DESCRIPTION

JPRAS Open is an international, open access journal dedicated to publishing case reports, short communications, and full-length articles. **JPRAS Open** will provide the most current source of information and references in plastic, reconstructive & aesthetic surgery. The Journal is based on the continued need to improve surgical care by providing highlights in general reconstructive surgery; cleft lip, palate and craniofacial surgery; head and neck surgery; skin cancer; breast surgery; hand surgery; lower limb trauma; burns; and aesthetic surgery. The Journal will provide authors with fast publication times.

ABSTRACTING AND INDEXING

Directory of Open Access Journals (DOAJ)

EDITORIAL BOARD

Editor

J. O'Donoghue, Newcastle Upon Tyne Hospitals NHS Foundation Trust, Newcastle Upon Tyne, United Kingdom

Chairman of the Committee of Management

N.K. James

President of BAPRAS

D.J. Ward, British Association of Aesthetic Plastic Surgeons, London, United Kingdom

Deputy President of BAPRAS

M. Henley

Honorary Treasurer of BAPRAS

N.K. James

Honorary Secretary of BAPRAS

S.J. Eccles, British Association of Aesthetic Plastic Surgeons, London, United Kingdom

Administrative Editor

S. Hollis, JPRAS Editorial Office, Elsevier Ltd., The Boulevard, Langford Lane, OX5 1GB, Kidlington, United Kingdom

Editorial Advisory Board

- R.B. Ahuja**, University of Delhi, New Delhi, India
K. Allison, James Cook University Hospital, Middlesbrough, England, United Kingdom
P. Andrades, University of Chile, Santiago de Chile, Chile
Z. Arnez, University of Trieste, Trieste, Italy
H. Bannasch, University of Freiburg, Freiburg im Breisgau, Germany
V. Bhattacharya, Banaras Hindu University, Varanasi, India
P. Blondeel, Ghent University, Gent, Belgium
Y. Cao, Tongji University, Shanghai, China
H.C. Chen, China Medical University, Taichung, Taiwan
E.S. Chiu, NYU LANGONE MEDICAL CENTER, New York, New York, United States
D. C-C. Chuang, Chang Gung Memorial Hospital, Taoyuan, Taiwan
J.H. Coert, Erasmus University Rotterdam, Rotterdam, Netherlands
H. Costa, Hospital Centre of Central Lisbon, Lisboa, Portugal
P. Erba, University of Lausanne, Lausanne, Switzerland
D. Erni, Erni Plastic Surgery, Küssnacht Am Rigi, Switzerland
M. Hamdi, UZ Brussel, Brussel, Belgium
D.A. Hudson, University of Cape Town Division of Plastic Surgery, Cape Town, South Africa
Y.C. Jang, Hallym University, Chuncheon, Korea, Republic of
L.-P. Kamolz, Medical University of Graz, Graz, Austria
N. Kang, Royal Free Hospital, London, England, United Kingdom
S. Kauhanen, Helsinki University Central Hospital, HELSINKI, Finland
S.P.J. Kay, Saint James's University Hospital, Leeds, England, United Kingdom
S. Kumta, Lilavati Hospital and Research Centre, Mumbai, India
B. van der Lei, University Medical Centre, Groningen, Netherlands
I.M.J. Mathijssen, Erasmus Medical Center, Rotterdam, Netherlands
S. Menzies, The University of Sydney, Sydney, Australia
S. Nagata, Nagata Microtia and Reconstructive Plastic Surgery Clinic, Toda, Japan
P. Neligan, UNIVERSITY OF WASHINGTON, Seattle, Washington, United States
R. Nnabuko, Mercy Clinic Trauma and General Surgery, Enugu, Nigeria
A. Orlando, Southmead Hospital, Bristol, England, United Kingdom
I. Pitanguy, Pontifical Catholic University of Rio de Janeiro, RIO DE JANEIRO, Brazil
B. Powell, Saint George's Hospital, London, United Kingdom
Q. Qiao, Peking Union Medical College Hospital, Dong Cheng, Beijing, China
V. Ramakrishnan, St. Andrews Hospital, Chelmsford, England, United Kingdom
R. Sabapathy, Ganga Medical Centre and Hospitals Pvt Ltd, Coimbatore, India
T. Schoeller, Medical University of Innsbruck, Innsbruck, Austria
C. Song, Singapore General Hospital, Singapore
B. Stark, University of Freiburg, Freiburg im Breisgau, Germany
K.J. Stewart, Royal Hospital for Children Glasgow, Edinburgh, Scotland, United Kingdom
S. Tan, University of Otago, Dunedin, New Zealand
M. Thatte, Bombay Hospital and Medical Research Centre, Mumbai, India
E.E. Tredget, University of Alberta, Edmonton, Alberta, Canada
F.C. Wei, Chang Gung Memorial Hospital, Taoyuan, Taiwan, ROC
M. Wiberg, Umea University, Umeå, Sweden
J. Wu, Columbia University College of Physicians and Surgeons, New York, New York, United States

GUIDE FOR AUTHORS

Journal scope

JPRAS Open is an official journal of the British Association of Plastic, Reconstructive and Aesthetic Surgeons (BAPRAS). It is an international, open access journal dedicated to publishing case reports, short communications, and full-length articles. *JPRAS Open* will provide the most current source of information and references in plastic, reconstructive & aesthetic surgery. The Journal is based on the continued need to improve surgical care by providing highlights in general reconstructive surgery; cleft lip, palate and craniofacial surgery; head and neck surgery; skin cancer; breast surgery; hand surgery; lower limb trauma; burns; and aesthetic surgery. The Journal will provide authors with fast publication times. *JPRAS Open* publishes case reports, short communications and original articles.

Editorial policy

Original contributions are welcomed from any country, but the prose used in manuscripts must conform to acceptable English usage. The text must be clear, logical and concise. In assessing a manuscript for publication the Editor will also consider its originality, educational value and validity. Recommendations regarding major rearrangements or corrections may be offered to help authors re-write their submission in a way that is acceptable to the journal. The Editor reserves the right to make editorial and literary changes and accepted articles may be subject to further copy-editing to conform to journal style.

Language editing services

Authors who require information about language editing and copyediting services pre- and post-submission please visit <https://www.elsevier.com/languagepolishing> for more information. Use of an English-language editing service is not mandatory, and will not guarantee acceptance or preference for publication. Elsevier neither endorses nor takes responsibility for any products, goods or services offered by outside vendors through our services or in any advertising. For more information, please refer to our Terms & Conditions: <https://www.elsevier.com/termsandconditions>.

Online submission

All material should be submitted through the online submission and review system <http://ees.elsevier.com/jpraso>. All text, including references, figure legends and tables should be prepared in a single file. Illustrations should be supplied as separate files.

Authorship

All authors should have made substantial contributions to **all** of the following:

- (1) the conception and design of the study, or acquisition of data, or analysis and interpretation of data
- (2) drafting the article or revising it critically for important intellectual content
- (3) final approval of the version to be submitted.

Acknowledgements

All contributors who do not meet the criteria for authorship as defined above should be listed in an acknowledgements section. Examples of those who might be acknowledged include a person who provided purely technical help, writing assistance, or a department chair who provided only general support. Authors should disclose whether they had any writing assistance and identify the entity that paid for this assistance.

Conflict of interest

Authors

At the end of the text, under a subheading 'Conflict of interest statement', all authors must disclose any financial and personal relationships with other people or organisations that could inappropriately influence (bias) their work. Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. If the authors have no conflicts of interest, they should state 'none'.

Reviewers

Reviewers must disclose to the Editor any conflicts of interest that could bias their opinions of the manuscript, and they should disqualify themselves from reviewing specific manuscripts if they believe it to be appropriate. Reviewers must state explicitly whether conflicts do or do not exist. Reviewers must not use knowledge of the work, before its publication, to further their own interests.

Role of the funding source

All sources of funding should be declared as an acknowledgement at the end of the text. Authors should declare the role of study sponsors, if any, in the study design, in the collection, analysis and interpretation of data; in the writing of the manuscript; and in the decision to submit the manuscript for publication. If the study sponsors had no such involvement, the authors should so state.

Standardized reporting guidelines

JPRA Open is committed to standardized reporting of clinical trials, meta-analyses, and other studies as follows:

Case reports, cohort studies, and patient series: Authors should adhere to the STROBE guidelines (<http://www.strobe-statement.org/>) and indicate this in the manuscript. Diagnostic measure research: Authors should adhere to STARD guidelines (<http://www.stard-statement.org>) and indicate in the Materials and Methods section of the manuscript that they have done so. Systematic reviews and meta-analyses: Authors should adhere to the PRISMA guidelines (<http://www.prisma-statement.org>) and indicate in the Materials and Methods section of the manuscript that they have done so. Meta-analyses will follow the PRISMA guidelines, be hypothesis driven to address a specific aspect of a topic, include sufficient (ideally at least 10) Level I and II evidence studies that can be supplemented with comparative Level III studies, and not include Level IV studies. The result should clarify the issue addressed. A repeat meta-analysis should follow the original study by at least 5 years, analyze at least 50% more data, and follow the above guidelines. A worthy systematic review will follow the PRISMA guidelines, be hypothesis driven, focus on a specific aspect of a topic, and may include low level evidence. The results should clarify the issue addressed. Randomized clinical trials: Authors should adhere to CONSORT guidelines (<http://www.consort-statement.org>) and indicate in the Materials and Methods section of the manuscript that they have done so. JPRA Open has adopted the proposal from the International Committee of Medical Journal Editors (ICMJE: see <http://www.icmje.org>) which require, as a condition of consideration for publication of clinical trials, registration in a public trials registry. Trials must register at or before the onset of patient enrolment. The clinical trial registration number (ISRCTN) should be included at the end of the article summary. For this purpose, a clinical trial is defined as any research project that prospectively assigns human subjects to intervention or comparison groups to study the cause-and-effect relationship between a medical intervention and a health outcome. Studies designed for other purposes, such as to study pharmacokinetics or major toxicity (e.g. phase I trials) would be exempt. Further information can be found at <http://icmje.org>

Ethics

The results of human and/or animal studies will only be accepted for publication in *JPRAS Open* if it is made clear that investigations were carried out to a high ethical standard. Formal and documented ethical approval from an appropriately constituted research ethics committee should be obtained for all studies involving people, medical records, and anonymised human tissues. All such studies should conform to the World Medical Association Declaration of Helsinki (June 1964) and subsequent amendments (<http://www.wma.net/en/30publications/10policies/b3/index.html>) and manuscripts should include a statement that the research protocol was approved by the local Ethical Committee or equivalent.

Animal experiments require full compliance with local, national, ethical, and regulatory principles, and local licensing arrangements and the journal will not accept papers for publication if doubts exist over the standards of care and humanity shown to experimental animals. For this reason a clear statement of the care principles used should be included in the text.

Guidelines on publication ethics adhered to by this journal can be found on the Committee on Publication Ethics (COPE) website at <http://www.publicationethics.org>.

Covering letter

Manuscripts must be accompanied by a covering letter stating that the current "Guide for Authors" has been read, thereby indicating compliance with those instructions and acceptance of the conditions posed. The letter should state that the authors have seen and agreed to the submitted version of the paper, and bear responsibility for it; that all who have been acknowledged as contributors or as providers of personal communications have agreed to their inclusion; that the material is original; and that it has been neither published elsewhere nor submitted for publication simultaneously. In addition the letter should state that if accepted, the paper will not be published elsewhere in the same or similar form, in English or in any other language, without written consent of the copyright holder.

Preparation of manuscripts

Failure to submit papers in accordance with these instructions will result in the return of the manuscript for correction before it is sent out for review. All copy must be typed double spaced, including text, bibliographies, figure legends and tables. Use a standard, easy-to-read word processor font such as Times New Roman or Arial. All pages should be numbered in the bottom right corner or bottom centre. Papers should be set out as follows: title page, summary, keywords, text, acknowledgements, references, figure legends, tables.

Main article types

- **Original research articles** should generally be no more than 3000 words in length, with 40 references and 16 figures/illustrated images/ tables. Please note that composite figures count as individual items.
- **Review papers** should be no more than 4000 words, with 80 references and 16 figures/illustrated imaged/tables. Please note that composite figures count as individual items.

Other article types

- **Case reports and short communications** should be presented as briefly as possible. Succinct articles are more likely to be accepted for publication. Case reports should be no more than 1200 words, with a maximum of 10 references and four tables/figures.

Title page

The title page should give the following:

- (1) title of the article
- (2) initials and name of each author
- (3) name and address of the department or institution to which the work should be attributed
- (4) the name, address, telephone, fax and e-mail details of the author responsible for editorial correspondence
- (5) details of any meeting at which the work was presented, wholly or in part.

Summary and keywords

The article summary should consist of no more than 300 words. The journal does not demand structured abstracts, but the summary should briefly describe the background and purposes of the study, the subjects studied and the methods used, the main findings (including specific data and statistical analysis) and the conclusions. Please bear in mind that the summary will be visible through all the major abstracting services (such as MEDLINE and Scopus) and should therefore be an accurate and concise outline of the paper. Four to six keywords should be provided at the end of the summary.

Text

Headings should be appropriate to the nature of the paper. Research papers should usually be split into sections under the headings: Introduction, Materials/Patients and Methods, Results and Discussion. Other headings may be appropriate depending on the nature of the paper; the proper use of headings enhances clarity and readability. Normally only two categories of heading should be used, which should be clearly distinguished.

Drug/device names: Use generic names of drugs, suture materials and instruments whenever possible. Give the trade name in brackets after the generic or approved name, followed by manufacturer, city, state (if US), and country. Proprietary names should be capitalised.

Abbreviations should be avoided in the title and summary. Explain abbreviations when they first occur in the text.

Numbers: use SI units throughout. Spell out the numbers one to ten except when used for units of measurement (mass, time, length); for numbers over ten use numerals except when starting a sentence. Do not give percentages if the total number in the sample is less than 50. Percentages greater than ten should be rounded to the nearest whole number. Numerical data should be analysed by appropriate statistical methods. When evaluating a manuscript, the Editor and statistical referees will consider the design of the study, the presentation of the data, the analysis of the data and the interpretation of the results. The use of standard deviation and standard error should be clearly distinguished. The statistical test(s) used should be stated clearly in the 'Methods' section of the paper. Statistical significance should not be confused with clinical significance. In particular, 'negative' findings should be interpreted through the use of confidence intervals. Authors should beware of placing undue emphasis on secondary analyses, especially when they are suggested by an inspection of the data.

Tables

These should be double-spaced, and contain only horizontal rules. Format tables with tabs rather than spaces, or prepare them as tables in Microsoft Word. Do not submit tables as photographs. A short descriptive title should appear above each table and any footnotes, suitably identified, below. Care must be taken to ensure that all units are included. Ensure that each table is cited in the text.

Figures

Figures should be submitted online as separate files. The minimum resolution for high quality reproduction is 300 dpi. For detailed instructions on the preparation of electronic artwork, consult the Artwork Instructions to Authors: <https://www.elsevier.com/artworkinstructions>. Permission to reproduce illustrations from other sources should always be obtained before submission, and details included with the legend. The journal is published in full colour (in print and online) at no charge to authors, so colour photographs should be submitted wherever possible. Photographs must be in sharp focus with good contrast and should not be altered or retouched in any way. 'Before' and 'after' photographs of patients should be standardised in terms of size, position and lighting. Provide scale bars on photomicrographs rather than stating the magnification in the legend. Legends are required for figures and should be included as part of the manuscript. All figures should be numbered in a single sequence.

Patient confidentiality: where illustrations include individuals of whatever age who are recognizable or whose identity may be deduced from the context, written consent must be obtained for publication. All identifying features not considered relevant to the text should be obscured.

Supplementary data (including multimedia and video)

The journal accepts supplementary material to support and enhance your scientific research. Supplementary files allow the author to submit supporting applications, movies, animation sequences, high-resolution images, background datasets, sound clips and more, which will be published online alongside the electronic version of your article. In order to ensure that your submitted material is directly usable, please ensure that data is provided in one of the recommended file formats (for detailed guidance on formats for supplementary files go to <https://www.elsevier.com/authors/author-schemas/artwork-and-media-instructions>).

Use of inclusive language

Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Articles should make no assumptions about the beliefs or commitments of any reader, should contain nothing which might imply that one individual is superior to another on the grounds of race, sex, culture or any other characteristic, and should use inclusive language throughout. Authors should ensure that writing is free from bias, for instance by using 'he or she', 'his/her' instead of 'he' or 'his', and by making use of job titles that are free of stereotyping (e.g. 'chairperson' instead of 'chairman' and 'flight attendant' instead of 'stewardess').

References

Please ensure that you include all relevant references to previous articles in *JPRAS Open*. The accuracy of references is the responsibility of the authors. Limit citations to those that are essential to the study. It is not necessary or appropriate to quote each and every historical reference unless there is a specific point to be made. References derived from computer literature searches should not be cited unless they have been read and contribute specifically to the discussion.

References should be cited in the text in numerical order, not alphabetically, and be indicated in the text by superscript numbers, e.g. 1, 2 or 1-4. The reference list should be typed double-spaced and in numerical order. If there are more than six authors list only the first three followed by 'et al'. Journal titles should be abbreviated according to Index Medicus (see <http://www.nlm.nih.gov/tsd/serials/lji.html>). Internet resources should have their accessibility verified and all URLs should be checked again at proof stage.

Examples

Journal article: Frame JD, Frame JE. Modifying integra as a regeneration template in deep tissue planes. *J Plast Reconstruct Aesthet Surg* 2006;59;460-4.

Book chapter: Lister GD. Skin flaps. In Green DP, ed. *Operative Hand Surgery*. 3rd ed. New York: Churchill Livingstone, 1993: 1741-1823.

Book: Mathes SJ, Nahai F. *Reconstructive Surgery: principles, anatomy, and technique*. New York: Churchill Livingstone, 1997.

Internet resource: International Committee of Medical Journal Editors. Uniform requirements for manuscripts submitted to biomedical journals. <http://www.icmje.org>. [Accessibility verified March 21, 2008]

Dataset: Oguro, M, Imahiro, S, Saito, S, Nakashizuka, T. Mortality data for Japanese oak wilt disease and surrounding forest compositions, Mendeley Data, v1; 2015. <http://dx.doi.org/10.17632/xwj98nb39r.1>.

Article transfer service

This journal is part of our Article Transfer Service. This means that if the Editor feels your article is more suitable in one of our other participating journals, then you may be asked to consider transferring the article to one of those. If you agree, your article will be transferred automatically on your behalf with no need to reformat. Please note that your article will be reviewed again by the new journal.

[More information](#).

Retained author rights

As an author you (or your employer or institution) retain certain rights, including copyright; for details you are referred to <https://www.elsevier.com/OAauthoragreement>. If excerpts from other copyrighted works (e.g. illustrations and tables) are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has preprinted forms for use by authors in these cases: please see <https://www.elsevier.com/permissions>. Borrowed material should be acknowledged in the legends in this style: 'Reproduced with the permission of ... (publishers/journal) from (reference)'.

Copyright

Upon acceptance of an article, authors will be asked to complete an 'Exclusive License Agreement' (see [more information](#) on this). Permitted third party reuse of open access articles is determined by the author's choice of [user license](#).

Author rights

As an author you (or your employer or institution) have certain rights to reuse your work. [More information](#).

Elsevier supports responsible sharing

Find out how you can [share your research](#) published in Elsevier journals.

Role of the funding source

You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement then this should be stated.

Funding body agreements and policies

Elsevier has established a number of agreements with funding bodies which allow authors to comply with their funder's open access policies. Some funding bodies will reimburse the author for the gold open access publication fee. Details of [existing agreements](#) are available online.

Open access

This is an open access journal: all articles will be immediately and permanently free for everyone to read and download. To provide open access, this journal has an open access fee (also known as an article publishing charge APC) which needs to be paid by the authors or on their behalf e.g. by their research funder or institution. Permitted third party (re)use is defined by the following [Creative Commons user licenses](#):

Creative Commons Attribution (CC BY)

Lets others distribute and copy the article, create extracts, abstracts, and other revised versions, adaptations or derivative works of or from an article (such as a translation), include in a collective work (such as an anthology), text or data mine the article, even for commercial purposes, as long as they credit the author(s), do not represent the author as endorsing their adaptation of the article, and do not modify the article in such a way as to damage the author's honor or reputation.

Creative Commons Attribution-NonCommercial-NoDerivs (CC BY-NC-ND)

For non-commercial purposes, lets others distribute and copy the article, and to include in a collective work (such as an anthology), as long as they credit the author(s) and provided they do not alter or modify the article.

The open access publication fee for this journal is £460 for case reports and short communications and £1,200 for full-length articles, and £800 for review articles, excluding taxes. There is a EUR 100 discount for members of EURAPS who are first, second or last Society authors for JPRAS Open, excluding taxes. Learn more about Elsevier's pricing policy: <https://www.elsevier.com/openaccesspricing>.

Peer review

This journal operates a single blind review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of one independent expert reviewer to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. [More information on types of peer review](#).

Proofs

One set of page proofs in PDF format will be sent by e-mail to the corresponding author, which they are requested to correct and return within 48 hours. Elsevier now sends PDF proofs which can be annotated; for this you will need to download Adobe Reader version 7 available free from [Adobe](#). Instructions on how to annotate PDF files will accompany the proofs. The exact system requirements are given at the [Adobe](#) site.

If you do not wish to use the PDF annotations function, you may list the corrections (including replies to the Query Form) in an e-mail. Please list your corrections quoting line number. If, for any reason, this is not possible, then mark the corrections and any other comments (including replies to the Query Form) on a printout of your proof and return by fax, or scan the pages and e-mail, or by post.

Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. We will do everything possible to get your article published quickly and accurately. Therefore, it is important to ensure that all of your corrections are sent back to us in one communication: please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility. Note that Elsevier may proceed with the publication of your article if no response is received.

Offprints

The corresponding author, at no cost, will be provided with a PDF file of the article via e-mail or, alternatively, 25 free paper offprints. The PDF file is a watermarked version of the published article and includes a cover sheet with the journal cover image and a disclaimer outlining the terms and conditions of use. Additional paper offprints can be ordered by the authors. An order form with prices will be sent to the corresponding author.

Formatting of funding sources

List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, please include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Data references

This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

Reference management software

Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support [Citation Style Language styles](#), such as [Mendeley](#). Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal's style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. [More information on how to remove field codes from different reference management software](#).

Users of Mendeley Desktop can easily install the reference style for this journal by clicking the following link:

<http://open.mendeley.com/use-citation-style/jpras-open>

When preparing your manuscript, you will then be able to select this style using the Mendeley plug-ins for Microsoft Word or LibreOffice.

Research data

This journal encourages and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings. To facilitate reproducibility and data reuse, this journal also encourages you to share your software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. If you are sharing data in one of these ways, you are encouraged to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the [research data](#) page.

Data linking

If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the [database linking page](#).

For [supported data repositories](#) a repository banner will automatically appear next to your published article on ScienceDirect.

In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

Mendeley Data

This journal supports Mendeley Data, enabling you to deposit any research data (including raw and processed data, video, code, software, algorithms, protocols, and methods) associated with your manuscript in a free-to-use, open access repository. During the submission process, after uploading your manuscript, you will have the opportunity to upload your relevant datasets directly to *Mendeley Data*. The datasets will be listed and directly accessible to readers next to your published article online.

For more information, visit the [Mendeley Data for journals page](#).

Data statement

To foster transparency, we encourage you to state the availability of your data in your submission. This may be a requirement of your funding body or institution. If your data is unavailable to access or unsuitable to post, you will have the opportunity to indicate why during the submission process, for example by stating that the research data is confidential. The statement will appear with your published article on ScienceDirect. For more information, visit the [Data Statement page](#).
