The International Journal of Hygiene and Environmental Health serves as a multidisciplinary forum for original reports on exposure assessment and the reactions to and consequences of human exposure to the biological, chemical, and physical environment. Research reports, short communications, reviews, scientific comments, technical notes, and editorials will be peer-reviewed before acceptance for publication. Priority will be given to articles on epidemiological aspects of environmental toxicology, health risk assessments, susceptible (sub) populations, sanitation and clean water, human biomonitoring, environmental medicine, and public health aspects of exposure-related outcomes.

**DESCRIPTION**

**AUDIENCE**

Hygienists, epidemiologists, social hygienists, bacteriologists, physicians in environmental and industrial medicine

EDITORIAL BOARD

Editor-in-Chief
Antonia Calafat, National Center for Environmental Health, Atlanta, Georgia, United States
Research Interests: Biomonitoring design for exposure assessment and surveillance, Integration of biomonitoring science and epidemiology, Analytical methodology for biomonitoring of organic pollutants
Holger Koch, German Social Accident Insurance Fund Institute of Preventive and Occupational Medicine, Bochum, Germany
Research Interests: Human-Biomonitoring, Exposure Assessment, Risk Assessment, Endocrine Disruptors, Analytical Methods

Deputy Editor-in-Chief
Michael Wilhelm, Ruhr University of Bochum Institute of Hygiene and Microbiology Department of Hygiene Social and Environmental Medicine, Bochum, Germany
Research Interests: Water and health, Environmental medicine, Hygiene and environmental health, Toxicology, Human biomonitoring

Associate Editors
Iman Al-Saleh, King Faisal Specialist Hospital and Research Centre Environmental Health Program, Riyadh, Saudi Arabia
Research Interests: Human biomonitoring, Prenatal/postnatal environmental exposure, Biomarkers of exposure, In vitro genotoxicity testing
Randi J. Bertelsen, University of Bergen Department of Clinical Science, Bergen, Norway
Research Interests: Asthma, allergy, microbiota, chemical exposure, indoor environment
Aimin Chen, University of Pennsylvania Department of Biostatistics and Epidemiology, Philadelphia, Pennsylvania, United States
Research Interests: Children's environmental health, Environmental epidemiology, Developmental neurotoxicity in humans, Pregnancy and birth outcomes, Heavy metals and endocrine disruptors
Julie Herbstman, Columbia University Mailman School of Public Health, New York, New York, United States
Research Interests: Environmental epidemiology, Perinatal exposure, Neurodevelopment, Epigenetics, Endocrine disruptors, Aging
Mats Leifels, Nanyang Technological University Singapore Center for Life Science Engineering, Singapore, Singapore
Research Interests: Environmental Microbiology, Pathogens in the Aquatic Environment, Water, Sanitation and Hygiene, Molecular Methods
Curtis W Noonan, University of Montana College of Health Professions and Biomedical Sciences, Missoula, Montana, United States
Research Interests: Environmental epidemiology Air pollution, Respiratory, Child health Rural health
Dirk Taeger, German Social Accident Insurance Fund Institute of Preventive and Occupational Medicine, Bochum, Germany
Research Interests: Occupational cancer, Statistical methods in epidemiology, Health risk assessment

Paige Williams, Harvard University T H Chan School of Public Health, Boston, Massachusetts, United States
Research Interests: Reproductive and early pregnancy outcomes, Endocrine disrupting chemicals, Child development and pubertal maturation, Environmental mixtures, Epidemiological approaches for environmental cohort studies

Editorial Board

Lydia S. Abebe, USAID Bureau for Global Health, Arlington, Virginia, United States
Research Interests: Environmental pathogens, Legionella, free-living amoeba, AMR, biofilms

Nicholas J. Ashbolt, University of Alberta, School of Public Health, Edmonton Clinic Health Academy, Edmonton, Alberta, Canada
Research Interests: Human biomonitoring; environmental epidemiology; exposure; risk assessment

Lesa L. Aylward, Summit Toxicology LLP Falls Church, Falls Church, Virginia, United States
Research Interests: Human biomonitoring; environmental epidemiology; exposure; risk assessment

Jamie Bartram, University of North Carolina at Chapel Hill Gillings School of Global Public Health, Chapel Hill, North Carolina, United States
Research Interests: Connections between water (including sanitation and hygiene) and health; links between science, policy and practice, in both developing and developed; technologies for urban sanitation renewal; management systems for drinking-water safety and rural drinking-water supply; emerging issues (including water scarcity and climate change)countries

Georg Becher, University of Oslo Department of Chemistry, Oslo, Norway
Research Interests: Assessment of Human Exposure to Organic Pollutants and Toxicants

Michael Bloom, University at Albany Department of Environmental Health Sciences, Rensselaer, New York, United States
Research Interests: Environmental Epidemiology; Reproductive Epidemiology; Endocrine Disruptors

Hermann M. Bolt, Leibniz Research Centre for Working Environment and Human Factors, Dortmund, Germany
Research Interests: Endocrine disruptors, children’s health, environmental epidemiology

Kyungho Choi, Seoul National University Graduate School of Public Health, Seoul, Korea, Republic of
Research Interests: Environmental Toxicology, Endocrine Disruption, Thyroid Hormones, Phenolics, Personal Care Products

Krista Yorita Christensen, US Environmental Protection Agency Office of Research and Development, Duluth, Minnesota, United States
Research interests: epidemiology, environmental health

Jonny Crocker, University of Washington Department of Global Health, Seattle, Washington, United States
Research Interests: WASH, implementation science, and environmental health

Cynthia Curl, Boise State University Department of Community and Environmental Health, Boise, Idaho, United States
Research Interests: Agricultural health; pesticide exposure; biological monitoring

Heather Danysh, RTI Health Solutions Research Triangle Park, Research Triangle Park, North Carolina, United States

Caroline Delaire, Aquaya Institute Kenya, Nairobi, Kenya
Research Interests, Water safety management , water and sanitation policies, economics of water and sanitation, water treatment technologies, non revenue water, leak detection, developing countries

Stephanie Engel, University of North Carolina at Chapel Hill Gillings School of Global Public Health, Chapel Hill, North Carolina, United States
Research interests: Perinatal and Pediatric Epidemiology, Environmental Exposures, Biomarkers, Pregnancy complications and birth outcomes, Neurodevelopment, Endocrine Disruptors

Martin Exner, University Hospital Bonn Institute of Hygiene and Public Health, Bonn, Germany
Research Interests: Endocrine disrupting chemicals, Steroid hormones, Reproduction, Human biomonitoring, LC-MS/MS analysis

Marie Frederiksen, National Research Centre for the Working Environment, København, Denmark
Research Interests: Exposure to contaminants, PCB, flame retardants, occupational health, biomonitoring, analytical chemistry

Hermann Fromme, Bavarian Health and Food Safety Authority Department of Chemical Safety and Toxicology, München, Germany

Chris Gennings, Icahn School of Medicine at Mount Sinai Department of Environmental Medicine and Public Health, New York, New York, United States
Research Interests: Environmental mixtures, risk assessment, biostatistical methods

Philippe Grandjean, University of Southern Denmark Institute for Public Health, Odense, Denmark
Research Interests: Environmental epidemiology; Prenatal exposure delayed effects; Developmental programming; Neurodevelopmental toxicity; Immune system dysfunction

Monica Guxens, Centre for Research in Environmental Epidemiology, Barcelona, Spain
Research Interests: Child neuropsychological development (child cognitive and psychomotor development and behavioural problems), Early life air pollution exposure, Early life electromagnetic fields exposure, Early life chemicas and metals exposure, Early life environmental epidemiology, birth cohorts studies

Douglas Haines, Health Canada
Research Interests: Population Exposure and Human Biomonitoring

Philippe Hartemann, National Health Laboratory, Luxembourg, Luxembourg
Research Interests: Environmental Heath both from the microbiological side (ex. Legionella) and toxicology

Russ Hauser, Harvard University Department of Environmental Health, Boston, Massachusetts, United States
Research Interests: Endocrine disruptors, reproductive health, semen quality, pregnancy outcomes

Joachim Heinrich, Ludwig Maximilians University Munich, Munich, Germany

Caroline Herr, Bavarian Health and Food Safety Authority Munich, Munich, Germany

Christopher Higgins, Colorado School of Mines College of Engineering and Computational Sciences, Golden, Colorado, United States
Research Interests: Poly- and perfluoroalkyl substances (PFASs), AFFF, bioaccumulation

Erin Hines, National Health and Environmental Effects Research Laboratory Division of Toxicity Assessment Division, Research Triangle Park, North Carolina, United States
Research Interests: Biomonitoring, Environmental Chemicals/exposures, PFCsReproductive and Developmental Outcomes, Lactation

Barbara Hoffmann, University Hospital Dusseldorf Centre for Health and Society, Dusseldorf, Germany
Research Interests: Air pollution, noise, cardiovascular diease, metabolic and neurocognitive impairment

Nina T. Holland, University of California Berkeley School of Public Health, Berkeley, California, United States
Research Interests: Molecular epidemiology, children’s environmental health, genetics and epigenomics, cytogetic biomarkers, biobanking

David Andrew Holcomb, University of North Carolina at Chapel Hill Department of Epidemiology, Chapel Hill, North Carolina, United States
Research Interests: Environmental pathogens, environmental and spatial epidemiology, antimicrobial resistance, exposure measurement error, molecular methods

Allan C. Just, Icahn School of Medicine at Mount Sinai, New York, New York, United States
Research Interests: Environmental epidemiology, air pollution, satellite remote sensing, children’s environmental health, epigenomics

Haidong Kan, Fudan University Department of Environmental Health, Shanghai, China
Research Interests: Air pollution, climate change, environmental epidemiology

Monika Kasper-Sonnenberg, German Social Accident Insurance Fund Institute of Preventive and Occupational Medicine, Bochum, Germany

Thomas Kistemann, University Hospital Bonn Institute of Hygiene and Public Health, Bonn, Germany
Research Interests: Geography

Lisbeth Knudsen, University of Copenhagen Department of Public Health, Copenhagen, Denmark

Marike Kolossa-Gehring, Umweltbundesamt Aussenstelle Berlin-Grunewald, Berlin, Germany
Research Interests: Human Biomonitoring, Health bases guidance values (toxicological risk assessment), Reproductive toxicology, Regulatory toxicology, Endocrine disruptors

Axel Kramer, University Medicine Greifswald Institute of Hygiene and Environmental Medicine, Greifswald, Germany

Jean-Francois Loret, Suez Environment International Centre of Research on Water and the Environment, Le Pecq, France

Tarek Manasfi, Eawag Department of Environmental Chemistry, Duebendorf, Switzerland
Research Interests: Water treatment, ozonation, disinfection byproducts, environmental non-target screening, genotoxicity

Ana Maria Mora, National University of Costa Rica Regional Institute for Toxic Substances Studies, Heredia, Costa Rica
Research Interests: Pesticides, endocrine disruptors, children’s health, neurodevelopment, brain function

Shoji F. Nakayama, National Institute for Environmental Studies, Japan Environment and Children’s Study Programme Office, Tsukuba, Japan
Research Interests: Public health, Environmental health, Children’s environmental healthBiomonitoring, Exposome, Contaminants of emerging concern, Perfluoroalkyl substances (PFAS)

Julianne Nassif, Association of Public Health Laboratories, Silver Spring, Maryland, United States

Mark Nieuwenhuijsen, Centre for Research in Environmental Epidemiology, Barcelona, Spain
Research Interests: Environmental epidemiology; Environmental exposure assessment; Health impact assessment; Air pollution; Green space; Noise; Temperature; Built environment
Laura Palli, University of Florence, Firenze, Italy
Research Interests: Wastewater treatment, Micropollutants, Biodegradation

Sung Kyun Park, University of Michigan Department of Epidemiology, Ann Arbor, Michigan, United States
Research Interests: Environmental epidemiology, Heavy metals, Air pollution, Endocrine disrupting chemicals, PFAS

Marie Pedersen, University of Copenhagen Department of Public Health, Copenhagen, Denmark
Research Interests: Environmental epidemiology; Effects of environmental exposures early in life on human health; Air pollution and noise from road traffic; Dietary exposure to carcinogens; Biomarkers of genotoxic exposure and effect measured in maternal and umbilical cord blood; In utero and early growth (birth weight, rapid growth and child obesity); Preterm birth, preeclampsia, pregnancy-induced hypertension and gestational diabetes; Asthma and related respiratory and allergic outcomes in children; Cohort studies

Claire Philippat, Institute for Advanced Biosciences, La Tronche, France
Research Interests: Endocrine disruptors, Exposome, Early life exposure, Child health, biological pathways by which EDs can affect child health

Richard Pilsner, University of Massachusetts Amherst Department of Environmental Health Sciences, Amherst, Massachusetts, United States
Research Interests: Sperm epigenetics reproduction

Lesliam Quirós-Alcalá, Johns Hopkins University Department of Environmental Health and Engineering, Baltimore, Maryland, United States
Research Interests: Determinants of Chemical Exposure in Vulnerable Populations from Consumer Products, Children’s Exposures to Environmental Contaminants, Validation and Reliability of Biomarkers of Exposure, Pesticide exposures in children.

Jessica Reiner, Hollings Marine Laboratory, Charleston, South Carolina, United States
Research Interests: PFAS, analytical chemistry, chemicals of emerging concern, biomonitoring data

Megan Romano, Dartmouth Medical School Section of Biostatistics and Epidemiology, Lebanon, New Hampshire, United States

Joan Rose, Michigan State University Department of Fisheries and Wildlife, East Lansing, Michigan, United States

Ruthann Rudel, Silent Spring Institute, Newton, Massachusetts, United States
Research Interests: Chemical carcinogenesis, toxicology and risk assessment, personal exposure measurement and biomonitoring

Gurusankar Saravanabhavan, Health Canada, Ottawa, Ontario, Canada
Research Interests: Analytical and biochemical chemistry (methods development, validation and QA/QC) human biomonitoring environmental chemistry ,ul>human health risk assessment

Tamara Schikowski, Heinrich Heine University Düsseldorf, Dusseldorf, Germany
Research Interests: Air pollution, temperature, respiratory and cognitive diseases

Karen Setty, US Environmental Protection Agency Office of Research and Development, Duluth, Minnesota, United States
Research Interests: Water resources, sustainable development, risk management, mixed methods

Hyeong-Moo Shin, University of Texas at Arlington, Department of Earth and Environmental Sciences, Arlington, Texas, United States
Research Interests: Exposure and risk assessment, per- and polyfluoroalkyl substances, children’s health, fate and transport modeling

Don Simmons, The University of Iowa State Hygienic Laboratory, Iowa City, Iowa, United States
I am an analytical chemist and have concentrated my efforts in the areas of inorganic chemistry and toxicology. I have worked in the areas of environmental chemistry, newborn screening and biomonitoring. I have served as a technical manager for industrial hygiene and environmental lead testing. I have also spent many years performing environmental laboratory audits for EPA programs such as Safe Drinking water Act (SDWA), Clean Water Act (CWA), and Resource Conservation and Recovery Act (RCRA). I have also helped develop methods and accreditation for testing metals in food for food surveillance and food safety.

Kwanrawee Joy Sirikanchana, Chulabhorn Research Institute Laboratory of Biotechnology, Bangkok, Thailand

Adam Spanier, University of Maryland Department of Pediatrics, Baltimore, Maryland, United States

Cathrine Thomsen, Norwegian Institute of Public Health Division of Infection Control and Environmental Health, Oslo, Norway

Ellen Wells, Purdue University School of Health Sciences, West Lafayette, Indiana, United States

Charles Weschler, Environmental and Occupational Health Sciences Institute, Piscataway, New Jersey, United States
Research Interests: Indoor chemistry, gas-particle partitioning, indoor air quality, airborne particles.

Mary Wolff, Icahn School of Medicine at Mount Sinai, New York, New York, United States
Research Interests: Environmental exposures, analysis, methods

Shunqing Xu, Tongji Medical College, Wuhan, China
Sital Uprety, University of Illinois at Urbana-Champaign Department of Civil and Environmental Engineering, Urbana, Illinois, United States
Research Interest: Water, Sanitation and Hygiene (WaSH), WaSH in emergency settings, Environmental Microbiology, Virus Inactivation, Water treatment in low-income settings.

Editor Emeritus
Jürgen Angerer, Bochum, Germany
GUIDE FOR AUTHORS

INTRODUCTION
The International Journal of Hygiene and Environmental Health serves as a multidisciplinary forum for original reports on exposure assessment and the reactions to and consequences of human exposure to the biological, chemical, and physical environment. Research reports, short communications, reviews, scientific comments, technical notes, and editorials will be peer-reviewed before acceptance for publication. Priority will be given to articles on epidemiological aspects of environmental toxicology, health risk assessments, susceptible (sub) populations, sanitation and clean water, human biomonitoring, environmental medicine, and public health aspects of exposure-related outcomes.

Contact details for submission
For questions on the submission and reviewing process, please contact ijheh@elsevier.com. For technical questions, please use our help site at: https://service.elsevier.com/. Here you will be able to learn more about the online submission and editorial system via interactive tutorials, explore a range of problem solutions via our knowledgebase, and find answers to frequently asked questions. You will also find our support contact details should you need any assistance from one of our customer service representatives.

Page charges
This journal has no page charges.

Submission checklist
You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

Ensure that the following items are present:
One author has been designated as the corresponding author with contact details:
• E-mail address
• Full postal address
All necessary files have been uploaded:
Manuscript:
• Include keywords
• All figures (include relevant captions)
• All tables (including titles, description, footnotes)
• Ensure all figure and table citations in the text match the files provided
• Indicate clearly if color should be used for any figures in print
Graphical Abstracts / Highlights files (where applicable)
Supplemental files (where applicable)
Further considerations
• Manuscript has been 'spell checked' and 'grammar checked'
• All references mentioned in the Reference List are cited in the text, and vice versa
• Permission has been obtained for use of copyrighted material from other sources (including the Internet)
• A competing interests statement is provided, even if the authors have no competing interests to declare
• Journal policies detailed in this guide have been reviewed
• Referee suggestions and contact details provided, based on journal requirements

For further information, visit our Support Center.

BEFORE YOU BEGIN

Ethics in publishing
Please see our information pages on Ethics in publishing and Ethical guidelines for journal publication.

Studies in humans and animals
If the work involves the use of human subjects, the author should ensure that the work described has been carried out in accordance with The Code of Ethics of the World Medical Association (Declaration of Helsinki) for experiments involving humans. The manuscript should be in line with the
Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals and aim for the inclusion of representative human populations (sex, age and ethnicity) as per those recommendations. The terms sex and gender should be used correctly.

Authors should include a statement in the manuscript that informed consent was obtained for experimentation with human subjects. The privacy rights of human subjects must always be observed.

All animal experiments should comply with the ARRIVE guidelines and should be carried out in accordance with the U.K. Animals (Scientific Procedures) Act, 1986 and associated guidelines, EU Directive 2010/63/EU for animal experiments, or the National Institutes of Health guide for the care and use of Laboratory animals (NIH Publications No. 8023, revised 1978) and the authors should clearly indicate in the manuscript that such guidelines have been followed. The sex of animals must be indicated, and where appropriate, the influence (or association) of sex on the results of the study.

**Declaration of interest**

All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential competing interests include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. Authors must disclose any interests in two places: 1. A summary declaration of interest statement in the title page file (if double-blind) or the manuscript file (if single-blind). If there are no interests to declare then please state this: 'Declarations of interest: none'. This summary statement will be ultimately published if the article is accepted. 2. Detailed disclosures as part of a separate Declaration of Interest form, which forms part of the journal's official records. It is important for potential interests to be declared in both places and that the information matches. More information.

**Submission declaration and verification**

Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify originality, your article may be checked by the originality detection service Crossref Similarity Check.

**Preprints**

Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see 'Multiple, redundant or concurrent publication' for more information).

**Use of inclusive language**

Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns ("clinicians, patients/clients") as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

**Changes to authorship**

Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason
for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed. Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

**Article transfer service**

This journal is part of our Article Transfer Service. This means that if the Editor feels your article is more suitable in one of our other participating journals, then you may be asked to consider transferring the article to one of those. If you agree, your article will be transferred automatically on your behalf with no need to reformat. Please note that your article will be reviewed again by the new journal. 

**More information.**

**Copyright**

Upon acceptance of an article, authors will be asked to complete a 'Journal Publishing Agreement' (see more information on this). An e-mail will be sent to the corresponding author confirming receipt of the manuscript together with a 'Journal Publishing Agreement' form or a link to the online version of this agreement.

Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution and for all other derivative works, including compilations and translations. If excerpts from other copyrighted works are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has preprinted forms for use by authors in these cases.

For gold open access articles: Upon acceptance of an article, authors will be asked to complete an 'Exclusive License Agreement' (more information). Permitted third party reuse of gold open access articles is determined by the author's choice of user license.

**Author rights**

As an author you (or your employer or institution) have certain rights to reuse your work. More information.

**Elsevier supports responsible sharing**

Find out how you can share your research published in Elsevier journals.

**Role of the funding source**

You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement then this should be stated.

**Open access**

Please visit our Open Access page for more information.

**Language (usage and editing services)**

Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the English Language Editing service available from Elsevier's Author Services.

**Informed consent and patient details**

Studies on patients or volunteers require ethics committee approval and informed consent, which should be documented in the paper. Appropriate consents, permissions and releases must be obtained where an author wishes to include case details or other personal information or images of patients and any other individuals in an Elsevier publication. Written consents must be retained by the author but copies should not be provided to the journal. Only if specifically requested by the journal in exceptional circumstances (for example if a legal issue arises) the author must provide copies of the consents or evidence that such consents have been obtained. For more information, please review the Elsevier Policy on the Use of Images or Personal Information of Patients or other Individuals. Unless
you have written permission from the patient (or, where applicable, the next of kin), the personal
details of any patient included in any part of the article and in any supplementary materials (including
all illustrations and videos) must be removed before submission.

Submission
Our online submission system guides you stepwise through the process of entering your article details
and uploading your files. The system converts your article files to a single PDF file used in the
peer-review process. Please do not include line numbering in the manuscript. Editable files (e.g.,
Word, LaTeX) are required to typeset your article for final publication. All correspondence, including
notification of the Editor's decision and requests for revision, is sent by e-mail.

Submit your article
Please submit your article via https://www.evise.com/profile/api/navigate/IJHEH.

Referees
Please submit the names and institutional e-mail addresses of several potential referees. For more
details, visit our Support site. Note that the editor retains the sole right to decide whether or not the
suggested reviewers are used.

PREPARATION

Peer review
This journal operates a single blind review process. All contributions will be initially assessed by the
editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of
two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible
for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. More
information on types of peer review.

Use of word processing software
It is important that the file be saved in the native format of the word processor used. The text
should be in single-column format. Keep the layout of the text as simple as possible. Most formatting
codes will be removed and replaced on processing the article. In particular, do not use the word
processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts,
superscripts etc. When preparing tables, if you are using a table grid, use only one grid for each
individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns.
The electronic text should be prepared in a way very similar to that of conventional manuscripts (see
also the Guide to Publishing with Elsevier). Note that source files of figures, tables and text graphics
will be required whether or not you embed your figures in the text. See also the section on Electronic
artwork.
To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check'
functions of your word processor.

Article structure
Subdivision - unnumbered sections
Divide your article into clearly defined sections. Each subsection is given a brief heading. Each heading
should appear on its own separate line. Subsections should be used as much as possible when cross-
referencing text: refer to the subsection by heading as opposed to simply 'the text'.

Introduction
State the objectives of the work and provide an adequate background, avoiding a detailed literature
survey or a summary of the results.

Material and methods
Provide sufficient details to allow the work to be reproduced by an independent researcher. Methods
that are already published should be summarized, and indicated by a reference. If quoting directly
from a previously published method, use quotation marks and also cite the source. Any modifications
to existing methods should also be described.

Results
Results should be clear and concise.

Discussion
This should explore the significance of the results of the work, not repeat them. A combined Results
and Discussion section is often appropriate. Avoid extensive citations and discussion of published
literature.
Conclusions
The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.

Conflict of Interest
All authors are requested to disclose any actual or potential conflict of interest including any financial, personal or other relationships with other people or organizations within three years of beginning the submitted work that could inappropriately influence, or be perceived to influence, their work. See also https://www.elsevier.com/conflictsinterest.
And for further information, please view the following link: https://service.elsevier.com/app/answers/detail/a_id/286/supporthub/publishing.

Appendices
If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

Essential title page information
• Title. Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
• Author names and affiliations. Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. You can add your name between parentheses in your own script behind the English transliteration. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.
• Corresponding author. Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. This responsibility includes answering any future queries about Methodology and Materials. Ensure that the e-mail address is given and that contact details are kept up to date by the corresponding author.
• Present/permanent address. If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

Highlights
Highlights are highly encouraged for this journal, as they increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the examples here: example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

Abstract
A concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s). Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

Graphical abstract
Although a graphical abstract is optional, its use is encouraged as it draws more attention to the online article. The graphical abstract should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: Please provide an image with a minimum of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. You can view Example Graphical Abstracts on our information site.
Authors can make use of Elsevier’s Illustration Services to ensure the best presentation of their images and in accordance with all technical requirements.

**Keywords**
Immediately after the abstract, provide a maximum of 6 keywords, using American spelling and avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

**Abbreviations**
Define abbreviations that are not standard in this field in a footnote to be placed on the first page of the article. Such abbreviations that are unavoidable in the abstract must be defined at their first mention there, as well as in the footnote. Ensure consistency of abbreviations throughout the article.

**Acknowledgements**
Collate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

**Units**
Follow internationally accepted rules and conventions: use the international system of units (SI). If other units are mentioned, please give their equivalent in SI.

**Math formulae**
Please submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., X/Y. In principle, variables are to be presented in italics. Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).

**Footnotes**
Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors can build footnotes into the text, and this feature may be used. Otherwise, please indicate the position of footnotes in the text and list the footnotes themselves separately at the end of the article. Do not include footnotes in the Reference list.

**Artwork**
**Electronic artwork**
**General points**
- Make sure you use uniform lettering and sizing of your original artwork.
- Embed the used fonts if the application provides that option.
- Aim to use the following fonts in your illustrations: Arial, Courier, Times New Roman, Symbol, or use fonts that look similar.
- Number the illustrations according to their sequence in the text.
- Use a logical naming convention for your artwork files.
- Provide captions to illustrations separately.
- Size the illustrations close to the desired dimensions of the published version.
- Submit each illustration as a separate file.
- Ensure that color images are accessible to all, including those with impaired color vision.

A detailed guide on electronic artwork is available.

**You are urged to visit this site; some excerpts from the detailed information are given here.**

**Formats**
If your electronic artwork is created in a Microsoft Office application (Word, PowerPoint, Excel) then please supply 'as is' in the native document format.

Regardless of the application used other than Microsoft Office, when your electronic artwork is finalized, please ‘Save as’ or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):
- EPS (or PDF): Vector drawings, embed all used fonts.
- TIFF (or JPEG): Color or grayscale photographs (halftones), keep to a minimum of 300 dpi.
- TIFF (or JPEG): Bitmapped (pure black & white pixels) line drawings, keep to a minimum of 1000 dpi.
- TIFF (or JPEG): Combinations bitmapped line/halftone (color or grayscale), keep to a minimum of 500 dpi.
Please do not:
- Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); these typically have a low number of pixels and limited set of colors;
- Supply files that are too low in resolution;
- Submit graphics that are disproportionately large for the content.

Color artwork
Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF), or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these figures will appear in color online (e.g., ScienceDirect and other sites) regardless of whether or not these illustrations are reproduced in color in the printed version. **For color reproduction in print, you will receive information regarding the costs from Elsevier after receipt of your accepted article.** Please indicate your preference for color: in print or online only. Further information on the preparation of electronic artwork.

Illustration services
Elsevier's Author Services offers Illustration Services to authors preparing to submit a manuscript but concerned about the quality of the images accompanying their article. Elsevier's expert illustrators can produce scientific, technical and medical-style images, as well as a full range of charts, tables and graphs. Image 'polishing' is also available, where our illustrators take your image(s) and improve them to a professional standard. Please visit the website to find out more.

Figure captions
Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (**not** on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

Tables
Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

References
Citation in text
Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.

Reference links
Increased discoverability of research and high quality peer review are ensured by online links to the sources cited. In order to allow us to create links to abstracting and indexing services, such as Scopus, CrossRef and PubMed, please ensure that data provided in the references are correct. Please note that incorrect surnames, journal/book titles, publication year and pagination may prevent link creation. When copying references, please be careful as they may already contain errors. Use of the DOI is highly encouraged.

A DOI is guaranteed never to change, so you can use it as a permanent link to any electronic article. An example of a citation using DOI for an article not yet in an issue is: VanDecar J.C., Russo R.M., James D.E., Ambeh W.B., Franke M. (2003). Aseismic continuation of the Lesser Antilles slab beneath northeastern Venezuela. Journal of Geophysical Research, https://doi.org/10.1029/2001JB000884. Please note the format of such citations should be in the same style as all other references in the paper.

Web references
As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.
Data references
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

References in a special issue
Please ensure that the words 'this issue' are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

Reference management software
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal's style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.

Users of Mendeley Desktop can easily install the reference style for this journal by clicking the following link:
When preparing your manuscript, you will then be able to select this style using the Mendeley plug-ins for Microsoft Word or LibreOffice.

Reference Style
Text: All citations in the text should refer to:

1. Single author: the author's name (without initials, unless there is ambiguity) and the year of publication;

2. Two authors: both authors' names and the year of publication;

3. Three or more authors: first author's name followed by 'et al.' and the year of publication.

Citations may be made directly (or parenthetically). Groups of references should be listed first alphabetically, then chronologically.
Examples: 'as demonstrated (Allan, 2000a, 2000b, 1999; Allan and Jones, 1999). Kramer et al. (2010) have recently shown ....'

List: References should be arranged first alphabetically and then further sorted chronologically if necessary. More than one reference from the same author(s) in the same year must be identified by the letters 'a', 'b', 'c', etc., placed after the year of publication.

Examples:
Reference to a journal publication:

Reference to a book:

Reference to a chapter in an edited book:

Reference to a website:

Reference to a dataset:

Journal abbreviations source
Journal names should be abbreviated according to the List of Title Word Abbreviations.

Video
Elsevier accepts video material and animation sequences to support and enhance your scientific research. Authors who have video or animation files that they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table by referring to the video or animation content and noting in the body text where it should be placed. All submitted files should be properly labeled so that they directly relate to the video file's content. In order to ensure that your video or animation material is directly usable, please provide the file in one of our recommended file formats with a preferred maximum size of 150 MB per file, 1 GB in total. Video and animation files supplied will be published online in the electronic version of your article in Elsevier Web products, including ScienceDirect. Please supply 'stills' with your files: you can choose any frame from the video or animation or make a separate image. These will be used instead of standard icons and will personalize the link to your video data. For more detailed instructions please visit our video instruction pages. Note: since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and the print version for the portions of the article that refer to this content.

Supplementary material
Supplementary material such as applications, images and sound clips, can be published with your article to enhance it. Submitted supplementary items are published exactly as they are received (Excel or PowerPoint files will appear as such online). Please submit your material together with the article and supply a concise, descriptive caption for each supplementary file. If you wish to make changes to supplementary material during any stage of the process, please make sure to provide an updated file. Do not annotate any corrections on a previous version. Please switch off the 'Track Changes' option in Microsoft Office files as these will appear in the published version.

Research data
This journal encourages and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings. To facilitate reproducibility and data reuse, this journal also encourages you to share your software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. If you are sharing data in one of these ways, you are encouraged to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

Data linking
If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.

For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.
In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

**Mendeley Data**
This journal supports Mendeley Data, enabling you to deposit any research data (including raw and processed data, video, code, software, algorithms, protocols, and methods) associated with your manuscript in a free-to-use, open access repository. During the submission process, after uploading your manuscript, you will have the opportunity to upload your relevant datasets directly to Mendeley Data. The datasets will be listed and directly accessible to readers next to your published article online.

For more information, visit the Mendeley Data for journals page.

**Data statement**
To foster transparency, we encourage you to state the availability of your data in your submission. This may be a requirement of your funding body or institution. If your data is unavailable to access or unsuitable to post, you will have the opportunity to indicate why during the submission process, for example by stating that the research data is confidential. The statement will appear with your published article on ScienceDirect. For more information, visit the Data Statement page.

**AFTER ACCEPTANCE**

**Online proof correction**
To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Corresponding authors will receive an e-mail with a link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors.

If preferred, you can still choose to annotate and upload your edits on the PDF version. All instructions for proofing will be given in the e-mail we send to authors, including alternative methods to the online version and PDF.

We will do everything possible to get your article published quickly and accurately. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. It is important to ensure that all corrections are sent back to us in one communication. Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

**Offprints**
The corresponding author will, at no cost, receive a customized Share Link providing 50 days free access to the final published version of the article on ScienceDirect. The Share Link can be used for sharing the article via any communication channel, including email and social media. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Both corresponding and co-authors may order offprints at any time via Elsevier's Author Services. Corresponding authors who have published their article gold open access do not receive a Share Link as their final published version of the article is available open access on ScienceDirect and can be shared through the article DOI link.

**AUTHOR INQUIRIES**
Visit the Elsevier Support Center to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch.
You can also check the status of your submitted article or find out when your accepted article will be published.
