DESCRIPTION

The *Journal of Environmental Management* is a peer reviewed journal for the publication of original research related to managing environmental systems and improving environmental quality. All papers submitted to the journal must show a *distinctive link* with environmental management applications. Specific area of interest for the journal include:

- Development of technologies intended for applications to environmental ecosystems (water, air, soil)
- Natural resource management
- Ecological applications or conservation
- Management and valorisation of waste (including industrial residues and effluents)
- Development of methods for environmental quality management (new procedures, characterization techniques, monitoring methods, governing standards, etc.)
- Environmental system modelling and optimization
- Environmental analysis and assessment (environmental impact assessment, risk assessment, life cycle analysis, material flow analysis, life cycle costing, emission accounting, etc.)
- Social, economic and policy aspects of environmental management

Case studies are welcome when the authors indicate the wider *applications* of their insights or techniques, emphasizing the global perspective of the problem they address.

As governments and the general public become more keenly aware of the critical issues arising from how humans use their environment, this journal provides a forum for the discussion of *environmental problems* around the world and for the presentation of management results. It is aimed not only at the environmental manager, but at anyone concerned with the *sustainable* use of *environmental resources*.

The journal does not accept manuscripts exclusively focused on any of the following aspects:

- Simulations/modelling when predominantly oriented to mathematical issues
- Reactions/process studies when predominantly oriented to chemistry issues without an environmental viewpoint
- Products/waste recycling research when broad environmental management aspects are not properly accounted
- Materials synthesis without clear environmental management applications
Authors will be asked to provide a **novelty and relevance statement** indicating how the results are deemed to be original with respect to the state-of-the-art in the field, relevant and essential to the advance of knowledge on environmental management and applicable to a wider audience and wider contexts.

*Journal of Environmental Management* is the companion title to the open access journal *Environmental Challenges*.

We encourage those interested in organizing a special issue or a virtual special issue within the scope of the journal to fill out this [form](http://www.elsevier.com/locate/jenvman) and contact Prof. Alexey Voinov for more information.

**EDITORIAL BOARD**

**Co-Editors-in-Chief**
- **Raf Dewil**, KU Leuven Science and Technology Group, Department of Chemical Engineering, Heverlee, Belgium
- **Jason Evans**, Stetson University, Deland, Florida, United States of America
- **Lixiao Zhang**, Beijing Normal University, Beijing, China
- Renewable energy, Food-energy-water nexus, Urban metabolism, System dynamic modeling, Life cycle assessment, Input-output analysis

**Managing Editors**
- **Janardan Mainali**, Stetson University, Deland, Florida, United States of America
- **Mingyue Pang**, Chongqing University, Chongqing, China
- Renewable energy, Life cycle assessment, Ecosystem services, Food waste

**Associate Editors**
- **Sultan Al-Salem**, Kuwait Institute for Scientific Research, Safat, Kuwait
- **Yuan Chang**, Central University of Finance and Economics, Beijing, China
- Industrial Ecology, Sustainable Building and Infrastructure Systems, Environmental Policy Management, Economic-Environmental-Social Assessment
- **Juan Chen**, Hohai University, Nanjing, China
- Water resource protection, Watershed ecological management, Eco-hydrodynamics, Ecological effect and bioremediation of emerging pollutants, Biogeochemical cycling of aquatic ecosystems
- **Zhiyuan Cong**, Chinese Academy of Sciences, Beijing, China

AUTHOR INFORMATION PACK 13 Jul 2023  www.elsevier.com/locate/jenvman
Atmospheric Environment and Chemistry, especially the issues related to the Atmospheric Aerosols

Petros Gikas, Technical University of Crete School of Chemical and Environmental Engineering, Chania, Greece
Wastewater treatment, Water treatment, Water reuse, Water resources management, Biosolids management, Waste to energy, Gasification, Landfill gas

Jinkyu Hong, Yonsei University, Seodaemun-gu, South Korea
Urban climate, Forest-atmosphere interaction, Energy-climate interaction, Regional climate, Planetary boundary layer, Air pollution

Peter Hooda, Kingston University, London, United Kingdom
Soil Science, Soil use and management, soil fertility, soil organic carbon management, soil contamination & remediation, degraded land restoration

Xiaowu Huang, Guangdong Technion-Israel Institute of Technology, Shantou, China
Sustainable organic solid waste management, Wastewater treatment and resource recovery, Biowaste recycling, Biomass valorization, Microbial nitrogen cycle

Apostolos Kyriazopoulos, Democritus University of Thrace, Department of Forestry and Management of the Environment and Natural Resources, Orestiada, Greece
Rangeland ecology and management, Grazing management, Agroforestry systems, Rangeland restoration, Biodiversity, Ecosystem services

Willem de Lange, Council for Scientific and Industrial Research, Pretoria, South Africa

Yiwen Liu, Tianjin University, Tianjin, China
Greenhouse gases emission and mitigation from wastewater systems, Sewer processes, Anaerobic digestion, Sludge fermentation, Biological nutrients removal and recovery, Mathematical modelling

Giorgios Mallinis, Aristotle University of Thessaloniki, Thessaloniki, Greece
Remote Sensing, Geographic Information Systems, Forestry, Wildfires, Ecosystem Services

Muhammad Ali Nasir, Leeds University Business School, Leeds, United Kingdom

Bing-Jie B. Ni, University of Technology Sydney School of Civil and Environmental Engineering, Broadway, New South Wales, Australia
Biological Wastewater Treatment, Aerobic Granular Sludge, Microbial Treatment, Biological Nutrient Removal, Anaerobic Digestion, Energy From Waste, Greenhouse Gas Emissions, Hazardous Waste Management, Sludge Treatment, Photochemical Treatment, Environmental Microbiology, Wastewater Treatment, Sludge Treatment, Sustainable waste water management

Avelino Núñez-Delgado, University of Santiago de Compostela, Santiago de Compostela, Spain
Environment, Soil pollution, Water pollution, Soil and water treatment

Irene Petrosillo, University of Salento, Lecce, Italy
Adaptive Management, Socio-ecological Systems/Landscapes, Sustainable Tourism, Landscape Ecology, Ecosystem/Landscape Services, Perception/Attitude, GIS, Remote Sensing, Environmental Management Systems, Biodiversity, Natural Protected Areas (Marine and Terrestrial), Climate Change, Land-use/Land Cover Change, Green Areas, Co-planning and Decision-making Process

Yolanda Picó, University of Valencia, Valencia, Spain
Environmental Microbiology, Waste water treatment, Water quality, removal of micro-pollutants from water, Formation and control of disinfection by-products (DBP) in water, Removal and control of contaminants of emerging concern (CEC) in water and wastewaters systems, Wastewater treatment and reuse, Monitoring and modeling trace contaminants in water by spectroscopy, soil and aquifer remediation, Water quality management in precision farming, Waste valorization, Human exposure to airborne contaminants

David ROUBAUD, Montpellier Business School, Montpellier, France
Energy Economics, Bitcoin, Cryptocurrencies, Green Supply Chain, Decision Science, Finance, Big Data

Paolo Roccaro, University of Catania, Catania, Italy
Water quality, removal of micro-pollutants from water, Formation and control of disinfection by-products (DBP) in water, Removal and control of contaminants of emerging concern (CEC) in water and wastewaters systems, Wastewater treatment and reuse, Monitoring and modeling trace contaminants in water by spectroscopy, soil and aquifer remediation, Water quality management in precision farming, Waste valorization, Human exposure to airborne contaminants

Qian Tan, Guangdong University of Technology, Guangzhou, China
Water and environmental systems planning and management, integrated watershed management, food-energy-water nexus, nonpoint source pollution control, risk assessment and control, systems analysis, uncertainty analysis

**Berrin Tansel**, Florida International University, Miami, Florida, United States of America
Sustainability, Water treatment, Hazardous waste management, Coastal environment

**Toan Trinh**, University of California Davis, Davis, California, United States of America
Water resources engineering, Regional climate modeling, Hydro-climate modeling, Land surface processes, Physically based Watershed modeling, hydrological processes, Probable maximum precipitation, probable maximum flood, Hydro-climate forecasting system and Geographic information system (GIS) applications.

**Dan Tsang**, The Hong Kong Polytechnic University, Department of Civil and Environmental Engineering, Hong Kong, Hong Kong

**Ruonan Wu**, Pacific Northwest National Laboratory, Richland, Washington, United States of America
Soil microbiome, Soil viruses, Viral ecology, Environmental microbiology, Bioinformatics

**Hua Zheng**, Research Centre for Eco-Environmental Sciences Chinese Academy of Sciences, Beijing, China
Ecosystem services, land use change, ecological restoration, socio-ecological system

**Special Content Editor**

**Alexey Voinov**, University of Twente, Faculty of Engineering Technology, Enschede, Netherlands

**Editorial Board**

**Tejraj (Bhavi) Aminabhavi**, KLE Technological University, Hubli, India
Sustainable environmental membrane separation processes, Emerging pollutant separation and solid waste mitigation, MBR and forward osmosis for biowaste mitigation, Effluent or influent wastewater treatment by electro-coagulation, Toxic metal separation and recovery, Desulfurization, Acid/flue gas separation

**Krister Andersson**, University of Colorado Boulder, Boulder, Colorado, United States of America
Latin America, forests, governance, institutions, politics

**Manuel Arias-Estévez**, University of Vigo, Vigo, Spain
Antibiotics and heavy metals in the environment.

**Jon Calabria**, University of Georgia, Athens, Georgia, United States of America
Works closely with environmental managers on applied design and research projects - especially in watershed and stormwater management

**Bin Chen**, Beijing Normal University, Beijing, China
Environmental Science, Energy Sustainability, Energy NEXUS, Environmental management, Climate change, Urban sustainability

**Xueming Chen**, Fuzhou University, Fuzhou, China
Biological Wastewater Treatment, Biofilm Reactors, Granular Sludge, Greenhouse Gas Emissions, Modeling, Sustainable wastewater management

**Matt Dicken**, South Africa

**Xin Dong**, Tsinghua University, Beijing, China
Urban Drainage, Integrated Modeling, Real-Time Control, Infrastructure Resilience

**Ali Ebrahimian**, Florida International University, Miami, Florida, United States of America
Urban hydrology, Green infrastructure, Stormwater management, Multi-criteria decision analysis, Equitable infrastructure planning

**David Fernández-Calviño**, University of Vigo, Vigo, Spain
Antibiotics and heavy metals in the environment

**Jianfeng Guo**, Chinese Academy of Sciences Institutes of Science and Development, Beijing, China
Energy and environmental policy, Big data analysis, Technology foresight, Decision Support System, Knowledge Management

**Keiichiro Kanemoto**, Research Institute for Humanity and Nature, Kyoto, Japan
Industrial Ecology, Environmental Economics, Input-Output

**Justin Chun-Ten Lin**, Feng Chia University, Taichung, Taiwan
Membrane, Microplastics, Nanobubble, Biodegradation, Water-Energy-Resource Nexus, Water treatment, Sustainable metrics

**Xi Lu**, Tsinghua University School of Environment, Beijing, China
Environmental Science, Energy, Climate and Environmental Complex System Modeling, Integrative assessment framework on renewable energy, Low-carbon development and its co-benefit to air
pollution control, Big data analysis of energy storage and variable renewable sources, Emissions inventory on greenhouse gases and air pollutants, Energy system for green, Low-carbon and smart cities

**Arjun Maity**, Council for Scientific and Industrial Research Natural Resources and the Environment, Pretoria, South Africa

**Navid R. Moheimani**, Murdoch University, Murdoch, Australia

**Ian Oliver**, Keele University, Staffordshire, United Kingdom

Environmental behaviour and impacts of contaminants in aquatic and terrestrial systems, Aquatic and terrestrial ecotoxicology, and Novel amendments for soil remediation and assessment of their influence on soil function

**Edward Park**, Nanyang Technological University, Singapore, Singapore

Fluvial Geomorphology, Watershed hydrology, Sediment transport, Human impacts, Remote sensing, Southeast Asia

**Wei Peng**, The Pennsylvania State University, University Park, Pennsylvania, United States of America

Climate policy, Energy policy, Air pollution and health, Integrated assessment modeling, Air quality modeling

**David Schaad**, Duke University, Durham, North Carolina, United States of America

Sustainable engineering, Community development, Water and wastewater treatment design, Stormwater retention/detention and treatment design, Hazardous waste remediation, Urban hydrology, Constructed wetland and stream restoration design, Ecological stabilization, Sustainable engineering in land development, Water resources, Water and wastewater treatment

**Jinxi Song**, Northwest University, Xian, China

Ecohydrology and river health, Water environmental impact and risk assessment, Social, economic and policy aspects of environmental management, Water environmental quality management, Natural resource management

**Ian Vázquez-Rowe**, Pontifical Catholic University of Peru, Lima, Peru

Industrial ecology, Life Cycle Assessment, Environmental management, Carbon Footprint, Fisheries and seafood, Marine litter, Waste management

**Jinnan Wang**, Chinese Academy for Environmental Planning, Chaoyang District, China

Environmental planning, Environmental policy, National green GDP accounting, Gross ecosystem product, Gross economic ecological production

**Shuxiao Wang**, Tsinghua University School of Environment, Beijing, China

**Qi Ying**, Texas A&M University, College Station, Texas, United States of America

urban and regional scale air quality modeling, source apportionment, exposure assessment, secondary organic aerosol

**Bing Zhang**, Nanjing University, Nanjing, China

Environmental management and policy analysis, Environmental economics
GUIDE FOR AUTHORS

INTRODUCTION
Aims and Scope:

The Journal of Environmental Management is a journal for the publication of peer reviewed, original research for all aspects of management and the managed use of the environment, both natural and man-made. Critical review articles are also welcome; submission of these is strongly encouraged.

As governments and the general public become more keenly aware of the critical issues arising from man's use of his environment, this journal provides a forum for the discussion of environmental problems around the world and for the presentation of management results. It is aimed not only at the environmental manager, but at anyone concerned with the sustainable use of environmental resources.

Research Areas Include, but are not exclusive to: •resource quality, quantity and sustainability •economics of environmental management •transport and fate of pollutants in the environment •spill prevention and management •remediation of contaminated sites •process modification for pollution prevention •improved energy efficiency •waste treatment and disposal

Papers submitted should address environmental management issues using a range of techniques e.g. case studies, observational and theoretical analyses, the application of science, engineering and technology to questions of environmental concern or mathematical and computer modeling techniques with the aim of informing both the researcher and practitioner.

Contact details for submission
Special Issues: If you are submitting a manuscript for publication in a special issue, please contact the Editor or Guest Editor for submission instructions. Please do not submit it through the online Editorial Manager unless you are specifically instructed to do so.

Submission checklist
Click here to view the author checklist.

You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

Ensure that the following items are present:

One author has been designated as the corresponding author with contact details:
• E-mail address
• Full postal address

All necessary files have been uploaded:
Manuscript:
• Include keywords
• All figures (include relevant captions)
• All tables (including titles, description, footnotes)
• Ensure all figure and table citations in the text match the files provided
• Indicate clearly if color should be used for any figures in print
Graphical Abstracts / Highlights files (where applicable)
Supplemental files (where applicable)

Further considerations
• Manuscript has been 'spell checked' and 'grammar checked'
• All references mentioned in the Reference List are cited in the text, and vice versa
• Permission has been obtained for use of copyrighted material from other sources (including the Internet)
• A competing interests statement is provided, even if the authors have no competing interests to declare
• Journal policies detailed in this guide have been reviewed
• Referee suggestions and contact details provided, based on journal requirements

For further information, visit our Support Center.

BEFORE YOU BEGIN

Ethics in publishing
Please see our information on Ethics in publishing.

Declaration of competing interest
Corresponding authors, on behalf of all the authors of a submission, must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. All authors, including those without competing interests to declare, should provide the relevant information to the corresponding author (which, where relevant, may specify they have nothing to declare). Corresponding authors should then use this tool to create a shared statement and upload to the submission system at the Attach Files step. Please do not convert the .docx template to another file type. Author signatures are not required.

Declaration of generative AI in scientific writing
The below guidance only refers to the writing process, and not to the use of AI tools to analyse and draw insights from data as part of the research process.

Where authors use generative artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should only use these technologies to improve readability and language. Applying the technology should be done with human oversight and control, and authors should carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or biased. AI and AI-assisted technologies should not be listed as an author or co-author, or be cited as an author. Authorship implies responsibilities and tasks that can only be attributed to and performed by humans, as outlined in Elsevier’s AI policy for authors.

Authors should disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

Disclosure instructions
Authors must disclose the use of generative AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in the core manuscript file, before the References list. The statement should be placed in a new section entitled ‘Declaration of Generative AI and AI-assisted technologies in the writing process’.

Statement: During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.

This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, there is no need to add a statement.

Submission declaration and verification
Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see ‘Multiple, redundant or concurrent publication’ for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify compliance, your article may be checked by Crossref Similarity Check and other originality or duplicate checking software.
Preprints
Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see 'Multiple, redundant or concurrent publication' for more information).

Preprint posting on SSRN
In support of Open Science, this journal offers its authors a free preprint posting service. Preprints provide early registration and dissemination of your research, which facilitates early citations and collaboration.

During submission to Editorial Manager, you can choose to release your manuscript publicly as a preprint on the preprint server SSRN once it enters peer-review with the journal. Your choice will have no effect on the editorial process or outcome with the journal. Please note that the corresponding author is expected to seek approval from all co-authors before agreeing to release the manuscript publicly on SSRN.

You will be notified via email when your preprint is posted online and a Digital Object Identifier (DOI) is assigned. Your preprint will remain globally available free to read whether the journal accepts or rejects your manuscript.

For more information about posting to SSRN, please consult the SSRN Terms of Use and FAQs.

Use of inclusive language
Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns ("clinicians, patients/clients") as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. When coding terminology is used, we recommend to avoid offensive or exclusionary terms such as "master", "slave", "blacklist" and "whitelist". We suggest using alternatives that are more appropriate and (self-) explanatory such as "primary", "secondary", "blocklist" and "allowlist". These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

Reporting sex- and gender-based analyses
Reporting guidance
For research involving or pertaining to humans, animals or eukaryotic cells, investigators should integrate sex and gender-based analyses (SGBA) into their research design according to funder/sponsor requirements and best practices within a field. Authors should address the sex and/or gender dimensions of their research in their article. In cases where they cannot, they should discuss this as a limitation to their research's generalizability. Importantly, authors should explicitly state what definitions of sex and/or gender they are applying to enhance the precision, rigor and reproducibility of their research and to avoid ambiguity or conflation of terms and the constructs to which they refer (see Definitions section below). Authors can refer to the Sex and Gender Equity in Research (SAGER) guidelines and the SAGER guidelines checklist. These offer systematic approaches to the use and editorial review of sex and gender information in study design, data analysis, outcome reporting and research interpretation - however, please note there is no single, universally agreed-upon set of guidelines for defining sex and gender.

Definitions
Sex generally refers to a set of biological attributes that are associated with physical and physiological features (e.g., chromosomal genotype, hormonal levels, internal and external anatomy). A binary sex categorization (male/female) is usually designated at birth ("sex assigned at birth"), most often based solely on the visible external anatomy of a newborn. Gender generally refers to socially constructed roles, behaviors, and identities of women, men and gender-diverse people that occur in a historical and cultural context and may vary across societies and over time. Gender influences how people view themselves and each other, how they behave and interact and how power is distributed in society. Sex
and gender are often incorrectly portrayed as binary (female/male or woman/man) and unchanging whereas these constructs actually exist along a spectrum and include additional sex categorizations and gender identities such as people who are intersex/have differences of sex development (DSD) or identify as non-binary. Moreover, the terms "sex" and "gender" can be ambiguous—thus it is important for authors to define the manner in which they are used. In addition to this definition guidance and the SAGER guidelines, the resources on this page offer further insight around sex and gender in research studies.

Author contributions
For transparency, we require corresponding authors to provide co-author contributions to the manuscript using the relevant CRedit roles. The CRedit taxonomy includes 14 different roles describing each contributor’s specific contribution to the scholarly output. The roles are: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; and Writing - review & editing. Note that not all roles may apply to every manuscript, and authors may have contributed through multiple roles. More details and an example.

Changes to authorship
Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed. Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

Article transfer service
This journal uses the Elsevier Article Transfer Service to find the best home for your manuscript. This means that if an editor feels your manuscript is more suitable for an alternative journal, you might be asked to consider transferring the manuscript to such a journal. The recommendation might be provided by a Journal Editor, a dedicated Scientific Managing Editor, a tool assisted recommendation, or a combination. If you agree, your manuscript will be transferred, though you will have the opportunity to make changes to the manuscript before the submission is complete. Please note that your manuscript will be independently reviewed by the new journal. More information.

Copyright
Upon acceptance of an article, authors will be asked to complete a 'Journal Publishing Agreement' (see more information on this). An e-mail will be sent to the corresponding author confirming receipt of the manuscript together with a 'Journal Publishing Agreement' form or a link to the online version of this agreement.

Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution and for all other derivative works, including compilations and translations. If excerpts from other copyrighted works are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has preprinted forms for use by authors in these cases.

For gold open access articles: Upon acceptance of an article, authors will be asked to complete a 'License Agreement' (more information). Permitted third party reuse of gold open access articles is determined by the author’s choice of user license.

Author rights
As an author you (or your employer or institution) have certain rights to reuse your work. More information.

Elsevier supports responsible sharing
Find out how you can share your research published in Elsevier journals.
**Role of the funding source**
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement, it is recommended to state this.

**Open access**
Please visit our Open Access page for more information.

*Elsevier Researcher Academy*
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

**Language (usage and editing services)**
Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the English Language Editing service available from Elsevier's Author Services.

**Submission**
Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor’s decision and requests for revision, is sent by e-mail.

**Referees**
Please submit, with the manuscript, the names and addresses of at least two potential referees.

**PREPARATION**

**Queries**
For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

**Peer review**
This journal operates a single anonymized review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal's usual procedures, with peer review handled independently of the relevant editor and their research groups. More information on types of peer review.

When submitting the revised manuscript, please make sure that you upload the final version of the paper. Please remove the old version(s) of the manuscript before submitting the revised version.

**LaTeX**
You are recommended to use the latest Elsevier article class to prepare your manuscript and BibTeX to generate your bibliography. Our Guidelines has full details.

**Article structure**

Subdivision - numbered sections
Divide your article into clearly defined and numbered sections. Subsections should be numbered 1.1 (then 1.1.1, 1.1.2, ...), 1.2, etc. (the abstract is not included in section numbering). Use this numbering also for internal cross-referencing: do not just refer to ‘the text’. Any subsection may be given a brief heading. Each heading should appear on its own separate line.
Introduction
State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results.

Material and methods
Provide sufficient details to allow the work to be reproduced by an independent researcher. Methods that are already published should be summarized, and indicated by a reference. If quoting directly from a previously published method, use quotation marks and also cite the source. Any modifications to existing methods should also be described.

Results
Results should be clear and concise.

Discussion
This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.

Conclusions
The main conclusions of the study must be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.

Essential title page information

• Title. Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
• Author names and affiliations. Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. You can add your name between parentheses in your own script behind the English transliteration. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.
• Corresponding author. Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. This responsibility includes answering any future queries about Methodology and Materials. Ensure that the e-mail address is given and that contact details are kept up to date by the corresponding author.
• Present/permanent address. If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

Highlights
Highlights are mandatory for this journal as they help increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the examples here: example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

Abstract
A concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s). Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

Graphical abstract
Although a graphical abstract is optional, its use is encouraged as it draws more attention to the online article. The graphical abstract should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: Please provide an image with a minimum
of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. You can view Example Graphical Abstracts on our information site.

**Keywords**
Immediately after the abstract, provide a maximum of 6 keywords, using American spelling and avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

**Acknowledgements**
Collate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

**Formatting of funding sources**
List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, it is recommended to include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

**Math formulae**
Please submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., X/Y. In principle, variables are to be presented in italics. Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).

**Footnotes**
Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors build footnotes into the text, and this feature may be used. Should this not be the case, indicate the position of footnotes in the text and present the footnotes themselves separately at the end of the article.

**Artwork**

**Electronic artwork**
**General points**
- Make sure you use uniform lettering and sizing of your original artwork.
- Preferred fonts: Arial (or Helvetica), Times New Roman (or Times), Symbol, Courier.
- Number the illustrations according to their sequence in the text.
- Use a logical naming convention for your artwork files.
- Indicate per figure if it is a single, 1.5 or 2-column fitting image.
- For Word submissions only, you may still provide figures and their captions, and tables within a single file at the revision stage.
- Please note that individual figure files larger than 10 MB must be provided in separate source files.

A detailed [guide on electronic artwork](#) is available.

**You are urged to visit this site; some excerpts from the detailed information are given here.**

**Formats**
Regardless of the application used, when your electronic artwork is finalized, please 'save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):
EPS (or PDF): Vector drawings. Embed the font or save the text as 'graphics'.
TIFF (or JPG): Color or grayscale photographs (halftones): always use a minimum of 300 dpi.
TIFF (or JPG): Bitmapped line drawings: use a minimum of 1000 dpi.
TIFF (or JPG): Combinations bitmapped line/half-tone (color or grayscale): a minimum of 500 dpi is required.

Please do not:
- Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); the resolution is too low.
- Supply files that are too low in resolution.
- Submit graphics that are disproportionately large for the content.

Color artwork
Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF) or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these figures will appear in color online (e.g., ScienceDirect and other sites). Further information on the preparation of electronic artwork.

Figure captions
Ensure that each illustration has a caption. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

Tables
Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

References
Citation in text
Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.

Reference links
Increased discoverability of research and high quality peer review are ensured by online links to the sources cited. In order to allow us to create links to abstracting and indexing services, such as Scopus, Crossref and PubMed, please ensure that data provided in the references are correct. Please note that incorrect surnames, journal/book titles, publication year and pagination may prevent link creation. When copying references, please be careful as they may already contain errors. Use of the DOI is highly encouraged.

A DOI is guaranteed never to change, so you can use it as a permanent link to any electronic article. An example of a citation using DOI for an article not yet in an issue is: VanDecar J.C., Russo R.M., James D.E., Ambeh W.B., Franke M. (2003). Aseismic continuation of the Lesser Antilles slab beneath northeastern Venezuela. Journal of Geophysical Research, https://doi.org/10.1029/2001JB000884. Please note the format of such citations should be in the same style as all other references in the paper.

Web references
As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.
Data references
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

Preprint references
Where a preprint has subsequently become available as a peer-reviewed publication, the formal publication should be used as the reference. If there are preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published, these may be referenced. Preprints should be clearly marked as such, for example by including the word preprint, or the name of the preprint server, as part of the reference. The preprint DOI should also be provided.

References in a special issue
Please ensure that the words 'this issue' are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

Reference management software
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal's style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.

Reference formatting
There are no strict requirements on reference formatting at submission. References can be in any style or format as long as the style is consistent. Where applicable, author(s) name(s), journal title/book title, chapter title/article title, year of publication, volume number/book chapter and the article number or pagination must be present. Use of DOI is highly encouraged. The reference style used by the journal will be applied to the accepted article by Elsevier at the proof stage. Note that missing data will be highlighted at proof stage for the author to correct. If you do wish to format the references yourself they should be arranged according to the following examples:

Reference style
Text: All citations in the text should refer to:
1. **Single author:** the author's name (without initials, unless there is ambiguity) and the year of publication;
2. **Two authors:** both authors' names and the year of publication;
3. **Three or more authors:** first author's name followed by 'et al.' and the year of publication.
Citations may be made directly (or parenthetically). Groups of references can be listed either first alphabetically, then chronologically, or vice versa.
Examples: 'as demonstrated (Allan, 2000a, 2000b, 1999; Allan and Jones, 1999).... Or, as demonstrated (Jones, 1999; Allan, 2000).... Kramer et al. (2010) have recently shown ...'
List: References should be arranged first alphabetically and then further sorted chronologically if necessary. More than one reference from the same author(s) in the same year must be identified by the letters 'a', 'b', 'c', etc., placed after the year of publication.
Examples:
Reference to a journal publication:
Reference to a journal publication with an article number:
Reference to a book:
Reference to a chapter in an edited book:
Reference to a website:

Reference to a dataset:

Reference to software:

Video
Elsevier accepts video material and animation sequences to support and enhance your scientific research. Authors who have video or animation files that they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table by referring to the video or animation content and noting in the body text where it should be placed. All submitted files should be properly labeled so that they directly relate to the video file's content. In order to ensure that your video or animation material is directly usable, please provide the file in one of our recommended file formats with a preferred maximum size of 150 MB per file, 1 GB in total. Video and animation files supplied will be published online in the electronic version of your article in Elsevier Web products, including ScienceDirect. Please supply 'stills' with your files: you can choose any frame from the video or animation or make a separate image. These will be used instead of standard icons and will personalize the link to your video data. For more detailed instructions please visit our video instruction pages. Note: since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and the print version for the portions of the article that refer to this content.

Data visualization
Include interactive data visualizations in your publication and let your readers interact and engage more closely with your research. Follow the instructions here to find out about available data visualization options and how to include them with your article.

Supplementary material
Supplementary material such as applications, images and sound clips, can be published with your article to enhance it. Submitted supplementary items are published exactly as they are received (Excel or PowerPoint files will appear as such online). Please submit your material together with the article and supply a concise, descriptive caption for each supplementary file. If you wish to make changes to supplementary material during any stage of the process, please make sure to provide an updated file. Do not annotate any corrections on a previous version. Please switch off the 'Track Changes' option in Microsoft Office files as these will appear in the published version.

Research data
This journal requires and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings, which may also include software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. When sharing data in one of these ways, you are expected to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

Data linking
If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.
There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.

For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.

In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

**Research Elements**

This journal enables you to publish research objects related to your original research – such as data, methods, protocols, software and hardware – as an additional paper in a Research Elements journal.

Research Elements is a suite of peer-reviewed, open access journals which make your research objects findable, accessible and reusable. Articles place research objects into context by providing detailed descriptions of objects and their application, and linking to the associated original research articles. Research Elements articles can be prepared by you, or by one of your collaborators.

During submission, you will be alerted to the opportunity to prepare and submit a manuscript to one of the Research Elements journals.

More information can be found on the Research Elements page.

**Data statement**

To foster transparency, we require you to state the availability of your data in your submission if your data is unavailable to access or unsuitable to post. This may also be a requirement of your funding body or institution. You will have the opportunity to provide a data statement during the submission process. The statement will appear with your published article on ScienceDirect. For more information, visit the Data Statement page.

**AFTER ACCEPTANCE**

**Online proof correction**

To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Corresponding authors will receive an e-mail with a link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors.

If preferred, you can still choose to annotate and upload your edits on the PDF version. All instructions for proofing will be given in the e-mail we send to authors, including alternative methods to the online version and PDF.

We will do everything possible to get your article published quickly and accurately. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. It is important to ensure that all corrections are sent back to us in one communication. Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

**AUTHOR INQUIRIES**

Visit the Elsevier Support Center to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch.

You can also check the status of your submitted article or find out when your accepted article will be published.
