized research methods. Many researchers spend a significant amount of time on developing methods to fit their specific needs or setting, but often without getting credit for this part of their work. MethodsX, an open access journal, now publishes this information in order to make it searchable, peer reviewed, citable and reproducible. Authors are encouraged to submit their MethodsX article as an additional item directly alongside the revised version of their manuscript. If your research article is accepted,
your methods article will automatically be transferred over to MethodsX where it will be editorially reviewed. Please note an open access fee is payable for publication in MethodsX. Full details can be found on the MethodsX website. Please use the methods template or protocol template to prepare your MethodsX article.

AFTER ACCEPTANCE

Proofs
One set of page proofs (as PDF files) will be sent by e-mail to the corresponding author (if we do not have an e-mail address then paper proofs will be sent by post) or a link will be provided in the e-mail so that authors can download the files themselves. To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Elsevier now provides authors with PDF proofs which can be annotated; for this you will need to download the free Adobe Reader, version 9 (or higher). Instructions on how to annotate PDF files will accompany the proofs (also given online). The exact system requirements are given at the Adobe site.
If you do not wish to use the PDF annotations function, you may list the corrections (including replies to the Query Form) and return them to Elsevier in an e-mail. Please list your corrections quoting line number. If, for any reason, this is not possible, then mark the corrections and any other comments (including replies to the Query Form) on a printout of your proof and scan the pages and return via e-mail. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. We will do everything possible to get your article published quickly and accurately. It is important to ensure that all corrections are sent back to us in one communication: please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

Offprints
The corresponding author will, at no cost, receive a customized Share Link providing 50 days free access to the final published version of the article on ScienceDirect. The Share Link can be used for sharing the article via any communication channel, including email and social media. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Corresponding authors who have published their article gold open access do not receive a Share Link as their final published version of the article is available open access on ScienceDirect and can be shared through the article DOI link.

AUTHOR INQUIRIES
Visit the Elsevier Support Center to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch.
You can also check the status of your submitted article or find out when your accepted article will be published.
