**DESCRIPTION**

*Infection Prevention in Practice* (IPIP), an open access companion title to the respected *Journal of Hospital Infection*, is the editorially independent online journal of the Healthcare Infection Society (HIS). IPIP provides a comprehensive fully open access resource for all those working in the field of prevention and treatment of healthcare-associated infections (HCAIs) worldwide.

In accordance with the charitable aims of the HIS, this fully open access online journal maximises the discoverability of latest research related to all aspects of infection. Fair article processing charges ensure publication in IPIP is also increasingly accessible to those authors (irrespective of funding) who wish to publish in a high quality, independently peer-reviewed journal.

IPIP welcomes high quality articles (in the form of local research studies, experiences, case reports, novel techniques, best practice and outbreak reports) in the field of infection prevention and control (IPC) that will influence clinical best practice and reduce the global burden of infection in healthcare. Articles should relate to HCAIs, either directly or indirectly, and should provide practical information to healthcare professionals working in the field of IPC that is applicable on a global or regional scale. We are particularly interested in papers that provide unique insight into the challenges of preventing HCAIs in developing countries. All submissions are subject to a rigorous single-blind peer review process.

We encourage submissions in the following areas: Antimicrobial stewardship (including antivirals and antifungals) Diagnostic stewardship and impact on infection prevention control Local hospital surveys and research in clinical infections Local epidemiological and environmental studies of infectious agents Novel infectious agent descriptions, strain characterisation and case reports that relate to HCAIs Novel treatments for HCAIs, including clinical trials Infection prevention and control challenges in developing countries Hospital and community healthcare management and resources Healthcare environments and building design Outbreaks - surveillance, management and learning points Research methodology and ethical considerations Vaccines that relate to HCAIs IPC outreach and educational activities Public health interventions in infection Clinical diagnosis of HCAIs

**ABSTRACTING AND INDEXING**

Directory of Open Access Journals (DOAJ)
EDITORIAL BOARD

Editor-in-Chief

Gemma Winzor, Public Health England Midlands and East Region, Birmingham, United Kingdom
Diagnostics, infection control, infections in immunocompromised hosts, intensive care, laboratory development

Editors

Jim Gray, Birmingham Children’s Hospital NHS Foundation Trust, Birmingham, United Kingdom
Antibiotic stewardship, obstetrics, paediatrics, point of care tests, test accuracy studies

Pauline Jumaa, Queen Elizabeth Hospital Birmingham, Birmingham, United Kingdom
Decontamination, hand hygiene, burns, molecular epidemiology, healthcare-associated infection

Nikunj Mahida, Queen’s Medical Centre, Nottingham, England, United Kingdom

International Editorial Board

Jaffar A. Al-Tawfiq, John Hopkins Aramco Healthcare, Dhahran, Saudi Arabia
Coronaviruses, emerging infectious diseases, healthcare-associated infections, mass gathering, MERS-CoV

Vincent C. C. Cheng, Queen Mary Hospital, Hong Kong, Hong Kong
Hand hygiene, infection control, multidrug resistant organisms, outbreak investigation, patient empowerment

Kartikeya Cherabuddi, University of Florida Division of Infectious Diseases and Global Medicine, Gainesville, Florida, United States of America
Antibiotic stewardship, antimicrobial resistance, C.

Luke Curtis, Curtis Consulting, Manchester, Greenfield, Missouri, United States of America
Aspergillosis, COVID-19, fungi, nosocomial infections, nutrition

Simon Dewar, Edinburgh Royal Infirmary, Edinburgh, United Kingdom
Antimicrobial stewardship, C.

Babak Eshrati, Iran University of Medical Sciences, Tehran, Islamic Republic of Iran
AIDS, epidemiology, health and safety, HIV, sexually-transmitted infections

Kathryn French, Queen Elizabeth Hospital Department of Microbiology, Birmingham, United Kingdom
Bacteraemia, bloodstream infections, infection control, microbiology

Mark Garvey, University Hospitals Birmingham NHS Foundation Trust, Birmingham, United Kingdom
Antimicrobial resistance, C.

Martin Kiernan, University of West London, London, United Kingdom
Environment, decontamination, human factors, pneumonia, device-related infections

Nesrene Omar, Mansoura University, Mansoura, Egypt
Clinical bacteriology, infection control, antibiotic resistance, research evaluation, pathogenic bacteria

Beryl A. Oppenheim, Cepheid and University Hospitals Birmingham, Birmingham, United Kingdom
Antimicrobial resistance, healthcare-associated infections, infections in immunocompromised hosts, rapid molecular diagnostics

Katie Prescott, Nottingham University Hospitals NHS Trust, Nottingham, United Kingdom
Critical care, infection control, intensive care, microbiology, S.

Prakash Ramakrishna, RajaRajeswari Medical College and Hospital Department of Microbiology, Bangalore, Karnataka, India
Assessment and examination, infection control, microbiology, nosocomial infections

Michael G. Schmidt, University of South Carolina, Columbia, South Carolina, United States of America
Air microbiology, biofilms, cleaning and decontamination, infectious disease, neonates

Rami Sommerstein, Bern University Hospital Department of Infectious Diseases, Bern, Switzerland
Epidemiology, mechanisms of nosocomial infection, nosocomial influenza, respiratory viruses, SSI prevention

Karen Vickery, Macquarie University, Sydney, Australia
Biofilms, disinfection, implantable medical devices, infection control

Andrew Christopher Whitelaw, Stellenbosch University Division of Medical Microbiology, Cape Town, South Africa
Antimicrobial resistance, antimicrobial stewardship, Enterobacteriaceae, hospital-acquired infections, S.
GUIDE FOR AUTHORS

INTRODUCTION

About the Journal

Infection Prevention in Practice (IPIP) is an editorially independent scientific publication of the Healthcare Infection Society (HIS). The aim of IPIP is to provide a comprehensive fully open access resource for all those working in the field of prevention and treatment of healthcare-associated infections (HCAIs) worldwide. The aim of the Journal is to publish high quality research and information relating to infection prevention and control that is relevant to an international audience.

Scope of the Journal

In accordance with the charitable aims of the HIS, this fully open access online journal will maximise the discoverability of latest research related to all aspects of infection. Fair article processing charges ensure publication in IPIP is also increasingly accessible to those authors (irrespective of funding) who wish to publish in a high quality, independently peer-reviewed journal.

IPIP welcomes high quality articles (in the form of local research studies, experiences, case reports, novel techniques, best practice and outbreak reports) in the field of infection prevention and control (IPC) that will influence clinical best practice and reduce the global burden of infection in healthcare. Articles should relate to HCAIs, either directly or indirectly, and should provide practical information to healthcare professionals working in the field of IPC that is applicable on a global or regional scale. We are particularly interested in papers that provide unique insight into the challenges of preventing HCAIs in developing countries.

We encourage submissions in the following areas:

- Antimicrobial stewardship (including antivirals and antifungals)
- Local hospital surveys and research in clinical infections
- Local epidemiological and environmental studies of infectious agents
- Novel infectious agent descriptions, strain characterisation and case reports that relate to HCAIs
- Novel treatments for HCAIs, including clinical trials
- Infection prevention and control challenges in developing countries
- Hospital and community healthcare management and resources
- Healthcare environments and building design
- Outbreaks - surveillance, management and learning points
- Research methodology and ethical considerations
- Vaccines that relate to HCAIs
- IPC outreach and educational activities
- Public health interventions in infection
- Clinical diagnosis of HCAIs

Contact Information and Queries

Authors may send queries to the Editorial Office.

Email: journals@his.org.uk
Tel.: +44 (0)207 125 0822

For further information regarding formatting articles for submission to IPIP, please refer to the 'Preparation' section below.

Types of article

IPIP invites articles of the following types:

Reviews

We welcome both general reviews, that summarize the current understanding and research on a topic, and systematic reviews, that provide a thorough critical assessment of current evidence.

Before you start work on a review we do advise that you check with the editorial office that the topic of your review is suitable, and that a similar review has not already been commissioned by the Editorial Team.

Reviews are generally divided into the following sections: Summary, Introduction, Methods, Results, Discussion, Conclusion, Acknowledgements and References. A combined Results and Discussion section may be appropriate, especially for general reviews.

General reviews
An unstructured Summary of up to 250 words is required. The word limit for the main text of the article (excluding the Summary and References) is 5000 words. Each figure and/or table counts as 200 words towards the total. Up to 75 references may be provided. The IPIP also accepts electronic supplementary material to support and enhance your review.

Systematic review articles
Authors of systematic reviews and meta-analyses are encouraged to present these according to the PRISMA guidelines for systematic reviews and meta-analyses (http://www.prisma-statement.org). A structured summary of up to 250 words is required. The word limit for the main text of the article (excluding the Summary and References) is 5000 words. Each figure and/or table counts as 200 words towards the total. Up to 75 references may be provided. IPIP also accepts electronic supplementary material to support and enhance your review.

Original Research Articles
Original research articles are divided into the following sections: Structured summary (250 words maximum), Introduction, Methods, Results, Discussion, Conclusions, Acknowledgements, Conflict of interest statement, Funding source and References. The word limit for the main text of the article (excluding the Summary and References) is 4000 words. Each figure and/or table counts as 200 words towards the total. IPIP also accepts electronic supplementary material to support and enhance your research.

Short-form Articles
These may extend to 2500 words, and include up to five figures or tables. There is a 250 word limit for the structured abstract. A maximum of 20 references may be provided.

Case Reports
All Case Report submissions should have written informed consent and include the statement "Written informed consent has been given and retained by authors".

Outbreak Reports
We welcome these, but there should be something new about them to justify publication, e.g. caused by a novel organism, associated with a new source or identified or controlled using novel methods. Outbreaks may be reported as full length articles, short reports or letters; please note that the manuscript must be structured according to the requirements for the chosen article type. Please click on template for more information. Authors must include a statement regarding informed consent, or if this was not available please include the following statement: "Informed consent was not gained from patients involved in this outbreak. All patients were treated according to clinical judgement and infection control practices in order to treat them and control the outbreak according to local guidelines. Patients did not undergo randomisation or intervention for the purpose of this report. Data has been analysed and presented anonymously."

Clinical Audits/Service Improvements

Clinical Trials

Commentaries
Commentaries are by invitation only. These are intended to provide background and context for published articles, and are usually written by an Editorial Board member or referee. The usual word limit is 700 words, and a maximum of 10 references. No tables or figures are allowed, and no summary or structural headings are required.

Debates in Infection Prevention
Opinion style articles whereby two differing opinions (written by different authors) argue for and against a controversial aspect of Infection Prevention. These are usually commissioned, however if you have an idea for a "Debate in Infection Prevention" please contact the editorial board to discuss. We recommend approximately 800 words per argument with a maximum of 10 references.

Letters to the Editor
We welcome letters relating to, or responding to, recently published items in the journal. Where appropriate, these will be shown to the authors of the original article prior to publication, who will be invited to respond. We also welcome correspondence relating to general observations about infection prevention and control practice. Letters should contain up to 800 words of text and no more than eight references. One table or figure is permitted. Letters should not contain structural headings or a summary.

Other Article Types
IPIP will consider publishing other article types that are relevant to infection prevention practice. We ask authors to check with the editorial office beforehand to check that the proposed subject matter and format are appropriate.

Ethics in publishing
Please see our information on Ethics in publishing.

Studies in humans and animals
If the work involves the use of human subjects, the author should ensure that the work described has been carried out in accordance with The Code of Ethics of the World Medical Association (Declaration of Helsinki) for experiments involving humans. The manuscript should be in line with the Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals and aim for the inclusion of representative human populations (sex, age and ethnicity) as per those recommendations. The terms sex and gender should be used correctly.

Authors should include a statement in the manuscript that informed consent was obtained for experimentation with human subjects. The privacy rights of human subjects must always be observed.

All animal experiments should comply with the ARRIVE guidelines and should be carried out in accordance with the U.K. Animals (Scientific Procedures) Act, 1986 and associated guidelines, EU Directive 2010/63/EU for animal experiments, or the National Institutes of Health guide for the care and use of Laboratory animals (NIH Publications No. 8023, revised 1978) and the authors should clearly indicate in the manuscript that such guidelines have been followed. The sex of animals must be indicated, and where appropriate, the influence (or association) of sex on the results of the study.

Informed consent and patient details
Studies on patients or volunteers require ethics committee approval and informed consent, which should be documented in the paper. Appropriate consents, permissions and releases must be obtained where an author wishes to include case details or other personal information or images of patients and any other individuals in an Elsevier publication. Written consents must be retained by the author but copies should not be provided to the journal. Only if specifically requested by the journal in exceptional circumstances (for example if a legal issue arises) the author must provide copies of the consents or evidence that such consents have been obtained. For more information, please review the Elsevier Policy on the Use of Images or Personal Information of Patients or other Individuals. Unless you have written permission from the patient (or, where applicable, the next of kin), the personal details of any patient included in any part of the article and in any supplementary materials (including all illustrations and videos) must be removed before submission.

Declaration of competing interest
All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. Authors should complete the declaration of competing interest statement using this template and upload to the submission system at the Attach/Upload Files step. Note: Please do not convert the .docx template to another file type. Author signatures are not required. If there are no interests to declare, please choose the first option in the template. More information.

Submission declaration and verification
Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in
English or in any other language, including electronically without the written consent of the copyright-holder. To verify originality, your article may be checked by the originality detection service Crossref Similarity Check.

Preprints
Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see 'Multiple, redundant or concurrent publication' for more information).

Additionally, authors may post the submitted version of a manuscript to a preprint server at any time. Please update any pre-publication preprint versions with a link to the final published article.

Use of inclusive language
Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns ("clinicians, patients/clients") as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

IPIP requires a hand signed signature from every individual author listed confirming that they have read and agree to the final draft before submission. Signatures created on a computer cannot be accepted.

Author contributions
For transparency, we encourage authors to submit an author statement file outlining their individual contributions to the paper using the relevant CRediT roles: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; Writing - review & editing. Authorship statements should be formatted with the names of authors first and CRediT role(s) following. More details and an example

Authorship
All authors should have made substantial contributions to all of the following: (1) the conception and design of the study, or acquisition of data, or analysis and interpretation of data, (2) drafting the article or revising it critically for important intellectual content, (3) final approval of the version to be submitted.

Changes to authorship
Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed.

Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

Reporting clinical trials
Randomized controlled trials should be presented according to the CONSORT guidelines. At manuscript submission, authors must provide the CONSORT checklist accompanied by a flow diagram that illustrates the progress of patients through the trial, including recruitment, enrollment, randomization, withdrawal and completion, and a detailed description of the randomization procedure. The CONSORT checklist and template flow diagram are available online.
Registration of clinical trials

Registration in a public trials registry is a condition for publication of clinical trials in this journal in accordance with International Committee of Medical Journal Editors recommendations. Trials must register at or before the onset of patient enrolment. The clinical trial registration number should be included at the end of the abstract of the article. A clinical trial is defined as any research study that prospectively assigns human participants or groups of humans to one or more health-related interventions to evaluate the effects of health outcomes. Health-related interventions include any intervention used to modify a biomedical or health-related outcome (for example drugs, surgical procedures, devices, behavioural treatments, dietary interventions, and process-of-care changes). Health outcomes include any biomedical or health-related measures obtained in patients or participants, including pharmacokinetic measures and adverse events. Purely observational studies (those in which the assignment of the medical intervention is not at the discretion of the investigator) will not require registration.

Copyright

Upon acceptance of an article, authors will be asked to complete a 'License Agreement' (see more information on this). Permitted third party reuse of open access articles is determined by the author’s choice of user license.

Author rights

As an author you (or your employer or institution) have certain rights to reuse your work. More information.

Elsevier supports responsible sharing

Find out how you can share your research published in Elsevier journals.

Role of the funding source

You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement then this should be stated.

Open access

Please visit our Open Access page for more information about our open access fees, the Healthcare Infection Society discount and eligibility criteria for fee waivers.

Elsevier Researcher Academy

Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

Language (usage and editing services)

The preferred language of the IPIP is British English.

Please adjust your spell checker if necessary. British spellings include diarrhoea, Haemophilus, haematology, paediatrics, leucocyte, leukaemia, bacteraemia, sulphonamides, aetiology. Please note the journal uses UK 'z' spelling (e.g., colonizes) and meticillin not methicillin.

Always write in plain English - many of our readers will not be native English speakers. Please be careful to use terminologies that will be understandable internationally, for example when describing the organisation of your hospital or healthcare system. Please be careful not to use jargon which will not be internationally understood.

Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the English Language Editing service available from Elsevier's WebShop (https://webshop.elsevier.com/language-editing-services/language-editing/) or visit our customer support site (https://service.elsevier.com) for more information.
Submission
Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

Please submit your article via http://www.editorialmanager.com/ipip

A mobile telephone number and e-mail address must be provided to aid processing of manuscripts.

PREPARATION

Peer Review and Editorial Process

Your submission will be received by the Editorial office.

Papers that are submitted without all Author's hand signed signatures or with references or other features that do not comply with the instructions to authors will be returned to their authors and will not be considered for publication until they have been corrected and resubmitted.

You will receive an acknowledgement by email containing your unique reference number; which should be used in all further communications, once it is being considered for publication.

All newly submitted papers are first considered by the Editorial team.

Some submissions are rejected at this stage, the main reason being that the subject material does not fall within the scope of IPIP. We aim to return a decision to the authors on these papers within 7 days, and will always provide a reason why we have rejected the paper.

The remaining papers are sent out for single blind peer review. Papers are typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final.

Editors are not involved in decisions about papers which they written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal's usual procedures, with peer review handled independently of the relevant editor and their research groups.

Accepted articles will be published online.

Use of word processing software
It is important that the file be saved in the native format of the word processor used. The text should be in single-column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. In particular, do not use the word processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc. When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). Note that source files of figures, tables and text graphics will be required whether or not you embed your figures in the text. See also the section on Electronic artwork.
To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

Article structure

It is the authors responsibility to put the manuscript into the required format before submission. Papers submitted that do not comply with these instructions will be returned to the author and not considered for publication until they have been resubmitted.
Depending on the article type the following headings must be used. You may also use subheadings to break up the text, but footnotes should be avoided. All pages of your manuscript should be numbered consecutively in the following order: title page, text, references, tables, figures, legends.

For **Case Reports** and **Outbreak Reports**, please use the following structure:

**Introduction** - Include a brief statement outlining the purpose and context of your paper but leave discussion for the Discussion section.

**Presentation of Case**

**Discussion** - Include any weaknesses or limitations of your study here but do not introduce any new results.

**Conclusion** - The main conclusions may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion section.

For **Clinical Audits**, please use this structure:

**Introduction**

**Standards** - Detail the standards used to compare your practice against

**Methods** - You can include preliminary results in the Methods section if necessary.

**Results** - This should be a statement of Results, without discussion of their significance or relationship to those of others. You can present this information in text or in figures or tables, but not both.

**Discussion and Recommendations**

**Conclusion**

For **Surveys** and **Clinical Trials**, please follow this structure: **Introduction**, **Methods**, **Results**, **Discussion**, **Conclusion**

**Appendices**

If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

**Essential title page information**

You should show the article title, names of all authors (but not their degrees) and the name of the institution or department where the work was carried out, as well as the name, address, telephone and email address of the author to whom the proofs and correspondence should be sent if accepted. A running title not exceeding 40 characters and spaces should also be provided on the title page.

**Structured Summary**

The summary should explain briefly what was done, what was observed and what was concluded. Please note that this is arguably the most important part of the entire paper and will be the first, and perhaps the only, part of your paper that is read.

Summaries should be structured, with the following sub-headings:

**Background**,

**Presentation of Case or Methods**, **Discussion** and **Conclusion**.

Summaries must not exceed 250 words. MEDLINE/PubMed has a maximum limit of 250 words for published summaries; anything past 250 words is truncated resulting in the loss of the concluding portion of your summary.

**Keywords**

Please provide up to six keywords from your summary and list them immediately after the summary. You should use British spelling, avoiding general and plural terms and multiple concepts (avoid, for example, ‘and’, ‘of’). Be sparing with abbreviations - only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

**Abbreviations**

Define abbreviations that are not standard in this field in a footnote to be placed on the first page of the article. Such abbreviations that are unavoidable in the abstract must be defined at their first mention there, as well as in the footnote. Ensure consistency of abbreviations throughout the article.
Acknowledgements
You should acknowledge any help received in carrying out the work, including supply of bacterial strains, permission to study patients, phage or biotyping of strains, language or writing help. Acknowledgements should appear in a separate section before the references.

Numbers and Measurements
Write out numbers one to nine unless they are measurements (e.g. 5 mL). Spell out numbers greater than nine if they begin a sentence, or when clarity requires it. Numbers above and including 10,000 have a comma. A decimal point is preceded by a number or cypher, e.g. '0.5'. Decimal points in columns should be aligned vertically.

Measurements may be expressed in SI or non-metric units. Use 10 mL/h rather than -1 or per. When referring to microbial concentrations use expressions such as '10x', not 'x log10'. When referring to changes in microbial concentration, use expressions such as 'reduced by a factor of 10x', not 'reduced by x log10'; 'a log10 reduction factor of x' may also be used.

Bacteria Nomenclature
Organisms should be referred to by their scientific names according to the binomial system. When first mentioned the name should be spelt in full and written in italics. Afterwards the genus should be abbreviated to its initial letter, e.g. 'S. aureus' not 'Staph. aureus'. If abbreviation is likely to cause confusion or render the intended meaning unclear spell out the names of microbes in full.

When the genus alone is used as a noun or adjective, use lower case roman not italic, e.g. 'organisms were staphylococci' and 'acinetobacter infection'. If the genus is specifically referred to, use italics, e.g. 'organisms of the genus Staphylococcus'. For genus in plural, use lower case roman e.g. 'salmonellae'; plurals may be anglicized e.g.'salmonellas'. For trivial names, use lower case roman e.g. 'meningococcus'.

Statistics
Include $P$ values and confidence intervals where appropriate. The name and version of any statistical computer package should be written out in full.

Drugs
These should be referred to by their approved generic names. Do not use the proprietary name, as this may vary between countries.

Date Format
Dates should be written in full with superscript "th", e.g. 20th September 2001. Otherwise, use European Date Format, i.e. 20/9/2001, not 9/20/2001.

Footnotes
Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors can build footnotes into the text, and this feature may be used. Otherwise, please indicate the position of footnotes in the text and list the footnotes themselves separately at the end of the article. Do not include footnotes in the Reference list.

Additional points to note
Use two carriage returns to end headings and paragraphs. Type text without end of line hyphenation, except for compound words. Do not use the lower case letter 'l' (el) for '1' (one) or 'O' for '0'. (They have different typesetting values.) Be consistent with punctuation and only insert a single space between words. Please include a list of any special characters you have had to use, e.g. Greek letters used in mathematical equations.

The Editor retains the customary right to make changes in style and language without consultation to ensure accuracy, clarity and comprehension to our wide readership.

Formatting of Funding Sources
List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill and Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].
It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, please include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

**Artwork**

*Electronic artwork*

**General points**

- Make sure you use uniform lettering and sizing of your original artwork.
- Embed the used fonts if the application provides that option.
- Aim to use the following fonts in your illustrations: Arial, Courier, Times New Roman, Symbol, or use fonts that look similar.
- Number the illustrations according to their sequence in the text.
- Use a logical naming convention for your artwork files.
- Provide captions to illustrations separately.
- Size the illustrations close to the desired dimensions of the published version.
- Submit each illustration as a separate file.
- Ensure that color images are accessible to all, including those with impaired color vision.

A detailed guide on electronic artwork is available.

**You are urged to visit this site; some excerpts from the detailed information are given here.**

**Formats**

If your electronic artwork is created in a Microsoft Office application (Word, PowerPoint, Excel) then please supply 'as is' in the native document format. Regardless of the application used other than Microsoft Office, when your electronic artwork is finalized, please 'Save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):

- EPS (or PDF): Vector drawings, embed all used fonts.
- TIFF (or JPEG): Color or grayscale photographs (halftones), keep to a minimum of 300 dpi.
- TIFF (or JPEG): Bitmapped (pure black & white pixels) line drawings, keep to a minimum of 1000 dpi.
- TIFF (or JPEG): Combinations bitmapped line/halftone (color or grayscale), keep to a minimum of 500 dpi.

**Please do not:**

- Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); these typically have a low number of pixels and limited set of colors;
- Supply files that are too low in resolution;
- Submit graphics that are disproportionately large for the content.

**Color artwork**

Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF) or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these figures will appear in color online (e.g., ScienceDirect and other sites). Further information on the preparation of electronic artwork.

**Illustration services**

Elsevier's Author Services offers Illustration Services to authors preparing to submit a manuscript but concerned about the quality of the images accompanying their article. Elsevier's expert illustrators can produce scientific, technical and medical-style images, as well as a full range of charts, tables and graphs. Image 'polishing' is also available, where our illustrators take your image(s) and improve them to a professional standard. Please visit the website to find out more.

**Figures**

Illustrations should be in finished form suitable for reproduction. Photographs should have strong contrast and be trimmed to exclude unnecessary background. Figure details should be easily discriminated at the final size. Colour photographs will be considered only if essential.
**Figure captions**
Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

All illustrations are to be numbered with arabic numerals as Figures 1, 2, 3 etc. without abbreviation, in the order of their first mention in the text.

A short explicit legend must be provided for each figure. All such legends should be listed together in the final section of the manuscript.

**Tables**
Please submit tables as editable text and not as images. Tables should be numbered consecutively in accordance with their appearance in the text, in Roman numerals (e.g. Table III). Each table should be on a separate sheet after the references and should include a title which makes the meaning clear without reference to the text. Use '-' for 'no observation', or 'not measured'. Please avoid using vertical rules and shading in table cells.

**References**
In the text, consecutively number your references in the order in which they are first mentioned, and identify them in square brackets, for example 'as noted by Smith [4].'

Quoted references should be listed in numerical (not alphabetical) order at the end of the article. References cited in tables or in figure legends should be numbered sequentially according to the first mention in the text of the particular table or illustration. Please ensure that every reference cited in the text is also present in the reference list (and vice versa).

Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.

**Reference links**
Increased discoverability of research and high quality peer review are ensured by online links to the sources cited. In order to allow us to create links to abstracting and indexing services, such as Scopus, CrossRef and PubMed, please ensure that data provided in the references are correct. Please note that incorrect surnames, journal/book titles, publication year and pagination may prevent link creation. When copying references, please be careful as they may already contain errors. Use of the DOI is highly encouraged.

A DOI is guaranteed never to change, so you can use it as a permanent link to any electronic article. An example of a citation using DOI for an article not yet in an issue is: VanDecar J.C., Russo R.M., James D.E., Ambeh W.B., Franke M. (2003). Aseismic continuation of the Lesser Antilles slab beneath northeastern Venezuela. Journal of Geophysical Research, https://doi.org/10.1029/2001JB000884. Please note the format of such citations should be in the same style as all other references in the paper.

**Web references**
As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

**Data references**
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

**References in a special issue**
Please ensure that the words 'this issue' are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.
Reference style
Text: Indicate references by number(s) in square brackets in line with the text. The actual authors can be referred to, but the reference number(s) must always be given.
Example: '..... as demonstrated [3,6]. Barnaby and Jones [8] obtained a different result ....'
List: Number the references (numbers in square brackets) in the list in the order in which they appear in the text.
Examples:
Reference to a journal publication:
Reference to a journal publication with an article number:
Reference to a book:
Reference to a chapter in an edited book:
Reference to a website:
Reference to a dataset:
Reference to software:

Journal abbreviations source
Journal names should be abbreviated according to the List of Title Word Abbreviations.

Video
Elsevier accepts video material and animation sequences to support and enhance your scientific research. Authors who have video or animation files that they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table by referring to the video or animation content and noting in the body text where it should be placed. All submitted files should be properly labeled so that they directly relate to the video file's content. In order to ensure that your video or animation material is directly usable, please provide the file in one of our recommended file formats with a preferred maximum size of 150 MB per file, 1 GB in total. Video and animation files supplied will be published online in the electronic version of your article in Elsevier Web products, including ScienceDirect. Please supply 'stills' with your files: you can choose any frame from the video or animation or make a separate image. These will be used instead of standard icons and will personalize the link to your video data. For more detailed instructions please visit our video instruction pages. Note: since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and the print version for the portions of the article that refer to this content.

Data visualization
Include interactive data visualizations in your publication and let your readers interact and engage more closely with your research. Follow the instructions here to find out about available data visualization options and how to include them with your article.

Supplementary material
IPIP accepts electronic supplementary material to support and enhance your scientific research. Supplementary files offer the author additional possibilities to publish supporting applications, high-resolution images, background datasets, sound clips and more. Supplementary files supplied will be published online alongside the electronic version of your article in Elsevier Web products, including ScienceDirect: http://www.sciencedirect.com. In order to ensure that your submitted material is directly usable, please provide the data in one of our recommended file formats. Authors should
submit the material in electronic format together with the article and supply a concise and descriptive caption for each file. For more detailed instructions please visit our artwork instruction pages at https://www.elsevier.com/artworkinstructions.

Supplementary material ordinarily applies to Reviews only and will be published at the discretion of the Editor.

**Research data**

*Infection Prevention in Practice* encourages you to share data that supports your research publication in an appropriate data repository, and enables you to interlink the data with your published articles. If you are sharing data, you are encouraged to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation.

Research data refers to the results of observations or experimentation that validate research findings. To facilitate reproducibility and data reuse, this journal also encourages you to share your software, code, models, algorithms, protocols, methods and other useful materials related to the project.

For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

**Preprint policy**

This journal will consider for review articles which have been made available previously as preprints. Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see Multiple, redundant or concurrent publication for more information). Additionally, authors may post the submitted version of a manuscript to a preprint server at any time. Please update any pre-publication preprint versions with a link to the final published article.

**Submission Checklist**

A submission check list and FAQs can be found here

**Tracking the Progress of your Submission Prior to Acceptance**

The corresponding author can login to Editorial Manager at any time to check the status of your submitted article.

The following statements give an indication of its status in the peer-review process.

'With Editor'
The Editor has received your submission for initial consideration.

'Under review'
Your submission is being peer reviewed.

'All reviews complete'
The requested peer reviews have been completed. After assessment of the reviews additional review maybe required. In such cases the status will return to 'Under review' until the additional reviews are complete.

'With Editor'
The Editorial Team are processing your submission. Initially it will be considered whether to send for peer review but submission return to this status after peer review is complete. Please note there are many types of Editors within the team and the status will not change as it moves between them.

**AFTER ACCEPTANCE**

**Proofs**

One set of page proofs (as PDF files) will be sent by e-mail to the corresponding author (if we do not have an e-mail address then paper proofs will be sent by post) or a link will be provided in the e-mail so that authors can download the files themselves. To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Elsevier now provides authors with PDF proofs which can be annotated; for this you will need to download the free Adobe Reader, version 9 (or higher). Instructions on how to annotate PDF files will accompany the proofs (also given online). The exact system requirements are given at the Adobe site.
If you do not wish to use the PDF annotations function, you may list the corrections (including replies to the Query Form) and return them to Elsevier in an e-mail. Please list your corrections quoting line number. If, for any reason, this is not possible, then mark the corrections and any other comments (including replies to the Query Form) on a printout of your proof and scan the pages and return via e-mail. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. We will do everything possible to get your article published quickly and accurately. It is important to ensure that all corrections are sent back to us in one communication: please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

**Offprints**
The corresponding author will be notified and receive a link to the published version of the open access article on ScienceDirect. This link is in the form of an article DOI link which can be shared via email and social networks. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Both corresponding and co-authors may order offprints at any time via Elsevier’s Author Services.
