#### DESCRIPTION

Materials Letters is an interdisciplinary journal devoted to rapid communications on the science, applications, and processing of materials.

Materials Letters is dedicated to publishing novel, cutting edge reports of broad interest to the materials community. The journal provides a forum for materials scientists and engineers, physicists, and chemists to rapidly communicate on the most important topics in the field of materials.

Contributions include, but are not limited to, a variety of topics such as:

- **Materials** - Metals and alloys, amorphous solids, ceramics, composites, polymers, semiconductors, biomaterials and biological materials, advanced materials, metamaterials, high-entropy alloys, nitrides, and oxides.
- **Applications** - Structural, opto-electronic, magnetic, biomedical, MEMS, sensors, electronics, smart materials, additive manufacturing, membranes, materials for energy systems, batteries, photocatalysis.
- **Characterization** - Analytical, microscopy, scanning probes, nanoscopic, optical, electrical, magnetic, acoustic, spectroscopic, diffraction.
- **Novel Materials** - Micro and nanostructures (nanowires, nanotubes, nanoparticles), nanocomposites, thin films, superlattices, quantum dots.
- **Processing** - Crystal growth, thin film processing, sol-gel processing, solvo-hydrothermal processing, mechanical processing, assembly, nanocrystalline processing, sustainable/green processing routes.
- **Properties** - Mechanical, magnetic, optical, electrical, ferroelectric/piezoelectric, thermal, interfacial, transport, thermodynamic, photoelectrochemical, photocatalytic, thermoelectric, biological, electrochemical.
- **Synthesis** - Quenching, solid state, mechano-chemical, solidification, solution synthesis, vapor deposition, high pressure, explosive, MOVPE and LPE epitaxial processes, single crystal growth.
- **Machine Learning/Artificial Intelligence** - Materials discovery, design of materials and digital materials science.

#### AUDIENCE

Materials scientists, metallurgists, solid state chemists and physicists

Zongqian Hu, Beijing Institute of Radiation Medicine, Beijing, China
Emanuel Ionescu, Technical University of Darmstadt, Darmstadt, Germany
Ceramics, Nanocomposites, Inorganic polymers, Materials chemistry, Materials synthesis

Jason S. C. Jang, National Central University, Zhongli District, Taiwan
Bulk metallic glass, Bulk amorphous alloy, Light-weight high entropy alloy, Mechanical properties

Yuri Kaganovsky, Bar-Ilan University, Department of Physics, Ramat Gan, Israel
Diffusion in solids, Surface phenomena, Photo-induced phenomena and mass transfer in thin solid films, Light scattering at solids surfaces, and Laser micro-fabrication

Po-We Kao, National Sun Yat-sen University, Department of Materials and Optoelectronic Science, Kaohsiung, Taiwan
Metals and Alloys, Composites, Mechanical Property

John Kilner, Imperial College London, Department of Materials, London, United Kingdom
Solid Oxide Fuel Cells (SOFC), Solid Oxide Electrolysis Cells (SOEC), Oxygen Ion conductors, Protonic conductors, Mixed Ionic Electronic Conductors (MIEC), Ion beam solid interactions, ion beam analysis

Praveen Kumar, Indian Association for the Cultivation of Science, Kolkata, India
Materials Science & Engineering, III-V Semiconductors, 2D-Materials, MXenes, Carbon Nanostructures, Surface Physics, Photodetectors, Water-splitting and CO2 reduction

Michael Lanagan, The Pennsylvania State University, Department of Engineering Science and Mechanics, University Park, Pennsylvania, United States of America
Dielectrics, Ceramics, Microwave, High E-Field, Reliability

Tahar Laoui, King Fahd University of Petroleum & Minerals, Al Dhahran, Saudi Arabia
Electrocatalysis, Photocatalysis, Single-atom catalysts, Metal-air batteries, Fuel cells

Bin Li, University of Nevada Reno, Reno, Nevada, United States of America
Lightweight magnesium alloys, Titanium, Deformation twinning, Phase transformation, TEM, Atomistic simulations

Xiaoguang Li, University of Science and Technology of China, Department of Physics, Hefei, Anhui, China
Research interests include the synthesis, microstructure, physical properties, and prototype devices of transitional metal oxides such as ferroelectric and multiferroic based electronic devices.

Yang Yang Li, City University of Hong Kong, Department of Materials Science and Engineering, Hong Kong, China
Amorphous, Ceramics, Biomimetics, High-entropy, Gels

Tessy López-Goerne, Metropolitan Autonomous University - Xochimilco Campus, Coyoacan, Mexico
Catalytic Nanomedicine, Nanoparticles, Bionanocatalysts, Catalysis, TiO2, SiO2, DNA, Sol-Gel, Characterization

Zhaoping Lyu, University of Science and Technology Beijing State Key Laboratory for Advanced Metals and Materials, Beijing, China
High strength steels, High temperature steels, High entropy alloys, Bulk metallic glasses, Porous metals

Xiu-Liang Ma, Institute of Metal Research Chinese Academy of Sciences, Shenyang, China
Transmission electron microscopy, Ferroelectric domains

João F. Mano, University of Aveiro Chemistry Department, Aveiro, Portugal
Polymeric biomaterials, Tissue Engineering, Bioengineering, Biomimetic materials

Kush P. Mehta, University of Strathclyde, Glasgow, United Kingdom
Dissimilar materials welding, Materials characterization, Mechanical properties of welds and processed regions, Materials and manufacturing processes

Vladimir Yu. Novikov, National University of Science and Technology MISIS, Moskva, Russian Federation
Polycrystalline materials, microstructure formation in the course of phase transformations

Alexander Orlov, Stony Brook University, Stony Brook, New York, United States of America
Design of nanomaterials, Nanocomposites and nanostructured surfaces, Sustainable energy generation, Heterogeneous catalysis, Photocatalysis, In-situ studies of catalysts and surface
science, Physicochemical methods for water and air treatment, Sustainable and green engineering, Pollution prevention, materials science

Yue Qi, Brown University, Providence, Rhode Island, United States of America
Computational Materials Science, Multiscale modeling, energy storage

Philippa A. S. Reed, University of Southampton, Southampton, United Kingdom
Research interests centre on investigating micromechanisms of failure in a range of structural materials including engine materials, power generation turbine materials, hybrid pressure vessels, pipes and welds. This includes application of numerical modelling approaches to failure problems, assessment and modelling of crack initiation and growth behaviour in a range of materials systems/architectures. A particular focus is the effects of external service conditions such as temperature, environment (e.g. oxidation and hydrogen embrittlement) and complex loading on failure processes. These interests are reflected in recent and ongoing research collaborations with EDF, Rolls Royce, TWI and many other industry partners

Michael Sayer, Queen's University, Kingston, Ontario, Canada
Thin Films, Sol Gel Methods, Dielectrics/ferroelectrics, Composites, Materials applications

Theo Siegrist, FAMU-FSU College of Engineering, Tallahassee, Florida, United States of America
Materials characterization, X-ray diffraction, Crystal chemistry, Superconductors, Magnetism

Trilok Singh, Indian Institute of Technology Kharagpur, Kharagpur, India

Yoshiyuki Sugahara, Waseda University, Faculty of Science and Engineering, Department of Applied Chemistry
Polymer Chemistry, Shinjuku-Ku, Tokyo, Japan
Nanomaterials, Oxide nanoparticles, Sol-gel process, Polymer-derived ceramics, Hybrid materials

Min Wang, The University of Hong Kong, Department of Mechanical Engineering, Hong Kong, Hong Kong
Biomedical materials (ceramics, metals, polymers, and composites, Including nano-biomaterials, In various forms, Dense or porous, Bulk or coating, Particulate or fibrous, etc.), In vitro and in vivo evaluation of biomaterials, Tissue engineering, Materials and systems for controlled release of drugs / biomolecules / genes, Theranostics, Surface engineering, Composite materials, Nanotechnology, 3D printing

Stephan Wolf, Friedrich-Alexander-University Erlangen-Nurnberg, Department of Materials Science and Engineering, Erlangen, Germany
Biological Materials, Bioinspired Materials, Bioinspired Materials Synthesis, Biomaterials, Crystallization and Nonclassical Crystallization

Helen (Xiaoxue) Xu, University of Technology Sydney - City Campus, Ultimo, New South Wales, Australia
Biomaterials, metallic materials, luminescent nanomaterials for cancer cell labeling, drug delivery and nanomedicine

Dou Zhang, Central South University, Changsha, China
Ferroelectrics, Piezoelectrics, Dielectrics, Ceramics, Piezoelectric Composites, Dielectric Composites, Devices

Kai Zheng, Institute of Biomaterials, University of Erlangen-Nuremberg, Erlangen, Germany
Biomaterials, Bioactive glasses, Nanoparticles, Hydrogels, Tissue regeneration

Cordt Zollfrank, Technical University of Munich School of Life Sciences Weihenstephan, Freising, Germany
Biomimetics, Biomaterials

GUIDE FOR AUTHORS

Free Text
Materials Letters has an open access companion journal, Materials Letters X

Aims and Scope
Materials Letters

An interdisciplinary journal devoted to rapid communications on the science, applications, and processing of materials.

Materials Letters has an open access companion journal Materials Letters: X, sharing the same aims and scope, editorial team, submission system and rigorous peer review

Materials Letters is dedicated to publishing novel, cutting edge reports of broad interest to the materials community. The journal provides a forum for materials scientists and engineers, physicists, and chemists to rapidly communicate on the most important topics in the field of materials.

Contributions include, but are not limited to, a variety of topics such as Materials- Metals and alloys, amorphous solids, ceramics, composites, polymers, semiconductors, biomaterials and biological materials, advanced materials, metamaterials, high-entropy alloys, nitrides, and oxides. Applications- Structural, opto-electronic, magnetic, biomedical, MEMS, sensors, electronics, smart materials, additive manufacturing, membranes, materials for energy systems, batteries, photocatalysis. Characterization- Analytical, microscopy, scanning probes, nanoscopic, optical, electrical, magnetic, acoustic, spectroscopic, diffraction. Novel Materials - Micro and nanostructures (nanowires, nanotubes, nanoparticles), nanocomposites, thin films, superlattices, quantum dots. Processing- Crystal growth, thin film processing, sol-gel processing, solvothermal processing, mechanical processing, assembly, nanocrystalline processing, sustainable/green processing routes. Properties- Mechanical, magnetic, optical, electrical, ferroelectric/piezoelectric, thermal, interfacial, transport, thermodynamic, photoelectrochemical, photocatalytic, thermoelectric, biological, electrochemical. Synthesis- Quenching, solid state, mechano-chemical, solidification, solution synthesis, vapor deposition, high pressure, explosive, MOVPE and LPE epitaxial processes, single crystal growth. Machine Learning/Artificial Intelligence- Materials discovery, design of materials and digital materials science.

Types of Contribution
Short Communications (Letters) are intended as brief reports of significant, original and timely research results on the science, applications and processing of materials which warrant rapid publication. In considering a manuscript for publication, particular attention will be given to the originality of the research, the desirability of speedy publication, the clarity of the presentation and the validity of the conclusions. There is a strict four-page limit to printed articles. Manuscripts must not exceed 2000 words plus four figures or tables. The word count includes everything: the title, authors, affiliations, abstract, keywords, body of the manuscript, acknowledgements, references, figure captions, etc. The maximum number of figures or tables is strictly limited to four items as total (figures and/or tables). If more than 4 figures are used, the manuscript will be rejected. The manuscript submitted for review should not exceed 8 pages (including title, abstract, references, figures, tables and figure captions). Short Communications need to report a concise but exhaustive Material and methods section included in the main text.

Featured Letters: A Call for Papers
Featured Letters are invited only contributions to Materials Letters. They are short but authoritative reports of the state-of-the-art in a scientific field, without becoming as exhaustive as classical review papers. These articles still maintain the rapid communication character of Materials Letters, 4 to 6 printed pages with emphasis on recent findings and breakthroughs, but they are intended to also provide a concise and critical overview of the scientific field. The authors’ recent work is highlighted (relevant important prior-contributions, by the authors or others, should be included and discussed in context). We are currently inviting Featured Letters from within the following fields: Organic electronics, Organic semiconductors Advanced Piezoelectrics/ferroelectrics Advanced Magnetic materials Nano-biomaterials Materials for Alternative Energy applications (nanomaterials, dielectrics, photocatalytic materials, PV, LEDs, etc.) Metamaterials Sustainable Materials Materials
with novel properties (ionic liquids, quantum and confined structures, etc.) Novel nanoscale carbonaceous materials (CNT, graphene, etc.) Evolution and stability of the microstructure of nanocrystalline materials

Featured Letters can include authors' perspectives: i.e., unsolved problems and tentative conclusions are welcome, when properly identified, authors' outlook on new opportunities and challenges, as appropriate, are also welcome in the conclusions, etc. Featured Letters enjoy benefits, such as: Guarantee rapid publication, as soon as finalized in production Free color in print The new section will be promoted via Elsevier marketing channels

If you believe you can contribute such a manuscript, you can contact the editor, A.R. Boccaccini, to suggest a topic for a Featured Letter.

Note: Featured Letters manuscripts must not exceed 4000 words plus 5 figures/table. This includes the title, authors, affiliations, abstract, keywords, body of the manuscript, acknowledgements and references.

Contact Details
Authors should submit their article via the online submission system. Authors will be asked to choose the Editor whose subject area is most closely aligned to the subject of their article. Each Editor's specialties are given below. To expedite the review process, authors will also be prompted to nominate 3 potential referees, who are not at the same institute, to serve as potential referees. Contact details are helpful.

Principal Editors
Prof. Aldo Boccaccini, Editor in chief - Biomaterials, Glasses and Ceramics, Materials Processing, Porous Materials, Biocomposites, Mechanical Properties
Prof. Raymundo Arroyave - Computational Materials Science, Thermodynamics and Phase Stability, Kinetics, Data-enabled Materials Discovery and Design, Metals, Alloys, Ceramics
Prof. Michael Carboni - Porous and Crystalline Materials, Polymers, Metal-Organic Frameworks, Biomaterials, Electrode Materials for Battery, Thin Films
Prof. Xanthippi Chatzistavrou - Bioactive Materials for tissue engineering
Prof. Olivia Graeve - Materials processing, Ceramics, Materials in Extreme Environments, Luminescent Materials, Sensors
Prof. Junichi Hojo - Nano-composites, Composites, Sol-gel preparation
Prof. Vladislav Kharton - Materials for Electrochemical Technologies, Ceramics, Oxide Materials, Diffusion, Electrical Properties, Phase Diagrams
Prof. Junichi Hojo - Ceramics, Nanoparticle, Nanocomposite, Porous material, Zeolite, Ecofriendly material, Liquid phase synthesis, Sintering
Prof. Sandra E. Rodil - Thin films synthesis, spectroscopic characterization of materials, Surface modification for biomedical applications, mechanical-tribological properties
Prof. Flavio Leandro de Souza - Synthesis of metal and complex oxide nanostructure, Thin and ultra thin films for water splitting process via photo-(catalysis-and-electrocatalysis), Study of charge dynamics mechanism, Nanostructure surface and interface
Prof. Boris Straumal - Grain boundaries, phase transformations, diffusion, thermodynamics
Prof. Arthur Willoughby - Semiconductor/Electronic Materials, Polymers
Prof. Jenn-Ming Yang - Metallic Alloys, Ceramics, Composites, High Temperature Materials, Mechanical Behavior, Material Processing
Prof. Yufeng Zheng - Metallic Biomaterials, Magnesium alloys, Fe alloys, Zinc alloys, Ti alloys, Shape Memory Alloys, Biodegradable Metals

Submission checklist
You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

Ensure that the following items are present:

One author has been designated as the corresponding author with contact details:
• E-mail address
• Full postal address
All necessary files have been uploaded:

*Manuscript:*
- Include keywords
- All figures (include relevant captions)
- All tables (including titles, description, footnotes)
- Ensure all figure and table citations in the text match the files provided
- Indicate clearly if color should be used for any figures in print

*Graphical Abstracts / Highlights files* (where applicable)

*Supplemental files* (where applicable)

Further considerations
- Manuscript has been 'spell checked' and 'grammar checked'
- All references mentioned in the Reference List are cited in the text, and vice versa
- Permission has been obtained for use of copyrighted material from other sources (including the Internet)
- A competing interests statement is provided, even if the authors have no competing interests to declare
- Journal policies detailed in this guide have been reviewed
- Referee suggestions and contact details provided, based on journal requirements

For further information, visit our Support Center.

**BEFORE YOU BEGIN**

**Online Submission**

* Authors must submit their articles using the secure online submission system at [https://www.editorialmanager.com/mlblue/default.aspx](https://www.editorialmanager.com/mlblue/default.aspx).

To facilitate rapid publication, it is essential to precisely follow these instructions. Failure to do so can result in a delay or rejection of the manuscript for publication.

To ensure a timely review you will be required to answer the following questions before your paper will be considered for review.

- Has your paper, or part of your paper, been published before, or is it currently submitted for review to another journal?
  
  Yes / No
  
  (If yes, then do not submit your paper to Materials Letters.)

- Is the total number of words in the manuscript including the title, authors, affiliations, abstract, keywords, body of the manuscript, acknowledgements, references and figure captions less than 2000?
  
  Yes / No
  
  (If greater than 2000, please reduce the number of words.)

- Is the number of figures greater than 5?
  
  Yes / No
  
  (If yes, then the paper will automatically be rejected.)

- Are the x-ray diffraction patterns indexed?
  
  Yes / No
  
  X-ray diffraction patterns should be indexed. (If your x-ray patterns are not indexed, the paper will be rejected for publication.)

- Do the micrographs have professional quality scale markers?
  
  Yes / No
  
  Professional scale bars should be added to micrographs; the bar included in the micrograph printout is not sufficient.
  
  (Please replace the black bar on SEM & TEM micrographs with a professional quality scale marker.)

**Ethics in publishing**

Please see our information on Ethics in publishing.
Studies in humans and animals

If the work involves the use of human subjects, the author should ensure that the work described has been carried out in accordance with The Code of Ethics of the World Medical Association (Declaration of Helsinki) for experiments involving humans. The manuscript should be in line with the Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals and aim for the inclusion of representative human populations (sex, age and ethnicity) as per those recommendations. The terms sex and gender should be used correctly.

Authors should include a statement in the manuscript that informed consent was obtained for experimentation with human subjects. The privacy rights of human subjects must always be observed.

All animal experiments should comply with the ARRIVE guidelines and should be carried out in accordance with the U.K. Animals (Scientific Procedures) Act, 1986 and associated guidelines, EU Directive 2010/63/EU for animal experiments, or the National Research Council's Guide for the Care and Use of Laboratory Animals and the authors should clearly indicate in the manuscript that such guidelines have been followed. The sex of animals must be indicated, and where appropriate, the influence (or association) of sex on the results of the study.

Declaration of competing interest

Corresponding authors, on behalf of all the authors of a submission, must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. All authors, including those without competing interests to declare, should provide the relevant information to the corresponding author (which, where relevant, may specify they have nothing to declare). Corresponding authors should then use this tool to create a shared statement and upload to the submission system at the Attach Files step. Please do not convert the .docx template to another file type. Author signatures are not required.

Declaration of generative AI in scientific writing

The below guidance only refers to the writing process, and not to the use of AI tools to analyse and draw insights from data as part of the research process.

Where authors use generative artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should only use these technologies to improve readability and language. Applying the technology should be done with human oversight and control, and authors should carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or biased. AI and AI-assisted technologies should not be listed as an author or co-author, or be cited as an author. Authorship implies responsibilities and tasks that can only be attributed to and performed by humans, as outlined in Elsevier’s AI policy for authors.

Authors should disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

Disclosure instructions

Authors must disclose the use of generative AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in the core manuscript file, before the References list. The statement should be placed in a new section entitled 'Declaration of Generative AI and AI-assisted technologies in the writing process'.

Statement: During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.

This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, there is no need to add a statement.
Submission declaration and verification
Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify compliance, your article may be checked by Crossref Similarity Check and other originality or duplicate checking software.

Preprints
Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see 'Multiple, redundant or concurrent publication' for more information).

Preprint posting on SSRN
In support of Open Science, this journal offers its authors a free preprint posting service. Preprints provide early registration and dissemination of your research, which facilitates early citations and collaboration.

During submission to Editorial Manager, you can choose to release your manuscript publicly as a preprint on the preprint server SSRN once it enters peer-review with the journal. Your choice will have no effect on the editorial process or outcome with the journal. Please note that the corresponding author is expected to seek approval from all co-authors before agreeing to release the manuscript publicly on SSRN.

You will be notified via email when your preprint is posted online and a Digital Object Identifier (DOI) is assigned. Your preprint will remain globally available free to read whether the journal accepts or rejects your manuscript.

For more information about posting to SSRN, please consult the SSRN Terms of Use and FAQs.

Use of inclusive language
Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns (“clinicians, patients/clients”) as default/wherever possible to avoid using “he, she,” or “he/she.” We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. When coding terminology is used, we recommend to avoid offensive or exclusionary terms such as "master", "slave", "blacklist" and "whitelist". We suggest using alternatives that are more appropriate and (self-) explanatory such as "primary", "secondary", "blocklist" and "allowlist". These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

Reporting sex- and gender-based analyses
Reporting guidance
For research involving or pertaining to humans, animals or eukaryotic cells, investigators should integrate sex and gender-based analyses (SGBA) into their research design according to funder/sponsor requirements and best practices within a field. Authors should address the sex and/or gender dimensions of their research in their article. In cases where they cannot, they should discuss this as a limitation to their research's generalizability. Importantly, authors should explicitly state what definitions of sex and/or gender they are applying to enhance the precision, rigor and reproducibility of their research and to avoid ambiguity or conflation of terms and the constructs to which they refer (see Definitions section below). Authors can refer to the Sex and Gender Equity in Research (SAGER) guidelines and the SAGER guidelines checklist. These offer systematic approaches to the use and editorial review of sex and gender information in study design, data analysis, outcome reporting and research interpretation - however, please note there is no single, universally agreed-upon set of guidelines for defining sex and gender.
Definitions
Sex generally refers to a set of biological attributes that are associated with physical and physiological features (e.g., chromosomal genotype, hormonal levels, internal and external anatomy). A binary sex categorization (male/female) is usually designated at birth ("sex assigned at birth"), most often based solely on the visible external anatomy of a newborn. Gender generally refers to socially constructed roles, behaviors, and identities of women, men and gender-diverse people that occur in a historical and cultural context and may vary across societies and over time. Gender influences how people view themselves and each other, how they behave and interact and how power is distributed in society. Sex and gender are often incorrectly portrayed as binary (female/male or woman/man) and unchanging whereas these constructs actually exist along a spectrum and include additional sex categorizations and gender identities such as people who are intersex/have differences of sex development (DSD) or identify as non-binary. Moreover, the terms "sex" and "gender" can be ambiguous—thus it is important for authors to define the manner in which they are used. In addition to this definition guidance and the SAGER guidelines, the resources on this page offer further insight around sex and gender in research studies.

Author contributions
For transparency, we require corresponding authors to provide co-author contributions to the manuscript using the relevant CRediT roles. The CRediT taxonomy includes 14 different roles describing each contributor’s specific contribution to the scholarly output. The roles are: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; and Writing - review & editing. Note that not all roles may apply to every manuscript, and authors may have contributed through multiple roles. More details and an example.

Changes to authorship
Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed. Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

Article transfer service
This journal uses the Elsevier Article Transfer Service to find the best home for your manuscript. This means that if an editor feels your manuscript is more suitable for an alternative journal, you might be asked to consider transferring the manuscript to such a journal. The recommendation might be provided by a Journal Editor, a dedicated Scientific Managing Editor, a tool assisted recommendation, or a combination. If you agree, your manuscript will be transferred, though you will have the opportunity to make changes to the manuscript before the submission is complete. Please note that your manuscript will be independently reviewed by the new journal. More information.

Copyright
Upon acceptance of an article, authors will be asked to complete a 'Journal Publishing Agreement' (see more information on this). An e-mail will be sent to the corresponding author confirming receipt of the manuscript together with a 'Journal Publishing Agreement' form or a link to the online version of this agreement.

Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution and for all other derivative works, including compilations and translations. If excerpts from other copyrighted works are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has preprinted forms for use by authors in these cases.
Elsevier supports responsible sharing
Find out how you can share your research published in Elsevier journals.

Role of the funding source
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement, it is recommended to state this.

Open access
Please visit our Open Access page for more information about open access publishing in this journal.

Elsevier Researcher Academy
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

Language (usage and editing services)
Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the Language Editing service available from Elsevier's Language Services.

Submission
Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

Suggesting reviewers
Please submit the names and institutional e-mail addresses of several potential reviewers.

You should not suggest reviewers who are colleagues, or who have co-authored or collaborated with you during the last three years. Editors do not invite reviewers who have potential competing interests with the authors. Further, in order to provide a broad and balanced assessment of the work, and ensure scientific rigor, please suggest diverse candidate reviewers who are located in different countries/regions from the author group. Also consider other diversity attributes e.g. gender, race and ethnicity, career stage, etc. Finally, you should not include existing members of the journal's editorial team, of whom the journal are already aware.

Note: the editor decides whether or not to invite your suggested reviewers.

PREPARATION
Queries
For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

Peer review
This journal operates a single anonymized review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal's usual procedures, with peer review handled independently of the relevant editor and their research groups. More information on types of peer review.
Use of word processing software
It is important that the file be saved in the native format of the word processor used. The text should be in single-column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. In particular, do not use the word processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc. When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). Note that source files of figures, tables and text graphics will be required whether or not you embed your figures in the text. See also the section on Electronic artwork.
To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

Article structure
Follow this order when submitting manuscripts: Title, Authors, Affiliations, Abstract, Keywords, Main text, Acknowledgements, Appendix, References, Figure Captions and then Tables. For submission via the website you are requested to import low-resolution images into the article at the approximate location you wish them to appear. Thus the PDF which is created for refereeing purposes will contain all necessary information. In addition you will be asked to separately upload high quality images. Collate acknowledgements in a separate section at the end of the article and do not include them on the title page, as a footnote to the title or otherwise.

Text Layout
Use double spacing and wide (3 cm) margins. (Avoid full justification, i.e., do not use a constant right-hand margin.) Ensure that each new paragraph is clearly indicated. Present tables, figures and figure legends at the point they will appear in the manuscript. If possible, consult a recent issue of the journal to become familiar with layout and conventions. Number all pages consecutively, use 12 or 10 pt font size and standard fonts.

Subdivision - numbered sections
Divide your article into clearly defined and numbered sections. Subsections should be numbered 1.1 (then 1.1.1, 1.1.2, ...), 1.2, etc. (the abstract is not included in section numbering). Use this numbering also for internal cross-referencing: do not just refer to 'the text'. Any subsection may be given a brief heading. Each heading should appear on its own separate line.

Introduction
State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results.

Material and methods
Provide sufficient details to allow the work to be reproduced by an independent researcher. Methods that are already published should be summarized, and indicated by a reference. If quoting directly from a previously published method, use quotation marks and also cite the source. Any modifications to existing methods should also be described.

Theory/calculation
A Theory section should extend, not repeat, the background to the article already dealt with in the Introduction and lay the foundation for further work. In contrast, a Calculation section represents a practical development from a theoretical basis.

Results
Results should be clear and concise.

Discussion
This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.

Conclusions
The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.
Essential title page information

• **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.

• **Author names and affiliations.** Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. You can add your name between parentheses in your own script behind the English transliteration. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author’s name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.

• **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. This responsibility includes answering any future queries about Methodology and Materials. **Ensure that the e-mail address is given and that contact details are kept up to date by the corresponding author.**

• **Present/permanent address.** If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

Highlights

Highlights are mandatory for this journal as they help increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

Abstract

A self-contained abstract of 100 to 200 words, outlining in a single paragraph the aims, scope and conclusions of the paper must be supplied. Do not list the analytical equipment (e.g. SEM, XRD, TEM) used unless it is critical to the meaning. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separate from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, they must be cited in full, without reference to the reference list. Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

Graphical abstract

Although a graphical abstract is optional, its use is encouraged as it draws more attention to the online article. The graphical abstract should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: Please provide an image with a minimum of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. You can view Example Graphical Abstracts on our information site.

Keywords

Immediately after the abstract, provide a maximum of 6 keywords, using American spelling and avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

Acknowledgements

Collate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

Formatting of funding sources

List funding sources in this standard way to facilitate compliance to funder's requirements:
Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, it is recommended to include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Nomenclature and units
Follow internationally accepted rules and conventions: use the international system of units (SI). If other quantities are mentioned, give their equivalent in SI. You are urged to consult IUGS: Nomenclature for geological time scales/rock names for further information.

Math formulae
Please submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., X/Y. In principle, variables are to be presented in italics. Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).

Artwork
Electronic artwork
General points
• Make sure you use uniform lettering and sizing of your original artwork.
• Embed the used fonts if the application provides that option.
• Aim to use the following fonts in your illustrations: Arial, Courier, Times New Roman, Symbol, or use fonts that look similar.
• Number the illustrations according to their sequence in the text.
• Use a logical naming convention for your artwork files.
• Provide captions to illustrations separately.
• Size the illustrations close to the desired dimensions of the published version.
• Submit each illustration as a separate file.
• Ensure that color images are accessible to all, including those with impaired color vision.

A detailed guide on electronic artwork is available.

You are urged to visit this site; some excerpts from the detailed information are given here.

Formats
If your electronic artwork is created in a Microsoft Office application (Word, PowerPoint, Excel) then please supply 'as is' in the native document format.

Regardless of the application used other than Microsoft Office, when your electronic artwork is finalized, please 'Save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):

EPS (or PDF): Vector drawings, embed all used fonts.
TIFF (or JPEG): Color or grayscale photographs (halftones), keep to a minimum of 300 dpi.
TIFF (or JPEG): Bitmapped (pure black & white pixels) line drawings, keep to a minimum of 1000 dpi.
TIFF (or JPEG): Combinations bitmapped line/half-tone (color or grayscale), keep to a minimum of 500 dpi.

Please do not:
• Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); these typically have a low number of pixels and limited set of colors;
• Supply files that are too low in resolution;
• Submit graphics that are disproportionally large for the content.
Color artwork
Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF) or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these figures will appear in color online (e.g., ScienceDirect and other sites) in addition to color reproduction in print. Further information on the preparation of electronic artwork.

Figure captions
Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

Tables
Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

References
Citation in text
Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.

Web references
As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

Data references
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

Preprint references
Where a preprint has subsequently become available as a peer-reviewed publication, the formal publication should be used as the reference. If there are preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published, these may be referenced. Preprints should be clearly marked as such, for example by including the word preprint, or the name of the preprint server, as part of the reference. The preprint DOI should also be provided.

References in a special issue
Please ensure that the words 'this issue' are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

Reference management software
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal's style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.
Reference style
Text: Indicate references by number(s) in square brackets in line with the text. The actual authors can be referred to, but the reference number(s) must always be given.
Example: '..... as demonstrated [3,6]. Barnaby and Jones [8] obtained a different result ....'
List: Number the references (numbers in square brackets) in the list in the order in which they appear in the text.
Examples:
Reference to a journal publication:
Reference to a journal publication with an article number:
Reference to a book:
Reference to a chapter in an edited book:
Reference to a website:
Reference to a dataset:
Reference to software:

Journal abbreviations source
Journal names should be abbreviated according to the List of Title Word Abbreviations.

Video
Elsevier accepts video material and animation sequences to support and enhance your scientific research. Authors who have video or animation files that they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table by referring to the video or animation content and noting in the body text where it should be placed. All submitted files should be properly labeled so that they directly relate to the video file's content. In order to ensure that your video or animation material is directly usable, please provide the file in one of our recommended file formats with a preferred maximum size of 150 MB per file, 1 GB in total. Video and animation files supplied will be published online in the electronic version of your article in Elsevier Web products, including ScienceDirect. Please supply 'stills' with your files: you can choose any frame from the video or animation or make a separate image. These will be used instead of standard icons and will personalize the link to your video data. For more detailed instructions please visit our video instruction pages. Note: since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and the print version for the portions of the article that refer to this content.

Supplementary data
Figures and text submitted as supplementary material must contain only material that is supportive of the main text, and not material that is inherent to the essential meaning of the article. Papers with reference to supplementary material, which the Editors find necessary to include as main text, will be sent back to authors.
Elsevier accepts electronic supplementary material to support and enhance your scientific research. Supplementary files offer the author additional possibilities to publish supporting applications, high-resolution images, background datasets, sound clips and more. Supplementary files supplied will be published online alongside the electronic version of your article in Elsevier Web products, including ScienceDirect: https://www.sciencedirect.com. In order to ensure that your submitted material is directly usable, please provide the data in one of our recommended file formats. Authors should
submit the material in electronic format together with the article and supply a concise and descriptive caption for each file. For more detailed instructions please visit our artwork instruction pages at https://www.elsevier.com/artworkinstructions.

**Research data**
This journal requires and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings, which may also include software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. When sharing data in one of these ways, you are expected to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

**Data linking**
If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.

For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.

In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

**Mendeley Data**
This journal supports Mendeley Data, enabling you to deposit any research data (including raw and processed data, video, code, software, algorithms, protocols, and methods) associated with your manuscript in a free-to-use, open access repository. Before submitting your article, you can deposit the relevant datasets to Mendeley Data. Please include the DOI of the deposited dataset(s) in your main manuscript file. The datasets will be listed and directly accessible to readers next to your published article online.

For more information, visit the Mendeley Data for journals page.

**Research Elements**
This journal enables you to publish research objects related to your original research – such as data, methods, protocols, software and hardware – as an additional paper in a Research Elements journal.

Research Elements is a suite of peer-reviewed, open access journals which make your research objects findable, accessible and reusable. Articles place research objects into context by providing detailed descriptions of objects and their application, and linking to the associated original research articles. Research Elements articles can be prepared by you, or by one of your collaborators.

During submission, you will be alerted to the opportunity to prepare and submit a manuscript to one of the Research Elements journals.

More information can be found on the Research Elements page.
Data statement
To foster transparency, we require you to state the availability of your data in your submission if your data is unavailable to access or unsuitable to post. This may also be a requirement of your funding body or institution. You will have the opportunity to provide a data statement during the submission process. The statement will appear with your published article on ScienceDirect. For more information, visit the Data Statement page.

AFTER ACCEPTANCE

Online proof correction
To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Corresponding authors will receive an e-mail with a link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors. If preferred, you can still choose to annotate and upload your edits on the PDF version. All instructions for proofing will be given in the e-mail we send to authors, including alternative methods to the online version and PDF.

We will do everything possible to get your article published quickly and accurately. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. It is important to ensure that all corrections are sent back to us in one communication. Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

Offprints
The corresponding author will, at no cost, receive a customized Share Link providing 50 days free access to the final published version of the article on ScienceDirect. The Share Link can be used for sharing the article via any communication channel, including email and social media. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Corresponding authors who have published their article gold open access do not receive a Share Link as their final published version of the article is available open access on ScienceDirect and can be shared through the article DOI link.
