Environmental Science & Ecotechnology (ESE) is an international peer-reviewed and open-access journal, publishing original research on environmental science and engineering, ecotechnology, and relevant fields.

ESE aims to establish an influential communication platform for scientists and engineers, policymakers, stakeholders, and professionals from academia and industry. ESE acknowledges the interdisciplinary nature of scientific research in environmental science and technology. It is specifically interested in frontier researches and transdisciplinary topics, including global change ecology, environmental science, environmental technology, and ecological technology.

ESE is an open-access journal. Authors who publish in ESE will be able to make their work immediately, permanently, and freely accessible. ESE authors will have a choice of license options and retain copyright to their published work. This journal charges an Article Publication Charge (APC), however, this charge will be waived until at least 31 December 2020.

ESE is published by Elsevier, co-organized by the Chinese Society for Environmental Sciences, Harbin Institute of Technology, and the Chinese Research Academy of Environmental Sciences, supervised by China Association for Science and Technology.

ESE adheres to strict ethical publication guidelines and actively supports a culture of inclusive and representative publication. For full information on publishing your paper open access in ESE, please contact the editorial office of ESE (ese@chinacses.org).

ABSTRACTING AND INDEXING

Directory of Open Access Journals (DOAJ)

EDITORIAL BOARD

Editor-in-Chief
Nan-Qi Ren, Harbin Institute of Technology, Harbin, China
Environmental Biotechnology, Bioenergy technology of hydrogen, Methane and electricity, Microbial ecology, Biological processes of wastewater treatment
**Associate Editors**

Jinnan Wang, Chinese Academy for Environmental Planning, Beijing, China  
Environmental planning, Environmental policy, National green GDP accounting, Gross ecosystem product, Gross economic ecological production  

Fengchang Wu, Chinese Research Academy of Environmental Sciences, Beijing, China  
Environmental criteria, standard, Environmental biogeochemistry, Aquatic toxicology, Risk assessment

**Executive Editors-in-Chief**

Bin Peng, Chinese Society for Environmental Sciences, Beijing, China  
Environment and sustainable development policies  

Korneel Rabaey, Ghent University, Gent, Belgium  
Anaerobic digestion, Electrochemistry, Bioelectrochemistry, Wastewater treatment technology, Microbial protein  

Danny Reible, Texas Tech University, Lubbock, Texas, United States of America  
Sources, Transport and fate of multimedia environmental contaminants, Assessment and remediation of contaminated sites, Water quality and availability  

Yonghui Song, Chinese Research Academy of Environmental Sciences, Beijing, China  
Wastewater treatment technology, Nutrients removal and recovery from waste streams, Water environmental risk management  

Jianzhong Sun, Jiangsu University, Zhenjiang, China  
Biomass recycling and recovery, Agricultural residue processing, Biofuels, Biorefinery technology and products, 3D printing from biomass, Plastic wastes and their biodegradation  

Aijie Wang, Harbin Institute of Technology, Harbin, China  
Water and Wastewater Treatment, Environmental Biotechnology

**Executive Associate Editors**

Shih-Hsin Ho, Harbin Institute of Technology, School of Environment, Harbin, China  
Microalgae, Environmental Science and Engineering, Wastewater/Wastes treatment, Biomaterials, Bioengineering  

Junsheng Li, Chinese Research Academy of Environmental Sciences, Beijing, China  
Biodiversity conservation, Management of Protected areas, Effect of climate change  

Xi Lu, Tsinghua University, School of Environment, Beijing, China  
Environmental Science, Energy, Climate and Environmental Complex System Modeling, Integrative assessment framework on renewable energy, Low-carbon development and its co-benefit to air pollution control, Big data analysis of energy storage and variable renewable sources, Emissions inventory on greenhouse gases and air pollutants, Energy system for green, low-carbon and smart cities.  

Ariel Novoplansky, Ben-Gurion University of the Negev, Be’er Sheva, Israel  
Evolutionary ecology of plants, Phenotypic plasticity, Development, Morphogenesis, Learning, Competition, Eco-devo, Signal perception, Ecological interactions, Competition, Communication, Behavior, Evolution, Environmental information, Community ecology, Biodiversity, Conservation  

Baoqing Shan, Research Centre for Eco-Environmental Sciences, Chinese Academy of Sciences, Beijing, China  
Watershed pollution control, Aquatic ecology, Watershed ecology, River and lake restoration, Aquatic environmental engineering, Ecological engineering  

Mengzhen Xu, Tsinghua University, Beijing, China  
Biogeomorphology, Ecohydraulics, Ecosedimentation, Aquatic ecology, Invasive species, Biofouling, River restoration, Integrated river management

**Managing Editor**

Yu Tao, Harbin Institute of Technology Shenzhen, Shenzhen, China  
Dark data mining from WWTPs, Biological wastewater treatment, Anaerobic digestion, Anammox, Microbial ecology

**Editorial Board Members**

Largus Angenent, Eberhard Karls University Tubingen Center for Bioinformatics Tübingen, Tuebingen, Germany  
Open-culture biotechnology, Power-to-gas, Anaerobic fermentation, Extracellular electron transfer, Bioelectrochemical systems, Chain elongation, Syngas fermentation, Caproic acid, Caprylic acid, Carboxylate platform  

Yanhui Ao, Hohai University, Nanjing, China  
Water resources protection, Water remediation technology, Advanced oxidation process, Photocatalysis, Emerging contaminants  

Federico Aulenta, Water Research Institute (IRSA), National Research Council (CNR), Monterotondo (RM), Italy
Aerobic/anaerobic biodegradation processes, Bioelectrochemical systems

Yinguang Chen, State Key Laboratory of Pollution Control and Resource Reuse, Tongji University, Shanghai, China

Environmental microbial biotechnology, Reuse, Recovery, Wastewater, Organic wastes

Shaoan Cheng, Zhejiang University, Hangzhou, China

Microbial fuel cell (MFC) and Microbial electrolysis cell (MEC), Environmental microbial electrochemistry, Wastewater treatment and energy recovery, Biofuel production through the reduction of carbon dioxide, Electrode materials and Green power source

Robert Costanza, Australian National University Crawford School of Public Policy, Canberra, Australia

Transdisciplinary integration, Ecological economics, Ecosystem services, Landscape ecology, Integrated ecological and socioeconomic modeling, Energy and material flow analysis, Environmental policy, Social traps, Incentive structures and institutions

Shiyou Ding, Michigan State University, East Lansing, Michigan, United States of America

Nanoscale assembly of the plant cell walls, Plant cell wall architecture changes under chemical and enzymatic treatments, In situ chemical mapping using label-free microspectroscopy, Cellulase biochemistry, Imaging enzymatic activity at the single molecular level, Biomass to biofuels, Biomaterials, Atomic force microscopy (AFM), Stimulated Raman Scattering (SRS) Microscopy, Single Cell RNA-seq and Bioinformatics

Falk Harnisch, Helmholtz-Centre for Environmental Research - UFZ, Leipzig, Germany

Microbial bioelectrocatalysis, Bioelectrotechnology

Tomohisa Hasunuma, Kobe University, Kobe, Japan

Metabolic engineering, Engineering biology of several prokaryotes, Yeast and microalgae based on metabolism analysis, Metabolism analysis, Bioprocess development for the production of bio-based chemicals

Jianzhong He, National University of Singapore, Singapore, Singapore

Biotransformation and fate of hazardous wastes, Bioremediation of soil, sediments, and groundwater, Environmental genetics and novel metabolism of microbes, Environmental application of genomics

Zhen (Jason) He, Washington University in St. Louis, Department of Energy, Environmental and Chemical Engineering, St. Louis, Missouri, United States of America

Water pollution and treatment, Environmental biotechnology, Resource recovery from wastes, Bioelectrochemical systems, Bioenergy, Membrane technology, Bioremediation, Desalination

Hong Liu, Oregon State University, Corvallis, Oregon, United States of America

Microbial electrochemical technology, Biohydrogen production, Anaerobic processes, Biological wastewater treatment

Yongbo Liu, Chinese Research Academy of Environmental Sciences, Beijing, China

Biodiversity protection, Biosafety assessment, Phylogenetic analysis, Genetic diversity, Geographic distribution

Margaret M. MacDonell, Argonne National Laboratory, Lemont, Illinois, United States of America

Integrated health risk analysis

Huu Hao Ngo, University of Technology Sydney, Sydney, Australia

Biological wastewater/waste treatment processes, Membrane technology, Resource recovery, Bioenergy, Circular bioeconomy, Minimization of wastes and emissions, Environmental impact assessment, Alternative water resources

Zhiyong Jason Ren, Princeton University, Princeton, New Jersey, United States of America

Water resource recovery, Wastewater treatment, Microbial electrochemistry, Functional membranes

Don Scavia, University of Michigan, Ann Arbor, Michigan, United States of America

Effects of natural and anthropogenic stresses on Great Lakes and marine ecosystems, The use of models and integrated assessments in transferring knowledge to the decision-making process

Pau-Loke Show, University of Nottingham - Malaysia Campus, Department of Chemical and Environmental Engineering, Semenyih, Malaysia

Biochemical Engineering, Environmental Engineering, Microalgae Technology, Bioenergy, Biorefinery

Shaobin Wang, The University of Adelaide, School of Chemical Engineering and Advanced Materials, Adelaide, South Australia, Australia

Nanoparticles and nanotechnology, Advanced oxidation processes, Air pollution and control, Wastewater treatment technology, Solid waste conversion and treatment

Beidou Xi, Chinese Research Academy of Environmental Sciences, Beijing, China

Solid waste treatment and recycling, Groundwater pollution prevention and control

Wenqiao Yuan, North Carolina State University, Raleigh, North Carolina, United States of America

Biofuels, Bioproducts, Microalgae, Biochar, Bio-fuel cells, Microbial fuel cells, Fermentation, Biomass thermochemical conversion, Green agriculture

Xinmin Zhan, National University of Ireland Galway, Galway, Ireland

Biological nitrogen removal, Livestock waste management, Nutrient recovery, Anaerobic digestion

Fengchun Zhang, Chinese Research Academy of Environmental Sciences, Beijing, China
Biodiversity conservation, Resource sustainable use, ABS (access to genetic resources and benefit-sharing), ecology, Natural restoration, Land degradation

**Junfeng Jim Zhang**, Duke University, Durham, North Carolina, United States of America
Developing novel biomarkers of human exposure and health effects, Assessing health and climate co-benefits of air pollution interventions, Examining biological mechanisms by which environmental exposures exert adverse health effects

**Xiaowei Zhang**, Nanjing University, Nanjing, China
Ecotoxicology, Toxicogenomics, Ecogenomics, Endocrine disrupting chemicals, Effect based analysis, Adverse Outcome Pathways Biomonitoring, Biodiversity, Ecosystem Functions.

**Huazhang Zhao**, Peking University, Beijing, China
Wastewater treatment, Environmental functional materials, Physicochemical technology, Membrane, Bioelectrochemistry

**Yongjin Zhou**, Dalian Institute of Chemical Physics, Chinese Academy of Sciences, Dalian, China
Energy biotechnology, Synthetic biology, Environmental biotechnology

**Advisory Board Members**

**Thomas Christensen**, Technical University of Denmark, Kgs Lyngby, Denmark
Waste treatment, Waste management, Life cycle assessment (LCA)

**John C. Crittenden**, Georgia Institute of Technology, Atlanta, Georgia, United States of America
Resilient infrastructure systems, Sustainable communities

**Glen Daigger**, University of Michigan, Ann Arbor, Michigan, United States of America
Water nutrient removal and recovery, Treatment process optimization and control (particularly biological treatment systems), Control of activated sludge bulking and foaming

**Hong He**, Research Centre for Eco-Environmental Sciences, Chinese Academy of Sciences, Beijing, China
Environmental catalysis and related surface/interface sciences, Catalytic cleaning of NOx, low temperature oxidation of Co and VOCs, molecular structures and reaction intermediates on surfaces, computer-modelling based on density function theory

**Michael R. Hoffmann**, California Institute of Technology, Pasadena, California, United States of America
Ultrasonic irradiation, Semiconductor photocatalysis, Semiconductor electrochemistry, Ozone, Solar fuels production

**Li’An Hou**, Tongji University, Shanghai, China
Drinking water safety, Decentralized point-source domestic sewage treatment , Residential air purification, BET surface area measurement, Surface Adsorption, Water and Wastewater treatment

**Wenqing Liu**, Hefei University of Technology, Hefei, China
Environment monitoring technology, Environment optical monitoring, Multiple three-dimensional monitoring technologies for atmospheric pollution

**Mark van Loosdrecht**, Delft University of Technology, Department of Biotechnology, Delft, Netherlands
Microbial ecology, Wastewater treatment and waste-to-product processes, Biofilm processes, Conversion of nitrogen compounds and Phosphate, Microbial polymer production

**Yongzhen Peng**, Beijing University of Technology, Beijing, China
Theory and application of sewage biological treatment, Automatic control and intelligent control of activated sludge sewage treatment system, Management information system of water environment and sewage treatment engineering

**Bruce Rittmann**, Arizona State University, Tempe, Arizona, United States of America
Microbial communities, Membrane biofilm reactor (MBfR), Water and wastewater treatment, Renewable bioenergy, Microbes and human health

**Shu Tao**, Peking University College of Urban and Environmental Sciences, Beijing, China
Hi-resolution emission inventories of air pollutants, Atmospheric chemical transport and polulation exposure modeling, Household air pollution and health impact, Policy impact assessment

**Zhifeng Yang**, Beijing Normal University, Beijing, China
Water Environmental Management, Urban Ecological Planning and Management, Wetland Ecological Process

**Lizhong Zhu**, Zhejiang University, College of Environmental Science & Resource Science, Hangzhou, China
Bioavailability of typical organic pollutants in soil and the regulation principle, Characteristics, interfacial behavior and principles of soil composite organic pollution, Soil carbon sequestration of biochar
GUIDE FOR AUTHORS

Your Paper Your Way
We now differentiate between the requirements for new and revised submissions. You may choose to submit your manuscript as a single Word or PDF file to be used in the refereeing process. Only when your paper is at the revision stage, will you be requested to put your paper in to a 'correct format' for acceptance and provide the items required for the publication of your article.

To find out more, please visit the Preparation section below.

Types of article

1. Editorial articles are published by the Editor-in-Chief or other Editors, members of the Editorial Board or invited Guest Editors. These focus attention on news, policies, opinions, contemporary important issues, and are designed to stimulate debate and discussion.

2. Research Reviews represent articles that distill recent developments and discuss trends in a particular field of research. They may be of a broader nature than Original Research Articles, providing accounts of specific fields of interest in relevant research areas related to our Aims and Scope. Authors are encouraged to write in a clear and simple manner so that the article is understandable to readers from a broad cross-section of disciplines. On average, a text length (excluding references) of approximately 8000 words is advised, and brevity is encouraged.

3. Original Research Articles are up-to-date, original papers that present developments in the field of environmental science and ecotechnology. Informative abstracts are required, and articles must be fully referenced. Criteria for publication are weighted toward scientific quality and environmental significance. The manuscript will be evaluated on the basis of its conciseness, clarity, and presentation. The work will be assessed according to its originality, scientific merit, and experimental design. Poorly written manuscripts will be returned to the authors with a request to improve the quality of the paper prior to peer review. A text length (excluding references) of approximately 4000-8000 words is advised, and brevity is encouraged.

4. Short communications will be accepted for the early communication of important and original advances. Such accounts may be of a preliminary nature but should always be complete and should not exceed the equivalent of 3000 words, including figures and tables.

5. Perspectives are short papers addressing a key, often emerging, research area. They should balance the personal view of the author and a reasoned discussion of recent results of great importance. While they often examine the evolution of the field, they are not meant as a mini review, but as a scholarly discussion that helps to identify new trends and developments in a given field. Perspective manuscripts should contain no more than 3000 words, up to three figures, and 60 references.

6. Commentary articles discuss issues of particular significance to the field of environmental science and ecotechnology. Commentary articles may include highlights of significant papers, in the current issue of Environmental Science & Ecotechnology or elsewhere, or comprise poignant opinions, responses to previously published items, or other timely information or comment. Commentary articles may be either solicited by the Editors or offered as an unsolicited submission. No abstract is required for commentary articles. The main body of the text should not exceed 1500 words with a maximum of 3 tables or figures plus maximum of 10 references.

7. Short Correspondence is a forum for readers' reactions on brief insight into any subject concerning environment and ecology. A short correspondence is not peer-reviewed and so should not contain primary research data. A short correspondence should contain no longer than 300 words with no more than five references and without any figures or tables. The maximum number of the authors of a short correspondence is four. It is submitted via e-mail to ese@chinaces.org only. Authors' names, postal and e-mail address, and current telephone contact information should be supplied in submissions.
Contact details for submission
All manuscripts should be submitted electronically through Editorial Manager https://www.editorialmanager.com/ese/default.aspx. If you are not able to submit your paper electronically, please contact the ESE Editorial Office (ese@chinacses.org) for further instructions.

Submission checklist
You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

Ensure that the following items are present:

One author has been designated as the corresponding author with contact details:
- E-mail address
- Full postal address

All necessary files have been uploaded:
Manuscript:
- Include keywords
- All figures (include relevant captions)
- All tables (including titles, description, footnotes)
- Ensure all figure and table citations in the text match the files provided
- Indicate clearly if color should be used for any figures in print
Graphical Abstracts / Highlights files (where applicable)
Supplemental files (where applicable)

Further considerations
- Manuscript has been 'spell checked' and 'grammar checked'
- All references mentioned in the Reference List are cited in the text, and vice versa
- Permission has been obtained for use of copyrighted material from other sources (including the Internet)
- A competing interests statement is provided, even if the authors have no competing interests to declare
- Journal policies detailed in this guide have been reviewed
- Referee suggestions and contact details provided, based on journal requirements

For further information, visit our Support Center.

BEFORE YOU BEGIN

Ethics in publishing
Please see our information on Ethics in publishing.

Declaration of competing interest
All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. Authors should complete the declaration of competing interest statement using this template and upload to the submission system at the Attach/Upload Files step. Note: Please do not convert the .docx template to another file type. Author signatures are not required. If there are no interests to declare, please choose the first option in the template. More information.

Submission declaration and verification
Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify originality, your article may be checked by the originality detection service Crossref Similarity Check.
Preprints
Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see 'Multiple, redundant or concurrent publication' for more information).

Use of inclusive language
Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns ("clinicians, patients/clients") as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

Changes to authorship
Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. A confirmation letter will be sent to ALL AUTHORS to inform that the action of submission has been made. Any controversial response by any coauthor may lead to reconsideration of the manuscript by the editorial office. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed. Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the editor considers the request, the publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

Copyright
Upon acceptance of an article, authors will be asked to complete a 'License Agreement' (see more information on this). Permitted third party reuse of open access articles is determined by the author’s choice of user license.

Author rights
As an author you (or your employer or institution) have certain rights to reuse your work. More information.

Role of the funding source
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement then this should be stated.

Open access
Please visit our Open Access page for more information.

Elsevier Researcher Academy
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.
Language (usage and editing services)
Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the English Language Editing service available from Elsevier's Author Services.

Submission
Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

Referees
Please submit the names and institutional e-mail addresses of several potential referees. For more details, visit our Support site. Note that the editor retains the sole right to decide whether or not the suggested reviewers are used. Note that the editor retains the sole right to decide whether or not the suggested reviewers are used. Suggested reviewers must be supplied with complete contact details and e-mail addresses. Reviewers should be knowledgeable of the research area and must not have a conflict of interest. Do not list collaborators, colleagues, researchers at your institution, former advisors, or advisees.

Additional information
Authors are required to submit a cover letter with each new submission to the journal. This cover letter should acknowledge that the author has consulted the Guide for Authors in preparing his or her submitted manuscript. The author must also confirm that he or she has prepared the manuscript in compliance with the Ethics in Publishing Policy as described in the Guide for Authors.

In preparing the cover letter, the author must also address the following points: (1) Author indication if the manuscript is a re-submission. (2) Suggested reviewers with complete contact details and e-mail addresses. Do not list collaborators, colleagues, researchers at your institution, former advisors, or advisees. (3) Keywords are provided. (4) References are in correct format. (5) PDF of the manuscript is in correct order upon submission. (6) Manuscript length is in compliance with the Guide for Authors.

PREPARATION
NEW SUBMISSIONS
Submission to this journal proceeds totally online and you will be guided stepwise through the creation and uploading of your files. The system automatically converts your files to a single PDF file, which is used in the peer-review process. As part of the Your Paper Your Way service, you may choose to submit your manuscript as a single file to be used in the refereeing process. This can be a PDF file or a Word document, in any format or layout that can be used by referees to evaluate your manuscript. It should contain high enough quality figures for refereeing. If you prefer to do so, you may still provide all or some of the source files at the initial submission. Please note that individual figure files larger than 10 MB must be uploaded separately.

Rejected Submissions: If authors of rejected submissions wish to resubmit, they must contact the handling editor for permission. The contact should be accompanied by request for resubmission, an explanation of why this work is worth reconsideration, and detailed response to the previous reviewers. A resubmission without the handling editor's permission will be rejected without review.

References
There are no strict requirements on reference formatting at submission. References can be in any style or format as long as the style is consistent. Where applicable, author(s) name(s), journal title/book title, chapter title/article title, year of publication, volume number/book chapter and the article number or pagination must be present. Use of DOI is highly encouraged. The reference style used by the journal will be applied to the accepted article by Elsevier at the proof stage. Note that missing data will be highlighted at proof stage for the author to correct.

Formatting Requirements
There are no strict formatting requirements but all manuscripts must contain the essential elements needed to convey your manuscript, for example Abstract, Keywords, Introduction, Materials and Methods, Results, Conclusions, Artwork and Tables with Captions.
If your article includes any Videos and/or other Supplementary material, this should be included in your initial submission for peer review purposes. Divide the article into clearly defined sections.

**Please ensure your paper has consecutive line numbering - this is an essential peer review requirement.**

*Figures and tables embedded in text*

Please ensure the figures and the tables included in the single file are placed next to the relevant text in the manuscript, rather than at the bottom or the top of the file. The corresponding caption should be placed directly below the figure or table.

**Peer review**

This journal operates a single anonymized review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal's usual procedures, with peer review handled independently of the relevant editor and their research groups. More information on types of peer review.

**REVISED SUBMISSIONS**

*Use of word processing software*

Regardless of the file format of the original submission, at revision, you must provide us with an editable file of the entire article. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). See also the section on Electronic artwork. To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

**Article structure**

*Subdivision - numbered sections*

Divide your article into clearly defined and numbered sections. Subsections should be numbered 1.1 (then 1.1.1, 1.1.2, ...), 1.2, etc. (the abstract is not included in section numbering). Use this numbering also for internal cross-referencing: do not just refer to 'the text'. Any subsection may be given a brief heading. Each heading should appear on its own separate line.

*Introduction*

State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results.

*Material and methods*

Provide sufficient details to allow the work to be reproduced by an independent researcher. Methods that are already published should be summarized, and indicated by a reference. If quoting directly from a previously published method, use quotation marks and also cite the source. Any modifications to existing methods should also be described.

*Results*

Results should be clear and concise.

*Discussion*

This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.

*Conclusions*

The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.
Appendices
If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

Essential title page information
• **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
• **Author names and affiliations.** Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. You can add your name between parentheses in your own script behind the English transliteration. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lowercase superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.
• **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. This responsibility includes answering any future queries about Methodology and Materials. Ensure that the e-mail address is given and that contact details are kept up to date by the corresponding author(s). Considering the nature of cross-disciplinary and cross-region studies, Environmental Science & Ecotechnology accepts research led by more than one corresponding authors.
• **Present/permanent address.** If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

**Highlights**
Highlights are mandatory for this journal as they help increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the examples here: example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

**Abstract**
A concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s). Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

**Graphical abstract**
Although a graphical abstract is optional, its use is encouraged as it draws more attention to the online article. The graphical abstract should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: Please provide an image with a minimum of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. You can view Example Graphical Abstracts on our information site. Authors can make use of Elsevier’s Illustration Services to ensure the best presentation of their images and in accordance with all technical requirements.

**Keywords**
Immediately after the abstract, provide a maximum of 6 keywords, using American spelling and avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.
Abbreviations
Define abbreviations that are not standard in this field in a footnote to be placed on the first page of the article. Such abbreviations that are unavoidable in the abstract must be defined at their first mention there, as well as in the footnote. Ensure consistency of abbreviations throughout the article.

Acknowledgements
Collate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

Author Contributions
The contributions of each author are required to state in a stand-alone section if there are at least two authors.

Formatting of funding sources
List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, please include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Math formulae
Please submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., X/Y. In principle, variables are to be presented in italics. Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).

Footnotes
Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors build footnotes into the text, and this feature may be used. Should this not be the case, indicate the position of footnotes in the text and present the footnotes themselves separately at the end of the article.

Artwork
Electronic Artwork
General points
- Make sure you use uniform lettering and sizing of your original artwork.
- Embed the used fonts if the application provides that option.
- Aim to use the following fonts in your illustrations: Arial, Courier, Times New Roman, Symbol, or use fonts that look similar.
- Number the illustrations according to their sequence in the text.
- Use a logical naming convention for your artwork files.
- Provide captions to illustrations separately.
- Size the illustrations close to the desired dimensions of the published version.
- Submit each illustration as a separate file.
- Ensure that color images are accessible to all, including those with impaired color vision.
- High-quality figures/images are required to appear on published articles of Environmental Science & Ecotechnology. The authors will receive specific requirements on artwork production when their manuscripts are accepted conditionally. The editorial office of Environmental Science & Ecotechnology (ese@chinacses.org) will be involved in the artwork production stage actively together with the authors.
A detailed guide on electronic artwork is available.

You are urged to visit this site; some excerpts from the detailed information are given here.

Formats
If your electronic artwork is created in a Microsoft Office application (Word, PowerPoint, Excel) then please supply 'as is' in the native document format.
Regardless of the application used other than Microsoft Office, when your electronic artwork is finalized, please 'Save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):
EPS (or PDF): Vector drawings, embed all used fonts.
TIFF (or JPEG): Color or grayscale photographs (halftones), keep to a minimum of 300 dpi.
TIFF (or JPEG): Bitmapped (pure black & white pixels) line drawings, keep to a minimum of 1000 dpi.
TIFF (or JPEG): Combinations bitmapped line/halftone (color or grayscale), keep to a minimum of 500 dpi.

Please do not:
• Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); these typically have a low number of pixels and limited set of colors;
• Supply files that are too low in resolution;
• Submit graphics that are disproportionately large for the content.

Color artwork
Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF), or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these figures will appear in color online (e.g., ScienceDirect and other sites) regardless of whether or not these illustrations are reproduced in color in the printed version. For color reproduction in print, you will receive information regarding the costs from Elsevier after receipt of your accepted article. Please indicate your preference for color: in print or online only. Further information on the preparation of electronic artwork.

Figure captions
Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

Tables
Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

References
Citation in text
Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.

Reference links
Increased discoverability of research and high quality peer review are ensured by online links to the sources cited. In order to allow us to create links to abstracting and indexing services, such as Scopus, CrossRef and PubMed, please ensure that data provided in the references are correct. Please note that incorrect surnames, journal/book titles, publication year and pagination may prevent link creation. When copying references, please be careful as they may already contain errors. Use of the DOI is highly encouraged.
A DOI is guaranteed never to change, so you can use it as a permanent link to any electronic article. An example of a citation using DOI for an article not yet in an issue is: VanDecar J.C., Russo R.M., James D.E., Ambeh W.B., Franke M. (2003). Aseismic continuation of the Lesser Antilles slab beneath northeastern Venezuela. Journal of Geophysical Research, https://doi.org/10.1029/2001JB000884. Please note the format of such citations should be in the same style as all other references in the paper.

Web references
As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

Data references
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

References in a special issue
Please ensure that the words 'this issue' are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

Reference management software
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal's style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.

Reference formatting
There are no strict requirements on reference formatting at submission. References can be in any style or format as long as the style is consistent. Where applicable, author(s) name(s), journal title/book title, volume number/book chapter, year of publication and the article number or pagination must be present. Use of DOI is highly encouraged. The reference style used by the journal will be applied to the accepted article by Elsevier at the proof stage. Note that missing data will be highlighted at proof stage for the author to correct. If you do wish to format the references yourself they should be arranged according to the following examples:

Reference style
Text: All citations in the text should refer to:
1. Single author: the author's name (without initials, unless there is ambiguity) and the year of publication;
2. Two authors: both authors' names and the year of publication;
3. Three or more authors: first author's name followed by 'et al.' and the year of publication.
Citations may be made directly (or parenthetically). Groups of references can be listed either first alphabetically, then chronologically, or vice versa.
Examples: 'as demonstrated (Allan, 2000a, 2000b, 1999; Allan and Jones, 1999).... Or, as demonstrated (Jones, 1999; Allan, 2000).... Kramer et al. (2010) have recently shown ...'
List: References should be arranged first alphabetically and then further sorted chronologically if necessary. More than one reference from the same author(s) in the same year must be identified by the letters 'a', 'b', 'c', etc., placed after the year of publication.
Examples:
Reference to a journal publication:
Reference to a journal publication with an article number:
Reference to a book:

Reference to a chapter in an edited book:

Reference to a website:

Reference to a dataset:

Reference to software:

Journal abbreviations source
Journal names should be abbreviated according to the List of Title Word Abbreviations.

Video
Elsevier accepts video material and animation sequences to support and enhance your scientific research. Authors who have video or animation files that they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table by referring to the video or animation content and noting in the body text where it should be placed. All submitted files should be properly labeled so that they directly relate to the video file's content. In order to ensure that your video or animation material is directly usable, please provide the file in one of our recommended file formats with a preferred maximum size of 150 MB per file, 1 GB in total. Video and animation files supplied will be published online in the electronic version of your article in Elsevier Web products, including ScienceDirect. Please supply 'stills' with your files: you can choose any frame from the video or animation or make a separate image. These will be used instead of standard icons and will personalize the link to your video data. For more detailed instructions please visit our video instruction pages. Note: since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and the print version for the portions of the article that refer to this content.

Data visualization
Include interactive data visualizations in your publication and let your readers interact and engage more closely with your research. Follow the instructions here to find out about available data visualization options and how to include them with your article.

Supplementary material
Supplementary material such as applications, images and sound clips, can be published with your article to enhance it. Submitted supplementary items are published exactly as they are received (Excel or PowerPoint files will appear as such online). Please submit your material together with the article and supply a concise, descriptive caption for each supplementary file. If you wish to make changes to supplementary material during any stage of the process, please make sure to provide an updated file. Do not annotate any corrections on a previous version. Please switch off the 'Track Changes' option in Microsoft Office files as these will appear in the published version.

Research data
This journal encourages and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings. To facilitate reproducibility and data reuse, this journal also encourages you to share your software, code, models, algorithms, protocols, methods and other useful materials related to the project.
Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. If you are sharing data in one of these ways, you are encouraged to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

**Data linking**

If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.

For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.

In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

**Mendeley Data**

This journal supports Mendeley Data, enabling you to deposit any research data (including raw and processed data, video, code, software, algorithms, protocols, and methods) associated with your manuscript in a free-to-use, open access repository. During the submission process, after uploading your manuscript, you will have the opportunity to upload your relevant datasets directly to Mendeley Data. The datasets will be listed and directly accessible to readers next to your published article online.

For more information, visit the Mendeley Data for journals page.

**Data in Brief**

You have the option of converting any or all parts of your supplementary or additional raw data into a data article published in Data in Brief. A data article is a new kind of article that ensures that your data are actively reviewed, curated, formatted, indexed, given a DOI and made publicly available to all upon publication (watch this video describing the benefits of publishing your data in Data in Brief). You are encouraged to submit your data article for Data in Brief as an additional item directly alongside the revised version of your manuscript. If your research article is accepted, your data article will automatically be transferred over to Data in Brief where it will be editorially reviewed, published open access and linked to your research article on ScienceDirect. Please note an open access fee is payable for publication in Data in Brief. Full details can be found on the Data in Brief website. Please use this template to write your Data in Brief data article.

**MethodsX**

You have the option of converting relevant protocols and methods into one or multiple MethodsX articles, a new kind of article that describes the details of customized research methods. Many researchers spend a significant amount of time on developing methods to fit their specific needs or setting, but often without getting credit for this part of their work. MethodsX, an open access journal, now publishes this information in order to make it searchable, peer reviewed, citable and reproducible. Authors are encouraged to submit their MethodsX article as an additional item directly alongside the revised version of their manuscript. If your research article is accepted, your methods article will automatically be transferred over to MethodsX where it will be editorially reviewed. Please note an open access fee is payable for publication in MethodsX. Full details can be found on the MethodsX website. Please use this template to prepare your MethodsX article.

**Data statement**

To foster transparency, we encourage you to state the availability of your data in your submission. This may be a requirement of your funding body or institution. If your data is unavailable to access or unsuitable to post, you will have the opportunity to indicate why during the submission process, for example by stating that the research data is confidential. The statement will appear with your published article on ScienceDirect. For more information, visit the Data Statement page.
AFTER ACCEPTANCE

Online proof correction
To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Corresponding authors will receive an e-mail with a link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors.
If preferred, you can still choose to annotate and upload your edits on the PDF version. All instructions for proofing will be given in the e-mail we send to authors, including alternative methods to the online version and PDF.
We will do everything possible to get your article published quickly and accurately. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. It is important to ensure that all corrections are sent back to us in one communication. Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

Offprints
The corresponding author will, at no cost, receive a customized Share Link providing 50 days free access to the final published version of the article on ScienceDirect. The Share Link can be used for sharing the article via any communication channel, including email and social media. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Both corresponding and co-authors may order offprints at any time via Elsevier's Author Services. Corresponding authors who have published their article gold open access do not receive a Share Link as their final published version of the article is available open access on ScienceDirect and can be shared through the article DOI link.

AUTHOR INQUIRIES
Visit the Elsevier Support Center to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch.
You can also check the status of your submitted article or find out when your accepted article will be published.
