DESCRIPTION

*Marine Geology* is the premier international journal on marine geological processes in the broadest sense. We seek papers that are comprehensive, interdisciplinary and synthetic that will be lasting contributions to the field. Although most papers are based on regional studies, they must demonstrate new findings of international significance.

We accept papers on subjects as diverse as seafloor hydrothermal systems, beach dynamics, early diagenesis, microbiological studies in sediments, palaeoclimate studies and geophysical studies of the seabed. We encourage papers that address emerging new fields, for example the influence of anthropogenic processes on coastal/marine geology and coastal/marine geoarchaeology. We insist that the papers are concerned with the marine realm and that they deal with geology: with rocks and/or sediments now in the ocean (not on land), and physical and chemical processes affecting them.

Papers should address scientific hypotheses: highly descriptive data compilations or papers that deal only with marine management and risk assessment or hydrocarbon reservoir characterisation should be submitted to other journals. Papers on laboratory or modelling studies must demonstrate direct relevance to marine processes or deposits. The primary criteria for acceptance of papers is that the science is of high quality, novel, significant, and of broad international interest.

*Marine Geology* now requires that a submitted manuscript includes a statement indicating that the data are posted to a trusted repository, and a DOI for the data repository allowing journal and reviewer access to posted data. Where this is not possibly, the author(s) must clearly justify why. This may include exceptions that must be clearly indicated when the manuscript is submitted. The Editors-in-Chief will evaluate the statement during the evaluation process.

**Benefits to authors**
We also provide many author benefits, such as free PDFs, a liberal copyright policy, special discounts on Elsevier publications and much more. Please click here for more information on our [author services](#).

This journal welcomes contributions that support and advance the UN’s [sustainable development goals](#)

AUDIENCE

Marine geologists, marine geochemists, marine geophysicists.

EDITORIAL BOARD

Editors-in-Chief
Edward Anthony, European Research and Education Centre for Environmental Geosciences, Aix en Provence, France
Coastal, Deltaic and Estuarine marine geology, Inner shelf and coastal processes, Beach morphodynamics, Anthropogenic impacts on coasts
Shu Gao, Nanjing University, Nanjing, China
Marine sediment dynamics, Coastal and estuarine processes, Shelf bedforms, tidal inlets, and tidal-flat geomorphology, Land-ocean interaction, Holocene shelf sedimentary systems, Anthropogenic processes in shelf regions
Adina Paytan, University of California Santa Cruz, Santa Cruz, California, United States of America
Biogeochemistry, inorganic geochemistry, Stable isotopes, Paleoceanography, Low temperature geochemistry, Global cycles
Michele Rebesco, National Institute of Oceanography and Experimental Geophysics, Sgonico, Italy
My research interests are centred on the Geological/geophysical exploration of continental margins, Aimed at depositional processes and paleoclimatic reconstruction. My main focus is on polar margins and interacting downslope and alongslope deep-sea sedimentary processes and submarine instabilities.

Managing Editor
Federica Donda, National Institute of Oceanography and Experimental Geophysics, Sgonico, Italy
The reconstruction of the paleoenvironmental and Paleoclimate evolution of continental margins at both low and high latitudes through a seismostrigraphic approach, The geological-geophysical characterization of geofluids, also aimed at their underground storage
Editorial Board

Tiago Alves, Cardiff University, Cardiff, United Kingdom
Sustainable Geoscience, Marine Geology and Geophysics, CCS, GeoEnergy and Petroleum Geology, Environmental studies of continental shelves and slopes, Sequence stratigraphy, Structural Geology, Basin Analysis, Palaeoceanography

Alessandro Amorosi, University of Bologna, Bologna, Italy
Sequence stratigraphy, Alluvial, deltaic and coastal depositional environments, Quaternary, Source-to-sink, Sediment provenance, Environmental sedimentology

Alessandra Asioli, Marine Science Research Institute National Research Council Bologna Branch, Bologna, Italy
Micropaleontology, foraminifera, biostratigraphy, paleoceanography, Quaternary

Christine Batchelor, The University of Newcastle, Callaghan, New South Wales, Australia
Past ice sheets, Quaternary, Glacial geomorphology, Bathymetry, Seismic data

Serge Berné, University of Perpignan Via Domitia, Perpignan, France
Sedimentary Geology, Carbonate Sedimentology, Sedimentary Basins, Carbonate Platforms, Reefs and Slopes, Deep Water Carbonates, Global carbonates, Stratigraphic Forward Modelling, Petroleum Geology, Carbonate Reservoir Geology, Carbonate Geophysics

Stefanie Brachfeld, Montclair State University, Montclair, New Jersey, United States of America
Antarctic Science, polar processes, environmental magnetism, paleomagnetism, paleoclimatology

Laura Brothers, US Geological Survey Woods Hole Coastal and Marine Science Center, Falmouth, Massachusetts, United States of America
Continental shelf evolution, Shallow stratigraphy, Seafloor characterization, Seabed fluid flow, Sea-level change

Suzanne Bull, GNS Science Ltd, Lower Hutt, New Zealand
Mass transport deposits, Submarine slope failure, Deep water sedimentology, Seismic and structural interpretation, Ancient analogues and outcrop studies, Tectonostratigraphy, Tsunami

Licheng Cao, China University of Geosciences College of Marine Science and Technology, Wuhan, China
Drainage evolution, Paleogeography, Sediment provenance, Detrital geochronology

Rebecca Jane Carey, University of Tasmania, Hobart, Australia
Volcanology, Marine Geoscience, Sedimentology

Hui Chen, Sun Yat-Sen University, Guangzhou, China
Deep-sea bathymetry, Deep-water depositional processes, Topography-current interaction

SungKwun K. Chough, Seoul National University, Gwanak-gu, South Korea
Marine sediments, Benthic flux, Biogeochemical cycles, Gas hydrate, Upwelling system, Nutrient turnover, Large sulfur bacteria, Early diagenetic modelling, Carbon cycle

Pedro Costa, University of Coimbra, Department of Earth Sciences, Coimbra, Portugal
Coastal and marine geology, Natural hazards, Tsunami and Storm deposits, Sedimentology, Sediment dynamics, Adaptation to climate change, Provenance studies, Sediment transport modelling

Deniz Cukur, Korea Institute of Geoscience and Mineral Resources, Daejeon, South Korea
Submarine landslides, Seismic stratigraphy, Shallow gas, Deepwater sedimentation, Sedimentary evolution of lakes

Zhijun Dai, State Key Laboratory of Estuarine and Coastal Research, Shanghai, China
Estuarine, Coastal and deltaic morphodynamics, Beach, Tidal marsh and mangroves sedimentary dynamics, Anthropogenic pressures on coasts, Coastal management; Coastal Policy;

Sergio Dillenburg, Federal University of Rio Grande do Sul, PORTO ALEGRE, Brazil
Coastal evolution, Coastal barriers, Coastal Dunes, Beach/foreshore ridge plains as records of climate and oceanographic change

Job Droonkers
Physical coastal and marine processes, coastal and estuarine morphodynamics and integrated coastal zone management. Former head of the coastal and marine studies department of the Ministry of Infrastructure and Water Management, Netherlands, and former professor in Physics of Coastal Systems at Utrecht University, I am currently advisor for coastal zone adaptation to climate change and chief-editor of the Coastal Wiki, international knowledge site on coastal and marine processes and practices

Rebecca Englert, Kiel University, Kiel, Germany
Process sedimentology, Deep-water stratigraphy, Froude-supercritical bedforms

Gemma ERCILLA, Institute of Marine Sciences, Barcelona, Spain
Fields of interest, geomorphology, Seismic stratigraphic architecture, Sedimentology, Submarine fans and valleys, Submarine landslides, Contourites, Glacio-marine systems, Faults, Seafloor erosion, Geohazards.

Nathalie Fagel, University of Liege, Liège, Belgium
Daidu Fan, Tongji University, Shanghai, China
Marine sedimentology, sediment- and morpho-dynamics, marine sedimentary OC cycling, Holocene climate change, Anthropocene sedimentology

Jianhua Gao, Nanjing University School of Geography and Ocean Science, Nanjing, China
Sediment dynamic process, land-ocean interaction, continental shelf mud deposit, source-to-sink process, material cycle of tidal salt marsh

Karen Gariboldi, University of Pisa, Department of Earth Sciences, Pisa, Italy
Diatom biostratigraphy, Diatom palaeoecology, Biogenic oozes, Late Miocene, Holocene

John Goff, The University of Texas at Austin Institute for Geophysics, Austin, Texas, United States of America
Marine geophysics, Seafloor, Stratigraphy, Continental shelf, Coastal sediments, Marine sediments

Andrew Green, University of KwaZulu-Natal, Durban, South Africa
Geomorphology, sedimentology and stratigraphy of coastal and marine environments, High resolution seismic stratigraphy of shelves and shallow marine environments, Shelf geomorphology, Sea level change

Jorge Guillén, Barcelona, Spain
sediment dynamics in the continental shelf, coastal morphodynamics, bedforms, geomorphology in shallow environments, coastal evolution

Peter Harris, GRID-Arendal, Arendal, Norway
Oceanography, Seafloor processes, Plastic pollution, Benthic habitats, Marine Geology

Berit Hjelstuen, University of Bergen, Bergen, Norway
Sedimentary processes, seismic stratigraphy, depositional environments, glacial geomorphology, Pleistocene glacial history

Xiaoxia Huang, Chinese Academy of Sciences Institute of Deep Sea and Science and Engineering, Guangzhou, China
Glaciated margin, Ice sheets, Paleobathymetric reconstruction, Antarctic Bottom Water, Contourites, Stratigraphic correlation, Paleoceanography, Sedimentary system, Mass transport deposits, Submarine channels, Carbonate platforms, Atolls, Seismic interpretation, Multichannel seismic reflection

Christian Huberscher, University of Hamburg, Hamburg, Germany
Geologically applied marine geophysics, Underwater volcanism, Neo- and salt tectonics, Fluid flow and escape, Sequence stratigraphy

Luigi Jovane, University of Sao Paulo Institute of Oceanography, , Brazil
Paleomagnetism and Geomagnetism, Marine Geophysics, Stratigraphy, Paleoclimatology and Paleoceanography

Stefanie Kaboth-Bahr, Free University of Berlin, Berlin, Germany
Paleoclimatology, Paleoceanography, Stable Isotope Analysis, Stratigraphy, Micropaleontology, Grain Size Analysis, Biostratigraphy

Gert J. de Lange, Utrecht University, Utrecht, Netherlands
Marine geochemistry, biogeochemistry and paleoceanography

Susana Lebreiro, Geological and Mining Institute of Spain, Madrid, Spain
Paleoceanography, Paleoclimatology, Sedimentology, Stable isotopes, Turbidites, North Atlantic

Xiting Liu, Ocean University of China, Qingdao, China
Paleoclimatology and paleoceanography, Authigenic minerals, Early diagenesis, Sea-level changes, Source to sink, Sedimentary environment

Francisco Jose Lobo, Andalusian Institute of Earth Sciences, Granada, Spain
Marine geomorphology, Seismic interpretation, Marine sedimentology

Renata Giulia Lucchi, National Institute of Oceanography and Experimental Geophysics, Sgonico, Italy
Marine Sedimentation, Polar Margins, Paleoclimate, Paleoceanography, Depositional Processes, Meltwater Pulse, Arctic

Michel de Mahiques, University of Sao Paulo, SAO PAULO, Brazil
Terrigenous sedimentation, Depositional processes

GUIDE FOR AUTHORS

INTRODUCTION

Expectation of authors to undertake reviewing duties
Peer review assists the editors in making editorial decisions and through editorial communications with the author may also assist the author in improving the paper. Peer review is an essential component of formal scholarly communication, and lies at the heart of the scientific method. Elsevier shares the view that authorship and reviewing manuscripts are two inextricable aspects of scholarship.

Editors' Subject Specialities
Authors are asked to suggest an Editor to handle their paper based on the list of subject fields below.

Edward Anthony
Coastal, deltaic and estuarine marine geology; shelf and coastal processes

Adina Paytan
Marine geochemistry, biogeochemistry and palaeoceanography

Michele Rebesco
Deep-sea, Sedimentary processes, Slope instabilities, Glacial sediments, Seismic/morphology interpretations

Shu Gao
Marine sediment dynamics; Coastal and continental shelf morphodynamics; Land-ocean interaction and environmental dynamics; Modeling of the formation of Holocene sedimentary records; Shallow marine processes for material cycling

Editorial Policy
Marine Geology is the premier international journal on marine geological processes in the broadest sense. We seek papers that are comprehensive, interdisciplinary and synthetic that will be lasting contributions to the field. Although most papers are based on regional studies, they must demonstrate new findings of international significance. We accept papers on subjects as diverse as seafloor hydrothermal systems, beach dynamics, early diagenesis, microbiological studies in sediments, palaeoclimate studies and geophysical studies of the seabed. We encourage papers that address emerging new fields, for example the influence of anthropogenic processes on coastal/marine geology and coastal/marine geoarchaeology. We insist that the papers are concerned with the marine realm and that they deal with geology: with rocks, sediments, and physical and chemical processes affecting them. Papers should address scientific hypotheses: highly descriptive data compilations or papers that deal only with marine management and risk assessment should be submitted to other journals. Papers on laboratory or modelling studies must demonstrate direct relevance to marine processes or deposits. The primary criteria for acceptance of papers is that the science is of high quality, novel, significant, and of broad international interest.

Types of paper
The majority of the articles published in the journal are original Research Papers. Research papers should report new and original research of high quality that meet the criteria of being of broad international interest, significant and novel. Authors must warrant that the material has not been previously published and declare in a covering letter any related manuscripts that are submitted or in press. A research paper is typically structured with a brief introduction, if necessary a section on the geological and oceanographic setting, followed by methods, results, discussion and conclusions. The length should be commensurate with the significance of the work and is usually not more than 10,000 words.

Review Articles provide a comprehensive and novel assessment of an issue or significant region in marine geology and should be of interest to a wide readership. A Review Article should provide a balanced, integrated and critical summary of previous work and should evaluate potential controversial issues. Important new data may be presented, but are not the focus of the review. Illustrations should where possible integrate existing data into new comprehensive figures rather than duplicating published work. Length should not normally exceed twice that of a typical Research Paper. Potential authors are invited to consult informally with one of the Editors before preparing a Review Article. The editors may wish to categorize such articles as "Invited Review Article" in the published version. All other reviews will be categorized as "Review Article". Please note that an invitation from the Editors to submit a review article to the journal does not guarantee that it will be accepted for publication.
The **Short Communication** section of Marine Geology is intended to provide rapid publication of immediate results (which will normally arise from fieldwork, but may include significant new laboratory results). The criteria for acceptance of a Short Communication is that it presents exciting and significant new results, for which the interpretation is clear, and which will have an important impact on the international marine geology community. Authors must warrant that the material has not been previously published and explain in a covering letter how the Short Communication meets the criteria in terms of a new result, its significance and its impact. A short communication is not normally more than 4000 words (including abstract and references) and 3 figures.

It is possible to submit a **Comment** that about a recently published Marine Geology paper. Such a Comment must be brief and directed only towards the main issue(s) that are being questioned in the original paper. It is not a vehicle for extensive review or for publishing the author’s new findings. The original author(s) will be invited to write a **Reply** which must likewise be brief and directed only at the issues in question.

A **Special Issue** of Marine Geology is a coherent set of papers on a single scientific theme. The papers must meet the normal criteria for acceptance in Marine Geology.

Further information for prospective guest editors intending to submit a proposal for a special issue in the journal can be found [here](#).

**Submission checklist**

You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

**Ensure that the following items are present:**

One author has been designated as the corresponding author with contact details:

- E-mail address
- Full postal address

All necessary files have been uploaded:

* **Manuscript:**
  - Include keywords
  - All figures (include relevant captions)
  - All tables (including titles, description, footnotes)
  - Ensure all figure and table citations in the text match the files provided
  - Indicate clearly if color should be used for any figures in print

* **Graphical Abstracts / Highlights files** (where applicable)
* **Supplemental files** (where applicable)

Further considerations

- Manuscript has been 'spell checked' and 'grammar checked'
- All references mentioned in the Reference List are cited in the text, and vice versa
- Permission has been obtained for use of copyrighted material from other sources (including the Internet)
- A competing interests statement is provided, even if the authors have no competing interests to declare
- Journal policies detailed in this guide have been reviewed
- Referee suggestions and contact details provided, based on journal requirements

For further information, visit our [Support Center](#).

**BEFORE YOU BEGIN**

**Ethics in publishing**

Please see our information on [Ethics in publishing](#).

**Declaration of competing interest**

Corresponding authors, on behalf of all the authors of a submission, must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential conflicts of interest include employment, consultancies,
stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. All authors, including those without competing interests to declare, should provide the relevant information to the corresponding author (which, where relevant, may specify they have nothing to declare). Corresponding authors should then use this tool to create a shared statement and upload to the submission system at the Attach Files step. Please do not convert the .docx template to another file type. Author signatures are not required.

Declaration of generative AI in scientific writing

The below guidance only refers to the writing process, and not to the use of AI tools to analyse and draw insights from data as part of the research process.

Where authors use generative artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should only use these technologies to improve readability and language. Applying the technology should be done with human oversight and control, and authors should carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or biased. AI and AI-assisted technologies should not be listed as an author or co-author, or be cited as an author. Authorship implies responsibilities and tasks that can only be attributed to and performed by humans, as outlined in Elsevier’s AI policy for authors.

Authors should disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

Disclosure instructions

Authors must disclose the use of generative AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in the core manuscript file, before the References list. The statement should be placed in a new section entitled ‘Declaration of Generative AI and AI-assisted technologies in the writing process’.

Statement: During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.

This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, there is no need to add a statement.

Submission declaration and verification

Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see ‘Multiple, redundant or concurrent publication’ for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify compliance, your article may be checked by Crossref Similarity Check and other originality or duplicate checking software.

Preprints

Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see ‘Multiple, redundant or concurrent publication’ for more information).

Use of inclusive language

Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns ("clinicians, patients/clients") as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. When coding terminology is used, we recommend
to avoid offensive or exclusionary terms such as "master", "slave", "blacklist" and "whitelist". We suggest using alternatives that are more appropriate and (self-) explanatory such as "primary", "secondary", "blocklist" and "allowlist". These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

**Reporting sex- and gender-based analyses**

**Reporting guidance**

For research involving or pertaining to humans, animals or eukaryotic cells, investigators should integrate sex and gender-based analyses (SGBA) into their research design according to funder/sponsor requirements and best practices within a field. Authors should address the sex and/or gender dimensions of their research in their article. In cases where they cannot, they should discuss this as a limitation to their research’s generalizability. Importantly, authors should explicitly state what definitions of sex and/or gender they are applying to enhance the precision, rigor and reproducibility of their research and to avoid ambiguity or conflation of terms and the constructs to which they refer (see Definitions section below). Authors can refer to the **Sex and Gender Equity in Research (SAGER) guidelines** and the **SAGER guidelines checklist**. These offer systematic approaches to the use and editorial review of sex and gender information in study design, data analysis, outcome reporting and research interpretation - however, please note there is no single, universally agreed-upon set of guidelines for defining sex and gender.

**Definitions**

Sex generally refers to a set of biological attributes that are associated with physical and physiological features (e.g., chromosomal genotype, hormonal levels, internal and external anatomy). A binary sex categorization (male/female) is usually designated at birth ("sex assigned at birth"), most often based solely on the visible external anatomy of a newborn. Gender generally refers to socially constructed roles, behaviors, and identities of women, men and gender-diverse people that occur in a historical and cultural context and may vary across societies and over time. Gender influences how people view themselves and each other, how they behave and interact and how power is distributed in society. Sex and gender are often incorrectly portrayed as binary (female/male or woman/man) and unchanging whereas these constructs actually exist along a spectrum and include additional sex categorizations and gender identities such as people who are intersex/have differences of sex development (DSD) or identify as non-binary. Moreover, the terms "sex" and "gender" can be ambiguous—thus it is important for authors to define the manner in which they are used. In addition to this definition guidance and the SAGER guidelines, the **resources on this page** offer further insight around sex and gender in research studies.

**Authorship**

All authors should have made substantial contributions to all of the following: (1) the conception and design of the study, or acquisition of data, or analysis and interpretation of data, (2) drafting the article or revising it critically for important intellectual content, (3) final approval of the version to be submitted.

**Changes to authorship**

Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed.

Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

**Article transfer service**

This journal uses the Elsevier Article Transfer Service to find the best home for your manuscript. This means that if an editor feels your manuscript is more suitable for an alternative journal, you might be asked to consider transferring the manuscript to such a journal. The recommendation might be provided by a Journal Editor, a dedicated Scientific Managing Editor, a tool assisted recommendation,
or a combination. If you agree, your manuscript will be transferred, though you will have the opportunity to make changes to the manuscript before the submission is complete. Please note that your manuscript will be independently reviewed by the new journal. More information.

**Copyright**
Upon acceptance of an article, authors will be asked to complete a 'Journal Publishing Agreement' (see more information on this). An e-mail will be sent to the corresponding author confirming receipt of the manuscript together with a 'Journal Publishing Agreement' form or a link to the online version of this agreement.

Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution and for all other derivative works, including compilations and translations. If excerpts from other copyrighted works are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has preprinted forms for use by authors in these cases.

For gold open access articles: Upon acceptance of an article, authors will be asked to complete a 'License Agreement' (more information). Permitted third party reuse of gold open access articles is determined by the author's choice of user license.

**Author rights**
As an author you (or your employer or institution) have certain rights to reuse your work. More information.

*Elsevier supports responsible sharing*
Find out how you can share your research published in Elsevier journals.

**Role of the funding source**
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement, it is recommended to state this.

**Open access**
Please visit our Open Access page for more information.

*Elsevier Researcher Academy*
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

**Language (usage and editing services)**
Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the Language Editing service available from Elsevier's Language Services.

**Submission**
Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

**Submit your article**
Please submit your article via https://www.editorialmanager.com/margo

**Referees**
Please submit, with the manuscript, the names and addresses of 6 potential referees. Please suggest potentially critical and constructive reviewers specifying reasons for your suggestion. Reviewers should be selected for process-oriented expertise, not merely geographical knowledge. Kindly suggest potential reviewer names representing the full international community (i.e., not only from your own country). These reviewers must NOT be colleagues with whom you collaborated or published papers during the last 5 years nor can they be working at your own institute. Marine Geology relies on the honesty of our authors in the nomination of objective and independent potential reviewers. The proposal of reviewers liable to elicit a conflict of interest should be avoided. Violation of the guidelines above could lead to rejection of your manuscript. Your help is appreciated and may speed up the reviewing process. Please note that the journal may not use all of your suggestions.

**PREPARATION**

**Queries**
For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

*Formatting requirements*
There are no strict formatting requirements but all manuscripts must contain the essential elements needed to convey your manuscript, for example Abstract, Keywords, Introduction, Materials and Methods, Results, Conclusions, Artwork and Tables with Captions. If your article includes any Videos and/or other Supplementary material, this should be included in your initial submission for peer review purposes.

Divide the article into clearly defined sections.

Please ensure the text of your paper is double-spaced this is an essential peer review requirement. Please ensure your paper has consecutive line numbering this is an essential peer review requirement. Please ensure your paper includes page numbers this is an essential peer review requirement.

**Peer review**
This journal operates a single anonymized review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor’s decision is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal's usual procedures, with peer review handled independently of the relevant editor and their research groups. More information on types of peer review.

**Use of word processing software**
It is important that the file be saved in the native format of the word processor used. The text should be in single-column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. In particular, do not use the word processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc. When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). Note that source files of figures, tables and text graphics will be required whether or not you embed your figures in the text. See also the section on Electronic artwork.

To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

**LaTeX**
You are recommended to use the Elsevier article class elsarticle.cls to prepare your manuscript and BibTeX to generate your bibliography.

Our LaTeX site has detailed submission instructions, templates and other information.

**Article structure**
Subdivision - numbered sections
Divide your article into clearly defined and numbered sections. Subsections should be numbered 1.1 (then 1.1.1, 1.1.2, ...), 1.2, etc. (the abstract is not included in section numbering). Use this numbering also for internal cross-referencing: do not just refer to 'the text'. Any subsection may be given a brief heading. Each heading should appear on its own separate line.

1. Introduction
State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results.

2. Regional setting
For papers that focus on an area, provide a brief synopsis of the physical and geological characteristics of the area, sufficient to give the new work context, but again avoid a detailed literature survey.

3. Materials and methods
Provide sufficient detail on methods to allow the work to be reproduced. Methods already published should be indicated by a reference: only relevant modifications should be described. Samples should normally be positioned on a map or in a table. However, lengthy tables of precise positions should be submitted as Datasets (see below).

4. Results
This should highlight the key results (and not repeat material already in figures or tables) and summarise the direct implications of these results.

5. Discussion
This should explore the inter-relationships of different data sets and the broader significance of the results. It may include limited speculation, that will not appear in the conclusions.

6. Conclusions
The short Conclusions section should summarise the conclusions of the study that have been firmly established. It should not duplicate either the Abstract or the Discussion.

7. Data Availability
Authors are required to include a 'Data Availability' section in their manuscript which is visible in ALL reading formats and may refer to data hosted in ANY repository. It should be placed before the references to provide readers with information about where they can obtain the research data required to reproduce the work reported in the manuscript, and typically consists of a simple sentence giving the URL(s) of and citation(s) to the dataset(s). Full information can be found here.

Essential title page information
- **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
- **Author names and affiliations.** Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. You can add your name between parentheses in your own script behind the English transliteration. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lowercase superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.
- **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. This responsibility includes answering any future queries about Methodology and Materials. Ensure that the e-mail address is given and that contact details are kept up to date by the corresponding author.
- **Present/permanent address.** If an author has moved since the work described in the article was done, or was visiting at the time, a ‘Present address’ (or ‘Permanent address’) may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.
**Highlights**
Highlights are mandatory for this journal as they help increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

**Abstract**
A concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s) and the full bibliographic reference. Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

**Graphical abstract**
Although a graphical abstract is optional, its use is encouraged as it draws more attention to the online article. The graphical abstract should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: Please provide an image with a minimum of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. You can view Example Graphical Abstracts on our information site.

**Keywords**
Immediately after the abstract, provide a maximum of 6 keywords, using American spelling and avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

To ensure a consistent approach we have prepared a list of preferred keywords for use at https://www.journals.elsevier.com/marine-geology/policies/marine-geology-keywords. Please select the appropriate subject fields and the geographical area the paper is about. This list is not exhaustive and should be used as a guideline, and authors may additionally suggest any other more suitable keyword for their submission.

**Acknowledgements**
Collate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

**Formatting of funding sources**
List funding sources in this standard way to facilitate compliance to funder’s requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, it is recommended to include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

**Nomenclature and units**
Follow internationally accepted rules and conventions: use the international system of units (SI). If other quantities are mentioned, give their equivalent in SI.
Mathematical formulae
Present simple formulae in the line of normal text where possible. In principle, variables are to be presented in italics. Use the solidus (/) instead of a horizontal line, e.g.,
\[ X/Y \] rather than
\[ \frac{X}{Y} \]

Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separate from the text (if referred to explicitly in the text).

Footnotes
Footnotes should be used sparingly. Number them consecutively throughout the article, using superscript Arabic numbers. Many wordprocessors build footnotes into the text, and this feature may be used. Should this not be the case, indicate the position of footnotes in the text and present the footnotes themselves on a separate sheet at the end of the article. Do not include footnotes in the Reference list.

Artwork
Electronic artwork
General points
• Make sure you use uniform lettering and sizing of your original artwork. Avoid bold font unless essential for clarity.
• Save text in illustrations as "graphics" or enclose the font.
• Only use the following fonts in your illustrations: Arial, Courier, Times, Symbol.
• Number the illustrations according to their sequence in the text.
• Use a logical naming convention for your artwork files.
• Provide captions to illustrations separately.
• Produce images near to the desired size of the printed version.
• Submit each figure as a separate file, preferably eps, tif or pdf.
• All maps must have geographic referencing (UTM or latitude and longitude).

A detailed guide on electronic artwork is available on our website:
https://www.elsevier.com/artworkinstructions

You are urged to visit this site; some excerpts from the detailed information are given here.

Formats
Regardless of the application used, when your electronic artwork is finalised, please "save as" or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):
EPS: Vector drawings. Embed the font or save the text as "graphics".
TIFF: color or grayscale photographs (halftones): always use a minimum of 300 dpi.
TIFF: Bitmapped line drawings: use a minimum of 1000 dpi.
TIFF: Combinations bitmapped line/half-tone (color or grayscale): a minimum of 500 dpi is required.
DOC, XLS or PPT: If your electronic artwork is created in any of these Microsoft Office applications please supply "as is".

Please do not:
• Supply embedded graphics in your wordprocessor (spreadsheet, presentation) document;
• Supply files that are optimised for screen use (like GIF, BMP, PICT, WPG); the resolution is too low;
• Supply files that are too low in resolution;
• Submit graphics that are disproportionately large for the content.

Color artwork
The web version of your article is in full color at no cost and this is the version seen by almost all readers. There is a charge to the author for color reproduction in the print version. If greyscale figures are provided for the print version, the caption will note that a color version is available on the web.

Please make sure that artwork files are in an acceptable format (TIFF, EPS or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures...[etc].
**Figure captions**
Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

**Tables**
Number tables consecutively in accordance with their appearance in the text. Place footnotes to tables below the table body and indicate them with superscript lowercase letters. Avoid vertical rules. Be sparing in the use of tables and ensure that the data presented in tables do not duplicate results described elsewhere in the article.

**References**

*Citation in text*
Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.

*Data references*
This journal requires authors to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

*Preprint references*
Where a preprint has subsequently become available as a peer-reviewed publication, the formal publication should be used as the reference. If there are preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published, these may be referenced. Preprints should be clearly marked as such, for example by including the word preprint, or the name of the preprint server, as part of the reference. The preprint DOI should also be provided.

*References in a special issue*
Please ensure that the words ‘this issue’ are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

*Reference management software*
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal’s style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.

*Reference formatting*
There are no strict requirements on reference formatting at submission. References can be in any style or format as long as the style is consistent. Where applicable, author(s) name(s), journal title/book title, chapter title/article title, year of publication, volume number/book chapter and the article number or pagination must be present. Use of DOI is highly encouraged. The reference style used by the journal will be applied to the accepted article by Elsevier at the proof stage. Note that missing data will be highlighted at proof stage for the author to correct. If you do wish to format the references yourself they should be arranged according to the following examples:

*Reference style*

*Text:* All citations in the text should refer to:

1. **Single author:** the author's name (without initials, unless there is ambiguity) and the year of publication;
2. **Two authors:** both authors' names and the year of publication;
3. **Three or more authors**: first author's name followed by 'et al.' and the year of publication. Citations may be made directly (or parenthetically). Groups of references can be listed either first alphabetically, then chronologically, or vice versa.

Examples: 'as demonstrated (Allan, 2000a, 2000b, 1999; Allan and Jones, 1999).... Or, as demonstrated (Jones, 1999; Allan, 2000).... Kramer et al. (2010) have recently shown ...'

**List**: References should be arranged first alphabetically and then further sorted chronologically if necessary. More than one reference from the same author(s) in the same year must be identified by the letters 'a', 'b', 'c', etc., placed after the year of publication.

**Examples**:

- Reference to a journal publication:

- Reference to a journal publication with an article number:

- Reference to a book:

- Reference to a chapter in an edited book:

- Reference to a website:

- Reference to a dataset:

- Reference to software:

**Journal abbreviations source**

Journal names should be abbreviated according to the List of Title Word Abbreviations.

**Video**

Elsevier accepts video material and animation sequences to support and enhance your scientific research. Authors who have video or animation files that they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table by referring to the video or animation content and noting in the body text where it should be placed. All submitted files should be properly labeled so that they directly relate to the video file's content. In order to ensure that your video or animation material is directly usable, please provide the file in one of our recommended file formats with a preferred maximum size of 150 MB per file, 1 GB in total. Video and animation files supplied will be published online in the electronic version of your article in Elsevier Web products, including ScienceDirect. Please supply 'stills' with your files: you can choose any frame from the video or animation or make a separate image. These will be used instead of standard icons and will personalize the link to your video data. For more detailed instructions please visit our video instruction pages. Note: since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and the print version for the portions of the article that refer to this content.

**Data visualization**

Include interactive data visualizations in your publication and let your readers interact and engage more closely with your research. Follow the instructions here to find out about available data visualization options and how to include them with your article.

**Supplementary data**

Elsevier accepts electronic supplementary material to support and enhance your scientific research. Supplementary files offer the author additional possibilities to publish supporting applications, high-resolution images, background datasets, sound clips and more. Supplementary files supplied will be published online alongside the electronic version of your article in Elsevier Web products, including
ScienceDirect: https://www.sciencedirect.com. In order to ensure that your submitted material is directly usable, please provide the data in one of our recommended file formats. Authors should submit the material in electronic format together with the article and supply a concise and descriptive caption for each file. For more detailed instructions please visit our artwork instruction pages at https://www.elsevier.com/artworkinstructions.

**Research data**
This journal requires and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings, which may also include software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. When sharing data in one of these ways, you are expected to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

**Data linking**
If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.

For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.

In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

**To maximise the visibility of your data, authors are invited to add a citation to their datasets by including a data reference in their Reference List as per the 'Data References' instructions elsewhere on this page.**

**Data statement**
To foster transparency, we require you to state the availability of your data in your submission if your data is unavailable to access or unsuitable to post. This may also be a requirement of your funding body or institution. You will have the opportunity to provide a data statement during the submission process. The statement will appear with your published article on ScienceDirect. For more information, visit the Data Statement page.

**Additional requirements for manuscripts:**
- Use double line-spacing
- Insert continuous line numbering
- Submit figures separate from the text, do not embed figures in the text
- Use EPS or TIFF figures, or PDF figures of less than 3 MB

**AFTER ACCEPTANCE**

**Online proof correction**
To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Corresponding authors will receive an e-mail with a link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors.
If preferred, you can still choose to annotate and upload your edits on the PDF version. All instructions for proofing will be given in the e-mail we send to authors, including alternative methods to the online version and PDF.

We will do everything possible to get your article published quickly and accurately. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. It is important to ensure that all corrections are sent back to us in one communication. Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

**Offprints**
The corresponding author will, at no cost, receive a customized Share Link providing 50 days free access to the final published version of the article on ScienceDirect. The Share Link can be used for sharing the article via any communication channel, including email and social media. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Corresponding authors who have published their article gold open access do not receive a Share Link as their final published version of the article is available open access on ScienceDirect and can be shared through the article DOI link.

**AUTHOR INQUIRIES**
For inquiries relating to the submission of articles (including electronic submission) please contact the Editorial Office. You can track accepted articles at [https://www.elsevier.com/trackarticle](https://www.elsevier.com/trackarticle). You can also check our Author FAQs ([https://www.elsevier.com/authorFAQ](https://www.elsevier.com/authorFAQ)) and/or contact Customer Support via [https://service.elsevier.com](https://service.elsevier.com).
