DESCRIPTION

Integrative Medicine Research (IMR) is the official journal of Korea Institute of Oriental Medicine (KIOM). The journal is a quarterly, single-blind peer-reviewed, open access journal focused on evidence-based scientific research in integrative medicine, traditional medicine, and complementary and alternative medicine. The journal aims to provide new research perspectives on holistic integrative health, innovative health preservation approaches, and convergence for clinical medicine and biomedical sciences.

IMR aims to publish high-quality papers that are of high interest to an international readership, consisting of researchers, clinical practitioners, and others concerned with clinical practice, research methodology, and education and policy development in integrative medicine. The current focus of the journal is globally diversified and IMR welcomes papers of international research collaborations and papers from around the world.

IMR publishes articles of basic science research and clinical research, including randomized controlled trials, intervention studies, cohort studies, observational studies, diagnostic test accuracy and reliability studies, qualitative and mixed method studies, animal studies, systematic reviews and narrative reviews. The types of publications considered are review articles, original articles, letters to the editor, commentaries, and short communications relating to integrative medicine.

EDITORIAL BOARD

Editor-in-Chief
Jin Yong Lee, Korea Institute of Oriental Medicine, Daejeon, South Korea
Traditional medicine, allergic disease, autoimmune disorder, pediatric healthcare

Associate Editor
Myeong Soo Lee, Korea Institute of Oriental Medicine Clinical Medical Division, Daejeon, South Korea
Complementary medicine, Acupuncture, Tai chi, Systematic reviews, Meta-analysis / Evidence based medicine, Clinical practice guidelines, Clinical trials, Reporting guidelines

Editorial Advisory Board
Brian M. Berman, University of Maryland, Baltimore, United States of America
integrative medicine, mind body medicine, acupuncture, pain management
Gerard Bodeker, University of Oxford Green Templeton College, Oxford, United Kingdom
Lifespan Wellness and Integrative Healthcare
Ke-ji Chen, China Academy of Chinese Medical Sciences Xiyuan Hospital, Beijing, China
traditional medicine, pattern identification, blood stasis, cardiovascular disease
Ka-Kit Hui, University of California Los Angeles Center for East-West Medicine, Los Angeles, United States of America
acupuncture, Chinese medicine, chronic pain, Geriatrics, integrative medicine, integrative oncology
Klaus Linde, Technical University of Munich, Munich, Germany
evidence based medicine, acupuncture, systematic review, methodology
Denis Noble, University of Oxford, Oxford, United Kingdom
Physiology, Biophysics, Heart, Evolutionary Biology, Systems Biology
Chun-Su Yuan, The University of Chicago, Chicago, United States of America
Herbal medicine, new drug development
Boli Zhang, Tianjin University of Traditional Chinese Medicine, Tianjin, China
traditional Chinese medicine, internal medicine, hematology, stroke, cardiovascular disease, infectious disease

Editorial Board Members
Terje Alraek, UiT The Arctic University of Norway, Tromsø, Norway
Acupuncture, autonomic dysregulation, methodology, pain, recurrent urinary tract infections
Ichiro Arai, Nihon Pharmaceutical University, Fukiage-gun, Japan
herbal medicine, policy, kampo
Susan Arentz, Western Sydney University, Penrith, Australia
istopathy, clinical practice guideline
Mike Armour, Western Sydney University, Penrith, Australia
Complementary medicine, women's health, pelvic and menstrual pain
Xinghua Bai, Beijing University of Chinese Medicine School of Traditional Chinese Medicine, Beijing, China
Acupuncture, clinical practice guidelines, gastroenterology, medical history and theory, visible holism
Rudolf Bauer, Karl Franzens University Graz Pharmacognosy, Graz, Austria
Pharmacokinetics, phytochemicals, pharmacodynamics
Zhaoxiang Bian, Hong Kong Baptist University School of Chinese Medicine, Kowloon Tsai, Hong Kong
Herbal medicine, clinical trials, reporting guidelines, and herbal drug development
Stephen J Birch, Kristiania University College, Oslo, Norway
acupuncture, pattern identification, clinical practice guidelines, placebo
Benno Brinkhaus, Charite University Hospital Berlin, Berlin, Germany
acupuncture, clinical trial, herbal medicine, methodology
Youn Byoung Chae, Kyung Hee University, Seoul, South Korea
acupuncture, cognitive neuroscience, neuroimaging, psychophysics, social neuroscience
Dennis Chang, Western Sydney University, NICM Health Research Institute, Westmead, Australia
Pharmacology, Chinese Medicine, Herbal Drugs
Fang-Pey Chen, National Yang Ming Chiao Tung University - Yangming Campus, Taipei, Taiwan
traditional medicine, clinical trial, acupuncture, data science
Yaolong Chen, Lanzhou University, Lanzhou, China
Evidence-based medicine, Clinical practice guidelines, Reporting guideline, GRADE
William Cho, Queen Elizabeth Hospital, Department of Clinical Oncology, Hong Kong, Hong Kong
Cancer research in the aspects of cancer biomarkers, non-coding RNA, genomics, proteomics, next-generation sequencing, bioinformatics as well as evidence-based Chinese medicine, diabetes, meta-analysis
Jun Yong Choi, Pusan National University, Geumjeong-gu, South Korea
Herbal medicine, acupuncture, pulmonary medicine, allergy, clinical trial

Yung Hyun Choi, Dong-Eui University, Busan, South Korea
Biochemistry, cell biology, molecular biology, Oncology, ophthalmology

Vincent Chung, The Chinese University of Hong Kong The Jockey Club School of Public Health and Primary Care, Hong Kong, Hong Kong
Evidence based healthcare

Kieran Cooley, Canadian College of Naturopathic Medicine, Research & Clinical Epidemiology, Toronto, Canada
Naturopathic medicine, Integrative medicine, Clinical epidemiology, Natural health products, Clinical research

Holger Cramer, University of Tübingen, Tübingen, Germany
Evidence-based medicine, Yoga, Systematic review

Caroline Ee, Western Sydney University, Penrith, Australia
Acupuncture, integrative medicine, women's health

Arturo Figueroa, Texas Tech University, Lubbock, United States of America
exercise science, clinical trial, cardiac autonomic function, vascular function

Isabelle Gaboury, University of Sherbrooke, Department of Family Medicine and Emergency Medicine, Sherbrooke, Canada
Health promotion, child health care

Daniel F Gallego-Pérez, The University of North Carolina at Chapel Hill, Chapel Hill, United States of America
Public health, global healthcare, health informatics policy

Carlo Maria Giovanardi, Association of Bolognese Acupuncturists Doctors, Bologna, Italy
Acupuncture, traditional Chinese medicine

Brenda Gollanu, Stanford University, Stanford, United States of America
Pediatric integrative medicine, acupuncture, pain management

Aviad Haramati, Georgetown University, Washington, United States of America
Complementary and alternative medicine therapies, medical education

Susanne Hempel, Pardee RAND Graduate School, Santa Monica, United States of America
evidence mapping, evidence synthesis, evidence based medicine, systematic review

Elisabeth Hsu, University of Oxford, Oxford, United Kingdom
medical anthropology, Ethnobotany, sensory experience

Jennifer Hunter, Western Sydney University, Penrith, Australia
clinical practice guidelines

Shin-Jang Hwang, Taipei Veterans General Hospital, Taipei, Taiwan
Community medicine, public healthcare, bioinformatics

Nadine Ijaz, Carleton University, Ottawa, Canada
Complementary and alternative medicine policy management and strategies

Tae-Hun Kim, Kyung Hee University, Seoul, South Korea
Traditional medicine, acupuncture, evidence based medicine, clinical trials

Ohmin Kwon, Korea Institute of Oriental Medicine, Daejeon, South Korea
Traditional medical history, medical philosophy

Lixing Lao, Virginia University of Integrative Medicine, Fairfax, United States of America
Clinical trials and pre-clinical studies in acupuncture and Chinese herbal medicine

Clara Bik San Lau, The Chinese University of Hong Kong Institute of Chinese Medicine, Hong Kong, Hong Kong
Herbal medicine, natural product, pharmacognosy

Jungtae Leem, Wonkwang University, Iksan, South Korea
Traditional medicine, herbal medicine, acupuncture, clinical study, systematic review

Cun-Zhi Liu, Beijing University of Chinese Medicine, Beijing, China
Acupuncture, clinical trial, mechanism

Jian-Ping Liu, Beijing University of Chinese Medicine Center for Evidence-Based Chinese Medicine, Beijing, China
Evidence-based medicine, Traditional Chinese medicine, Integrative medicine, Clinical trials, Research methodology

Yue Liu, China Academy of Chinese Medical Sciences Xiyuan Hospital, Beijing, China
Traditional Medicine, Cardiovascular disease, Evidence-based medicine, Chinese medicine, Diabetes, Clinical trial, Gut microbiota, Acupuncture

Zhishun Liu, China Academy of Chinese Medical Sciences, Beijing, China
Acupuncture, electroacupuncture, clinical trial

Weidong Lu, Harvard University, Cambridge, United States of America
Oncology, Acupuncture, Herbal medicine, Pain

Jun J. Mao, Memorial Sloan Kettering Cancer Center, New York, United States of America
integrative medicine, oncology
Early Career Editorial Board Members

Leandro Borges, Cruzeiro do Sul University, SAO PAULO, Brazil
Exercise Medicine, immune system, clinical studies

Yujin Choi, Korea Institute of Oriental Medicine, Daejeon, South Korea

Kyungsun Han, Dongguk University Ilsan Oriental Hospital, Goyang-si, South Korea
Republic of Rehabilitation, chuna manual therapy, spinal diseases, obesity

Xiao-Yang Hu, University of Southampton, Faculty of Medicine, Southampton, United Kingdom
Infectious diseases, gynecological conditions, systematic reviews, clinical trials

Soobin Jang, Daegu Haany University, Gyeongsan, South Korea
Preventive Medicine, Korean Medicine

Xinyan Jin, Beijing University of Chinese Medicine Center for Evidence-Based Chinese Medicine, Beijing, China
Traditional Chinese medicine, Gynecology, Evidence based medicine, Breast disease, Clinical trial

Yongjoo Kim, Sangji University, Wonju, South Korea
Republic of Epidemiology, Integrative Medicine, Social &, Behavioral Sciences, Statistical Modeling

Chan-Young Kwon, Dong-Eui University, Busan, South Korea
Neuropsychiatry, Geriatric psychiatry, Korean medicine, Mind-body medicine, Systematic review

Boram Lee, Korea Institute of Oriental Medicine, Daejeon, South Korea
Pediatrics, Korean Medicine, clinical research

Jeremy Ng, University of Ottawa, Ottawa, Canada
Natural health products, Complementary and alternative medicine, Quality of information, Journalology, Metascience, Bibliometrics

Jiyoon Won, Dong-Eui University, Busan, South Korea
Republic of Acupuncture, research methodology

Charlene Hoi Lam Wong, The Chinese University of Hong Kong, Hong Kong, Hong Kong
Evidence-based healthcare, implementation research, cancer palliative care, quantitative and qualitative data analysis

Xiao Xu, Zhejiang Chinese Medical University, Hangzhou, China
Evidence-based integrative rheumatology, molecular mechanism (OMIC), clinical trials, systematic reviews

Managing Editor

Eunhye Song, Korea Institute of Oriental Medicine, Daejeon, South Korea
Preventive medicine, health promotion, information science

Assistant Managing Editor

Lin Ang, Korea Institute of Oriental Medicine, Daejeon, South Korea
Herbal medicine, Acupuncture, Systematic review
INTRODUCTION

*Integrative Medicine Research (IMR)* is the official journal of Korea Institute of Oriental Medicine (KIOM). The journal is a quarterly, single-blind peer-reviewed, open access journal focused on evidence-based scientific research in integrative medicine, traditional medicine, and complementary and alternative medicine. The journal aims to provide new research perspectives on holistic integrative health, innovative health preservation approaches, and convergence for clinical medicine and biomedical sciences.

IMR aims to publish high-quality papers that are of high interest to an international readership, consisting of researchers, clinical practitioners, and others concerned with clinical practice, research methodology, and education and policy development in integrative medicine. The current focus of the journal is globally diversified and IMR welcomes papers of international research collaborations and papers from around the world.

IMR publishes articles of basic science research and clinical research, including randomized controlled trials, intervention studies, cohort studies, observational studies, diagnostic test accuracy and reliability studies, qualitative and mixed method studies, animal studies, systematic reviews and narrative reviews. The types of publications considered are review articles, original articles, letters to the editor, commentaries, and short communications relating to integrative medicine.

IMR is indexed and abstracted in Science Citation Index Expanded (SCIE), Scopus, PubMed Central (PMC), Web of Science, Journal Citation Reports (JCR), Allied and Complementary Medicine Database (AMED), Embase, Cumulative Index to Nursing and Allied Health Literature (CINAHL), Directory of Open Access Journals (DOAJ), Korea Citation Index (KCI), ScienceDirect, and Google Scholar.

To receive table of contents by email, please register at: [https://www.imr-journal.com](https://www.imr-journal.com)

**Manuscript Submission**

Manuscripts for IMR should be submitted online via Editorial Manager ([www.editorialmanager.com/IMRES/](http://www.editorialmanager.com/IMRES/)).

For editorial questions, please contact the editorial office at imr@kiom.re.kr, +82 42 868 9392. For technical issues with the system, please contact Elsevier's Support Center at: [https://service.elsevier.com/app/home/supporthub/publishing/](https://service.elsevier.com/app/home/supporthub/publishing/) where live chat is available 24/7.

The article processing charges (APC) are fully covered by KIOM. Authors do not have to pay any APC or publication fee for this journal.

**Important information**

The Journal's manuscript template can be downloaded from: [https://www.elsevier.com/__data/promis_misc/IMRES_Manuscript_template_general.doc](https://www.elsevier.com/__data/promis_misc/IMRES_Manuscript_template_general.doc)

Additional templates for study specific manuscripts can be downloaded from:

* [https://www.elsevier.com/__data/promis_misc/IMRES_Manuscript_template_SR.doc](https://www.elsevier.com/__data/promis_misc/IMRES_Manuscript_template_SR.doc)
* [https://www.elsevier.com/__data/promis_misc/IMRES_Manuscript_template_RCT.doc](https://www.elsevier.com/__data/promis_misc/IMRES_Manuscript_template_RCT.doc)

Articles should be submitted in Microsoft Word (*.doc or *.docx). Manuscripts must be typed in English, 1.5- or double-spaced and 11- or 12-point font, using 1-inch (2.54 cm) margins. All pages must be numbered consecutively. Manuscript file should include a title page, manuscript text with section numbering, disclosure statements, references, tables, and figure legends, as a single file. ORCID iD is mandatory for all authors. Authors are required to be in compliance with the Uniform Requirements for Manuscripts Submitted to Biomedical Journals, which are compiled by the International Committee of Medical Journal Editors (ICMJE), available at [www.icmje.org](http://www.icmje.org)

Please ensure that the following submission documents and information are also included: A cover letter. It must include the corresponding author's name, address, telephone number and e-mail address. Disclosure statements (all mandatory): author contributions (CRediT), conflict of interests, funding, ethical statement, and data availability. Relevant reporting checklist: Authors are required to adhere their manuscripts to recognized reporting guidelines (refer to 3.1 Reporting guidelines) and submit the checklist during submission. Articles covering the use of human subjects in research (including trials and survey) must be approved by the research ethics review committee and their...
approval should be indicated in the manuscript. Articles where human subjects can be identified in descriptions, photographs or pedigrees must be accompanied by a statement of informed consent to publish (in print and online). Clinical trials are recommended to register at a clinical trial registration website such as https://clinicaltrials.gov or other primary registries recognized by WHO and the ICMJE which can be found at: www.who.int/clinical-trials-registry-platform/network/primaryregistries Articles covering the use of animals in experiments must be approved by the relevant authorities. Where material has been reproduced from other copyrighted sources, the letter(s) of permission from the copyright holder(s) to use the copyrighted sources must be supplied. For non-native English-speaking authors, manuscripts should be checked and edited by a native English speaker or by professional English editing services.

Types of article
Editorials
Editorials are invited articles or comments concerning a specific paper in the Journal or a topical issue in the field. Although editorials are normally invited or written by an Editor, unsolicited editorials may be submitted.

Commentaries
These are short, opinion articles which focus on current research topics and highlight articles of interest previously published elsewhere. Commentaries are generally invited by the Editors, but interested contributors with unsolicited commentaries are encouraged to submit them.

Review Articles
These should aim to provide the reader with a balanced overview of an important and topical subject within the Journal’s aims and scope. The review should have a clear methodology of reviewing the contents for systematic reviews, narrative reviews and any other types of reviews. Most reviews are solicited by the editors, but unsolicited submissions may also be considered for publication.

Original Articles
These may be clinical trials, cohort studies, diagnostic test accuracy studies, cost-effectiveness analyses, surveys, animal studies, and other research studies on integrative medicine and health, which represent new and significant contributions to the field.

Short communications
These are short reports of significant research. Short communications may include up to 2 figures or tables.

Case Reports
These are short discussions of a case or case series with unique features not previously described that make an important teaching point or scientific observation. Case reports should include the significance and purpose of the case presentation, the diagnostic methods of the case, the key data, and brief comments and suggestions with regard to the case. Refer to the CARE guidelines and submit CARE checklist with the case report manuscript.

Letters to the Editor
These include brief constructive comments concerning previously published articles in the journal or very brief research reports. Letters are edited, sometimes extensively, to sharpen their focus. They are externally peer reviewed and go through the same peer review process as review or original articles.

Education articles
These are educational articles which are intended to describe and explain certain methodology, definition, or technique used in research in the field of integrative medicine.

Guidelines
These are reporting guidelines or clinical guidelines which is to assist and foster researchers and clinicians the best practice in research or clinical practice.

BEFORE YOU BEGIN
**Reporting guidelines**
Authors are required to adhere their manuscripts to recognized reporting guidelines where appropriate, and submit a relevant, completed checklist. Depending on the research design used, more specific extensions may be necessary. Below is the list of sample reporting guidelines:
- Randomized controlled trials - CONSORT
- Systematic review or meta-analysis - PRISMA
- Observational studies - STROBE
- Case reports - CARE
- Animal research - ARRIVE

For other reporting guidelines, authors may refer to the Equator Network (Enhancing the QUAlity and Transparency Of health Research, http://www.equator-network.org/).

**Ethics in publishing**
For information on ethics in publishing and ethical guidelines for journal publication, refer to [https://www.journals.elsevier.com/integrative-medicine-research/policies-and-guidelines](https://www.journals.elsevier.com/integrative-medicine-research/policies-and-guidelines)

**Studies in humans and animals**
If the work involves the use of human subjects, the author should ensure that the work described has been carried out in accordance with the World Medical Association Declaration of Helsinki - Ethical Principles for Medical Research Involving Human Subjects, [https://www.wma.net/policies-post/wma-declaration-of-helsinki-ethical-principles-for-medical-research-involving-human-subjects/](https://www.wma.net/policies-post/wma-declaration-of-helsinki-ethical-principles-for-medical-research-involving-human-subjects/), the International Committee of Medical Journal Editors Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals, [http://www.icmje.org/recommendations/](http://www.icmje.org/recommendations/). The privacy rights of human subjects must always be observed.

Authors should include a statement in the manuscript that informed consent and an approval by the institutional review board (ethics committee) were obtained for research with human subjects. The IRB approval number should be stated.

All animal experiments should be carried out in accordance with the U.K. Animals (Scientific Procedures) Act 1986 and associated guidelines, EU Directive 2010/63/EU for animal experiments, or the National Institutes of Health guide for the care and use of laboratory animals (NIH Publications No. 8023, revised 1978), and comply with the ARRIVE guidelines. The authors should clearly indicate in the manuscript that such guidelines have been followed and an approval by the animal ethics committee has been obtained. All animal studies need to ensure they comply with the ARRIVE guidelines.

**Declaration of generative AI in scientific writing**
The below guidance only refers to the writing process, and not to the use of AI tools to analyse and draw insights from data as part of the research process.

Where authors use generative artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should only use these technologies to improve readability and language. Applying the technology should be done with human oversight and control, and authors should carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or biased. AI and AI-assisted technologies should not be listed as an author or co-author, or be cited as an author. Authorship implies responsibilities and tasks that can only be attributed to and performed by humans, as outlined in Elsevier’s AI policy for authors.

Authors should disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

**Disclosure instructions**
Authors must disclose the use of generative AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in the core manuscript file, before the References list. The statement should be placed in a new section entitled ‘Declaration of Generative AI and AI-assisted technologies in the writing process’.

**Statement**: During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.
This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, there is no need to add a statement.

Submission declaration and verification
Submission of an article implies that the work described has not been published previously (except in the form of an abstract or as part of a published lecture or academic thesis or as an electronic preprint, see https://www.elsevier.com/about/policies/sharing), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere, including electronically, in the same form, in English or in any other language, without the written consent of the copyright-holder. To verify originality, your article may be checked by the originality detection service Crossref Similarity Check: https://www.elsevier.com/editors/perk/plagiarism-complaints/plagiarism-detection.

Preprints
Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see 'Multiple, redundant or concurrent publication' for more information).

Use of inclusive language
Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns (“clinicians, patients/clients”) as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. When coding terminology is used, we recommend to avoid offensive or exclusionary terms such as "m*ast*r", "slave", "blacklist" and "whitelist". We suggest using alternatives that are more appropriate and (self-) explanatory such as "primary", "secondary", "blocklist" and "allowlist". These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

Reporting sex- and gender-based analyses
Reporting guidance
For research involving or pertaining to humans, animals or eukaryotic cells, investigators should integrate sex and gender-based analyses (SGBA) into their research design according to funder/sponsor requirements and best practices within a field. Authors should address the sex and/or gender dimensions of their research in their article. In cases where they cannot, they should discuss this as a limitation to their research's generalizability. Importantly, authors should explicitly state what definitions of sex and/or gender they are applying to enhance the precision, rigor and reproducibility of their research and to avoid ambiguity or conflation of terms and the constructs to which they refer (see Definitions section below). Authors can refer to the Sex and Gender Equity in Research (SAGER) guidelines and the SAGER guidelines checklist. These offer systematic approaches to the use and editorial review of sex and gender information in study design, data analysis, outcome reporting and research interpretation - however, please note there is no single, universally agreed-upon set of guidelines for defining sex and gender.

Definitions
Sex generally refers to a set of biological attributes that are associated with physical and physiological features (e.g., chromosomal genotype, hormonal levels, internal and external anatomy). A binary sex categorization (male/female) is usually designated at birth ("sex assigned at birth"), most often based solely on the visible external anatomy of a newborn. Gender generally refers to socially constructed roles, behaviors, and identities of women, men and gender-diverse people that occur in a historical and cultural context and may vary across societies and over time. Gender influences how people view themselves and each other, how they behave and interact and how power is distributed in society. Sex and gender are often incorrectly portrayed as binary (female/male or woman/man) and unchanging whereas these constructs actually exist along a spectrum and include additional sex categorizations and gender identities such as people who are intersex/have differences of sex development (DSD) or identify as non-binary. Moreover, the terms "sex" and "gender" can be ambiguous—thus it is important
for authors to define the manner in which they are used. In addition to this definition guidance and the SAGER guidelines, the resources on this page offer further insight around sex and gender in research studies.

**Changes to authorship**

Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editors. To request such a change before acceptance, the editors must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (letter signed by all authors) that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed. Only in exceptional circumstances will the editors consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editors will result in a corrigendum.

**Copyright**

Published manuscripts become the permanent property of Korea Institute of Oriental Medicine, and must not be published elsewhere without written permission. All articles published in the Journal are protected by copyright, which covers the exclusive rights to reproduce and distribute the article, as well as translation rights. No part of this publication may be reproduced, stored in any retrieval system, or transmitted in any form or by any means, electronic, mechanical, by photocopying, recording, or otherwise, without prior written permission from Korea Institute of Oriental Medicine. A copyright transfer form should be signed by all co-authors. On behalf of all the contributing authors, the corresponding author must confirm and agree to transfer their copyright online through an email instead of submitting the copyright transfer agreement. All other contributing authors may also confirm in the same manner.

**Open Access**

Every peer-reviewed article appearing in this journal will be published open access. This means that the article is universally and freely accessible via the internet in perpetuity, in an easily readable format immediately after publication. The author does not have any publication charges for open access. Korea Institute of Oriental Medicine will pay to make the article open access. A CC user license manages the reuse of the article (see https://www.elsevier.com/about/policies/open-access-licenses). All articles will be published under the following license:

*Creative Commons Attribution-Non Commercial-No Derivatives (CC BY-NC-ND):* for non-commercial purposes, lets others distribute and copy the article, and to include in a collective work (such as an anthology), as long as they credit the author(s) and provided they do not alter or modify the article.

**Acknowledgments**

If applicable, general acknowledgments for consultations, statistical analysis, etc., should be listed after main body of text, before the references, including the names of the individuals involved. All financial and material support for the research and the work should be stated in "Funding" instead.

**Author contributions**

The journal uses the CRediT taxonomy to define author contributions. Each author on a paper may have one or more CRediT contribution roles. CRediT author contribution statements should be provided during the submission. For more details on CRediT, see https://www.elsevier.com/authors/journal-authors/policies-and-ethics/credit-author-statement.

**Conflicts of Interests**

The corresponding author must inform the editor of any potential conflicts of interest that could influence the author's interpretation of the data or influence the acceptance of the manuscript. Examples of potential conflicts of interest are financial support from or connections to pharmaceutical companies, political pressure from interest groups, and academically related issues. Conflict of interest statements will be published at the end of the article with other disclosures, before the References section. Please consult the COPE guidelines (www.publicationethics.org/) on conflict of interests. Even when there is no conflict of interests, it should also be stated as "The authors have no conflict of interests to declare."
Funding
Any financial support (funds) received for the study must be stated at the end of the manuscript. If the sponsor took any role in the following, then briefly describe the role: in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source had no such involvement then this should be stated. Even when no funding was received, it should be stated as "none."

Ethical statement
Studies on humans or animals require relevant ethics committee approval and the approval number should be stated. For human subjects, an informed consent should also be retained by the author and documented in the paper. In exceptional circumstances (for example if a legal issue arises), the journal may request copies of the consents or evidence that such consents have been obtained. Unless the authors have written permission from the patient, the personal details of any patient included in any part of the article and in any supplementary materials must be removed before submission. For studies not involving human or animal, it should be stated that no ethics approval was needed.

Data availability
To foster transparency, stating the availability of the data is mandatory for the journal. If authors choose to publish their data, the data can be placed in a repository of their choice and its DOI can be stated in the data availability statement. Other options, for example, are to state that "The data will be made available upon request." With the data statement, the authors can be transparent about the data they used in an article. If your data is unavailable to access or unsuitable to post, please state that the research data is confidential: "The data that has been used is confidential and cannot be shared." The data availability statement will appear with your published article on ScienceDirect. For more information, visit the Data Statement page.

Supplementary material
Supplementary material such as raw or processed data, applications, images, and sound clips, can be published with the manuscript. Please supply a concise, descriptive caption for each supplementary file. Supplementary files will be published in the online version, exactly as they are received.

Submission
Submissions are submitted and reviewed online using the Editorial Manager. The system automatically collects some information from the uploaded files so that the authors do not have to manually input all the information. All the files are converted into a single PDF file to be used in the review process. Authors should check the PDF and submission details on the system as technical errors may occur. Editable files (e.g., Word) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail which can also be checked on the Editorial Manager.

Manuscript Preparation
The manuscript file should include the following parts: Title page Abstract Keywords Main text: 1. Introduction, 2. Methods, 3. Results, 4. Discussion Acknowledgment (if any) Author contributions (mandatory) Conflict of interest (mandatory) Funding (mandatory) Ethical statement (mandatory) Data availability (mandatory) Supplementary material as a single file (if any) References Tables (placed at the end of the manuscript) Figure legend

Title page
The title page should be compiled to the manuscript as a single file. The title page should include: category of paper, article title (full title and short running title), full names of all authors, institutions of authors (indicate all affiliations with a superscripted lowercase number after the author's name and in front of the appropriate affiliation), all contributing authors' ORCID iD numbers, and the corresponding author details (name, full address, ORCID iD, and e-mail). The journal allows up to two co-corresponding authors which should be indicated on the title page using an asterisk (*).

Abstract
An abstract is required for the following article categories: Review Article, Original Article, and Case Report, and Short Communication Abstracts should be no more than 250 words in length. Abstracts should be structured, with the following section headings: Background, Methods, Results and Conclusion. For clinical trials, trial registration information (registry name, number and site) should also be included at the end of the Abstract.

Keywords
3-5 relevant keywords are required for all articles. For selecting keywords, authors may refer to the Medical Subject Headings (MeSH) at the U.S. National Library of Medicine: https://meshb.nlm.nih.gov/search.

**Main Text**

The text for Original Articles, for example, should include the following sections: 1. Introduction, 2. Methods, 3. Results, and 4. Discussion. The Introduction should be as concise as possible, without subheadings. The Methods section should be sufficiently detailed. Subheadings may be used to organize the Methods, Results and Discussion. Limitations and conclusions should be included in Discussion. All sections should be numbered.

**Abbreviations**

Where a term/definition is continually referred to (i.e. ≥3 times in the text), write it in full when it first appears, followed by the subsequent abbreviation in parentheses (even if it was previously defined in the abstract); thereafter, the abbreviation can be used.

**Scientific names**

A formal scientific name conforming to the International Code of Nomenclature should be adhered to. For genes, standard international nomenclature for genes should be adhered to. For human genes, use genetic notation and symbols approved by the HUGO Gene Nomenclature Committee (www.genenames.org) or refer to PubMed (www.ncbi.nlm.nih.gov).

**Units**

The International System of Units (SI) must be used, with the exception of blood pressure values which are to be reported in mmHg. Please use the metric system for the expression of length, mass, volume, etc.

**References**

Authors are responsible for the accuracy and completeness of their references and for correct in-text citation.

In the main text, tables and figure legends References should be identified using superscripted numbers, in numerical order, and be placed after punctuation. References cited in tables or figure legends should be included in sequence at the point where the table or figure is first mentioned in the main text. Do not cite abstracts unless they are the only available reference to an important concept. Uncompleted work or work that has not yet been accepted for publication (i.e., "unpublished observation", "personal communication") are not recommended to be cited as references.

In the references list References should be limited to those cited in the text and listed in the order in which they appear in the text. References for journal articles should include, in the order of authors' last name and initials, article title, abbreviated journal title, year, volume and inclusive page numbers or article number. When there are more than 6 authors, the last names and initials the first 6 authors should be included, followed by "et al". Abbreviated journal titles should conform to those used in MEDLINE If citing a website, provide the author information, article title, website address and the date you accessed the information. Reference to an article that is in press must state the journal title, digital object identifier (DOI), and, if possible, the year and volume.

Examples are given below.

**Standard journal article:**

**Journal supplement**

**Journal article not in English but with English abstract**

**Book with edition**

Book with editors

Book chapter in book with editor and edition

Book series with editors

Bulletin

Electronic publications

Item presented at a meeting but not yet published

Item presented at a meeting and published

Thesis

Website

Company/manufacturer publication/pamphlet

Tables
Tables are numbered consecutively, in the order of their citation in the text. Tables should be placed at the end of the manuscript. Table legend example: Table 1. Demographic characteristics of patients [note: "Table 1," in bold font with end period; no end period after legend]. Shortening of some words inside table: year(s) · yr; month(s) · mo; day(s) · d; hour(s) · hr; minute(s) · min; second(s) · sec; and · &. Use en dashes for empty entries. Footnotes are indicated using these symbols (in order of appearance): *, †, ‡, §, |, ¶, * * [note: when > 10 footnotes, use superscripted lowercase letters]. Abbreviations used in the table, even when already defined in the text, should be defined and placed after the footnotes and presented like in this example: CT, computed tomography; MRI, magnetic resonance imaging. [note: the use of "," with a space on either side, semi-colon to separate, and a period after the last].
**Figures**

Figure legends should be submitted for all figures and should be brief and specific and placed on a separate sheet after the reference section. Figure legend example: Fig. 1. Demographic characteristics of patients. Figures must be in numerical order using Arabic numerals in the order of their citation in the text. Figures should be uploaded as separate files, not embedded in the manuscript file. Regardless of the application used, when your electronic artwork is finalized, please “save as” or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):

- EPS: Vector drawings. Embed the font or save the text as “graphics”.
- TIFF: Color or grayscale photographs (halftones)-use a minimum of 300 dpi.
- TIFF: Bitmapped line drawings-use a minimum of 1000 dpi.
- TIFF: Combination of bitmapped line/half-tone (color or grayscale)-use a minimum of 600 dpi.
- DOC, XLS or PPT: If your electronic artwork is created in any of these Microsoft Office applications, please supply “as is”.

Please do not:

- Supply files that are optimized for screen use (like GIF, BMP, PICT, WPG) as the resolution is too low;
- Supply files that are too low in resolution;
- Submit graphics that are disproportionately large for the content.

**REVIEW AND ACTION**

**The Editorial and Peer Review Process**

As a general rule, the receipt of a manuscript will be acknowledged within 2 weeks of submission; authors will be provided with a manuscript reference number for future correspondence. If an acknowledgment is not received in a reasonable period of time, the author should contact the Editorial Office (imr@kiom.re.kr).

Submissions are reviewed by the Editorial Office to ensure that it contains all parts. Submissions will be rejected if the author has not supplied all the material and documents as outlined in the Journal’s author guidelines. Manuscripts are then reviewed by the Editors, who make an initial assessment. If the manuscript does not appear to be of sufficient merit or is not appropriate for the Journal, the manuscript will be rejected without review. All other manuscripts are sent to 2 or more expert consultants for single-blind peer review. Authors will usually be notified within 12 weeks of the initial acknowledgment of whether the manuscript is accepted for publication, rejected, or subject to revision before acceptance. However, do note that delays are sometimes unavoidable.

**Appeals regarding manuscripts rejected by Integrative Medicine Research**

Integrative Medicine Research is able to consider only a relatively small percentage of submissions received for publication. Therefore, many good manuscripts are rejected without peer reviews. If your paper is declined without peer review, please do not appeal the decision. Doing so distracts the journal’s editors and reviewers from evaluating submissions and processing other manuscripts. If, however, the reviewer or editor evaluations are needed to be reassessed, the Editor-in-Chief will consider an appeal and reopen the manuscript’s file.

Any appeal must be made by the corresponding author to the Editorial Office by email prior to resubmitting the manuscript. Please do not resubmit a revised version of a rejected manuscript without an appeal to the Editorial office. Please do not resubmit until your original manuscript is released back to you. By waiting for the manuscript release, it ensures that your paper is processed under the same manuscript number, keeping the manuscript history intact.

Occasionally, a manuscript is rejected but the Editorial Board offers the option to resubmit a revised, abridged version as a Letter or Commentary.

**Roles of Editors and Editorial Board Members**

**Editor-in-Chief**
- Responsible for the whole journal content
- Select, appoint and manage associate editors and editorial board members
- Attract high-quality manuscripts

**Associate Editor**
- Assist EiC in getting manuscripts reviewed and published
- Assure quality of publications
- Attract high-quality manuscripts

**Managing Editor**
- Assist EiC and AEs
- Handle day-to-day editorial tasks
- Perform technical check on all submitted manuscripts

**Assistant Managing Editor**
- Assist ME
- Promote and advertise the Journal via social networking services

**Advisory Editorial Board**
- A group of respected scholars in the field of Traditional Medicine, Complementary and Alternative Medicine, and Integrative Medicine.
- Advise on policy and scope of the Journal

**Editorial Board**
- A group of respected scholars in the field of Traditional Medicine, Complementary and Alternative Medicine, and Integrative Medicine.
- Assist with peer review
- Encourage others to submit manuscripts or submit their own work
- Give feedback and suggestions on contents of the Journal

**Early Career Editorial Board**
- Assist with peer review
- Encourage others to submit manuscripts or submit their own work
- Promote the Journal

**Special issue organization**
The peer review process for Special Issues is also a single anonymized review process. All contributions will be initially assessed by the Editor-in-chief for suitability for the journal. Papers deemed suitable are then assigned to a Guest Editor who is appointed by the journal editorial board. All Guest Editors receive training on conducting peer review. The Guest Editor sends the manuscript to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Guest Editor makes a recommendation for the decision to the Editor in Chief. The Editor in Chief is responsible for the final decision regarding acceptance or rejection of articles. The Editor-in-Chief oversees the peer review process of all Special Issues to ensure the high standards of publishing ethics and responsiveness are respected. Guest Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the guest editor has an interest. Any such submission is subject to all of the journal's usual procedures, with peer review handled independently of the relevant editor and their research groups.

**Use of the Digital Object Identifier**
The Digital Object Identifier (DOI) may be used to cite and link to electronic documents. The DOI consists of a unique alpha-numeric character string which is assigned to a document by the publisher upon the initial electronic publication. The assigned DOI never changes. Therefore, it is an ideal medium for citing a document, particularly 'Articles in press' because they have not yet received their full bibliographic information. Example of a correctly given DOI (in URL format; here an article in the journal Physics Letters B): http://dx.doi.org/10.1016/j.physletb.2010.09.059. When you use a DOI to create links to documents on the web, the DOIs are guaranteed never to change.

**Proofs**
Corresponding authors will receive an e-mail with a link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors. All instructions for proofing will be given in the e-mail we send to authors, including alternative methods to the online version and PDF. We will do everything possible to get your article published quickly and accurately. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this
stage with permission from the Editor. It is important to ensure that all corrections are sent back to us in one communication. Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

**Queries**
For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

**PEER REVIEW**
This journal operates a single blind review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. More information on types of peer review.

**Data references**
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

**Preprint references**
Where a preprint has subsequently become available as a peer-reviewed publication, the formal publication should be used as the reference. If there are preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published, these may be referenced. Preprints should be clearly marked as such, for example by including the word preprint, or the name of the preprint server, as part of the reference. The preprint DOI should also be provided.

**Research data**
This journal encourages and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings, which may also include software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. If you are sharing data in one of these ways, you are encouraged to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

**Data linking**
If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.

For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.

In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

**Offprints**
The corresponding author will be notified and receive a link to the published version of the open access article on ScienceDirect. This link is in the form of an article DOI link which can be shared via email and social networks. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication.
AUTHOR INQUIRIES
Visit the Elsevier Support Center to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch. You can also check the status of your submitted article or find out when your accepted article will be published.
