DESCRIPTION

Surface and Coatings Technology is an international archival journal publishing scientific papers on significant developments in surface and interface engineering to modify and improve the surface properties of materials for protection in demanding contact conditions or aggressive environments, or for enhanced functional performance. Contributions range from original scientific articles concerned with fundamental and applied aspects of research or direct applications of metallic, inorganic, organic and composite coatings, to invited reviews of current technology in specific areas. Papers submitted to this journal are expected to be in line with the following aspects in processes, and properties/performance:

A. Processes: Physical and chemical vapour deposition techniques, thermal and plasma spraying, surface modification by directed energy techniques such as ion, electron and laser beams, thermo-chemical treatment, wet chemical and electrochemical processes such as plating, sol-gel coating, anodization, plasma electrolytic oxidation, etc., but excluding painting.

B. Properties/performance: friction performance, wear resistance (e.g., abrasion, erosion, fretting, etc), corrosion and oxidation resistance, thermal protection, diffusion resistance, hydrophilicity/hydrophobicity, and properties relevant to smart materials behaviour and enhanced multifunctional performance for environmental, energy and medical applications, but excluding device aspects.

Articles must go beyond the technical recipe format and gain substantial new understanding and insight based on detailed characterization of coatings and processes. Experimental papers should provide complete information on the process parameters and an appropriate microstructural characterization. Also, papers which include test data should provide full details of the test equipment and parameters. Such papers should report on the synthesis-characterization-properties-performance relationships.

Manuscripts must be written in good English and contain a balanced and up-to-date reference list formatted according to the guide-for-authors.

Note to authors:
In order to be considered for publication, the Covering Letter with your paper should clearly explain the novelty and originality of your research and its scientific contribution beyond previously published papers. If not, your submission will not be considered for publication and will not be sent out for peer-review.
Benefits to authors
We also provide many author benefits, such as free PDFs, a liberal copyright policy, special discounts on Elsevier publications and much more. Please click here for more information on our author services.

Please see our Guide for Authors for information on article submission. If you require any further information or help, please visit our Support Center

AUDIENCE
Chemists, physicists, materials scientists, metallurgists, electrochemists, engineers, tribologists

EDITORIAL BOARD

Editor-in-Chief
Allan Matthews, The University of Manchester, M13 9PL, Manchester, United Kingdom
Surface Coatings, Tribology

Editors
Grégory Abadias, University of Poitiers, 86073, Poitiers, France
Thin film growth; Stress evolution and stress measurement in thin films; Multilayer and nanocomposite films; Mechanical Properties; Nitrides; Hard coatings; Structure and properties of Interfaces
Samir Aouadi, University of North Texas, Department of Materials Science and Engineering, 1155 Union Circle #305310, 76203-5017, Denton, Texas, United States of America
Surface Engineering, Hard Coatings, Tribology, High Temperature Ceramics, Self-Healing Ceramics
Sonia Patricia Brühl, National Technological University Conception of Uruguay Regional Faculty, 3260, Concepción del Uruguay, Argentina
Plasma surface engineering, CVD and PVD protective coatings, Plasma diffusion treatments, Wear testing
Vanessa de Freitas Cunha Lins, Universidade Federal de Minas Gerais, Chemical Engineering, Department, Corrosion and Surface Engineering Laboratory, Belo Horizonte, Minas Gerais, Brazil
Corrosion, Electrodeposition, High-temperature oxidation, Electrochemical tests
HC Man, The Hong Kong Polytechnic University, Department of Industrial and Systems Engineering, Hung Hom, Hong Kong, Hong Kong
Ivan Petrov, University of Illinois Urbana-Champaign, Department of Materials Science and Engineering, 104 S. Goodwin, 61801-2920, Urbana, Illinois, United States of America
Sputter deposition; Materials characterization; Epitaxy; Transition metal nitrides; Hard coatings
Claus Rebholz, University of Cyprus, Department of Mechanical & Manufacturing Engineering, 75 Kallipoleos Street, 1678, Lefkosia, Cyprus
Surface engineering technologies; Thin films and coatings; Tribological coatings; Nanostructured materials; Nanoscale manufacturing technologies; Laser materials processing

Sheik Shibli, University of Kerala, Department of Chemistry, 695 581, Trivandrum, India
Hot-dip and galvanised coatings, Electroless and composite coatings, Electrocatalytic coatings, Soft metal / alloy coatings including Al and Zn alloy

Managing Editor
David Matthews, University of Twente, Faculty of Engineering Technology, Enschede, Netherlands

Editorial Board
Arvind Agarwal, Florida International University, Miami, Florida, United States of America
Materials Processing, Nanocomposites, Nanomechanics, Biomaterials

Jelena Bajat, University of Belgrade, Faculty of Technology and Metallurgy, Beograd, Serbia
Electrodeposition, Coatings, Corrosion, Adhesion

Babak Bakhit, University of Cambridge, Department of Engineering, Cambridge, United Kingdom
Materials science, Thin films growth, Magnetron sputtering, Ion-solid interactions, XPS, Materials characterization, Memory technology

Hana Baránková, Uppsala University, Uppsala, Sweden
Atmospheric pressure plasma, sputtering, arcs, hollow cathodes, plasma in liquids

Zoe Barber, University of Cambridge, Department of Materials Science and Metallurgy, Cambridge, England, United Kingdom
device materials, Thin film fabrication and characterization, sputter deposition, coatings

Kirsten Bobzin, RWTH Aachen University Institute of Surface Engineering, Aachen, Germany

Ludmila Boinovich, Frumkin Institute of Physical Chemistry and Electrochemistry RAS, Moskva, Russian Federation
Currently, professor L. Boinovich is pursuing the study of fundamentals of surface forces, wetting, development, and application of materials, with the emphasis on the materials with extreme wettability, surface phenomena, functional coatings

Giovanni Boielli, University of Modena and Reggio Emilia, Modena, Italy
Coatings, Thermal spray, PVD, CVD, Tribology

Ivan Enrique Campos-Silva, National Polytechnic Institute, Department of Mechanical Engineering, Ciudad de México, Mexico
In general thermodynamics, kinetics and mechanics of solid state phase transformations in metallic materials, mostly steels and non-ferrous alloys. Extensive experience in materials characterisation with reflected light and electron microscopy, X-ray diffraction as well as nanoindentation, scratch tests, corrosion and different wear tests. More specifically, gas-metal interactions as a basis for understanding and optimizing thermochemical surface engineering, corrosion and tribology. Thermodynamic and kinetic materials modelling in relation to gas-metal interaction (surface engineering).

Richard Chromik, Université McGill, Montréal, Quebec, Canada
Surface engineering, Cold spray, Tribology

Paul Chu, City University of Hong Kong, Hong Kong, Hong Kong
Plasma science and engineering, Surface engineering of functional materials, Biomaterials and nanobiology, Energy and sensor materials, Nanostructured thin films and interfaces

Yip-Wah Chung, Northwestern University, Evanston, Illinois, United States of America
Surface physics and chemistry; Thin films and hard coatings; Design of lubricant additives; Design and development of high-performance alloys

Jeff Th. M. DeHosson, University of Groningen Zernike Institute for Advanced Materials, Groningen, Netherlands
Laser surface processes, PVD coatings, Microscopy, Nanocomposites, Friction-wear

Christophe Donnet, Jean Monnet University, St Etienne, France
Surface science and technology, Coatings, Carbon-based films, Graphene, Pulsed laser ablation, Tribology of solid lubricants

Martin Fenker, fem Research Institute for Precious Metals and Metal Chemistry, Schwäbisch Gmünd, Germany
PVD, HiPIMS, IBAD, Ion implantation, PACVD, Corrosion, Tribology, Decorative coatings, Antibacterial, DLC, Plasma characterisation

Carlos Figueroa, University of Caxias do Sul, CAXIAS DO SUL, Brazil
Photo-nanotribology, Fundamental physical understanding of friction forces, Physical chemistry of interfaces, Adhesion forces at solid-solid interfaces

Santiago J. Garcia, Delft University of Technology, Faculty of Aerospace Engineering, Delft, Netherlands

Mario Guagliano, Polytechnic of Milan, Milano, Italy
Mechanical Engineering

Marcus Hans, RWTH Aachen University, Aachen, Germany
Atom Probe Tomography, Thin Films, Thermal Stability, Oxidation Resistance, Chemical Composition
Robert Heimann, Goerlitz, Germany
Biomaterials, Coatings, Archeometry

Chi Tat Kwok, University of Macau, Taipa, Macao
Laser Surface Modification, Corrosion, Wear, Friction Stir Processing

Jyh-Wei Lee, Ming Chi University of Technology, Department of Materials Engineering, Taipei, Taiwan
Surface engineering (PVD coating, Chromizing, Aluminizing, Electroless plating, Plasma electrolytic oxidation), Nanomechanical properties evaluation techniques, AFM related techniques, Microstructure analysis, Corrosion

Xiao Peng Lu, Northeastern University, Shenyang, China
Corrosion and protection, Functional coatings, Biodegradable material, Plasma electrolytic oxidation, Corrosion inhibitor

Luca Lusvarghi, University of Modena and Reggio Emilia, Department of Engineering Enzo Ferrari, Modena, Italy
Thermal spraying, Low friction films/solid lubricants by vacuum processes, Tribology, Corrosion protection, Microscopic characterization (FEG-SEM, FIB)

Darina Manova, Leibniz Institute for Surface Modification eV, Leipzig, Germany
In-situ XRD measurements during nitriding and ion beam etching, low energy ion implantation, Plasma immersion ion implantation, Nitriding stainless steel, Surface modification, Thin films, Sputtering of bulk materials and thin films

Phil Martin, CSIRO Australian Manufacturing and Materials Precinct, Clayton, Australia

Paul Mayrhofer, TU Wien University, Wien, Austria
Physical vapor deposition, hard coatings, thermal stability, mechanical properties, oxidation resistance, nitrides, carbides, borides, superlattices, density functional theory, materials science

Christian Mitterer, University of Mining Leoben, Leoben, Austria
Surface engineering; Sputter deposition; Cathodic arc evaporation; Nitride, carbide, boride, oxide, metal and composite coatings

Fátilma Montemor, University of Lisbon Higher Technical Institute, Lisboa, Portugal
Smart self-helging coatings for corrosion protection, Coatings for surface functionalization of metallic and non-metallic materials, Electrochemically active conductive coatings for energy storage applications, Functional additives for extending concrete and reinforcing steel lifetime, Corrosion science

Ana Sofia d'Oliveira, Federal University of Parana, CURITIBA, Brazil
Plasma Transferred Arc Hardfacing, Pack cementation/Pack aluminization, Ni based alloys, Co-based alloys, Microstructure High temperature stability (microstructure stability, oxidation)

Joerg Patscheider, Evatec Process Systems AG, Trübbach, Switzerland
Thin Films; nitrides, carbides, DLC, oxides; Low -pressure plasmas; Nanostructured thin films; Optically transparent coatings, thin films for electronic applications; Surface and structural analysis (XPS, AES, XRD, Thin Films, Materials Science, HiPIMS, PEALD

Lech Pawlowski, Limoges University, Limoges, France

Bogan Podgornik, Institute of Metals and Technology, Ljubljana, Slovenia
surface engineering, tribology, contact mechanics, characterization

Helmut Riedl, TU Wien University, Wien, Austria
Protective Coatings, Borides, Oxidation, Micro-mechanical Testing, Carbides, DFT, UHTC

Gobinda C. Saha, University of New Brunswick, Fredericton, New Brunswick, Canada
Nanostructured particle synthesis, Particle fluidization, Cold spraying, Biocomposites, Solid mechanics

Nina Schalk, University of Mining, Department of Materials Science, Leoben, Austria
Coatings, Thin films, Sputter deposition, Cathodic arc evaporation, Thin film characterization

Jochen Schneider, RWTH Aachen University, Aachen, Germany
Quantum Mechanically Guided Materials Design for Surface Engineering, Elastic properties, Phase stability, Interaction between coatings and ambient (atmosphere, work piece material)

Sam Zhang Shanyong, Nanyang Technological University, Singapore, Singapore

William Sproul, Carlsbad, California, United States of America
Sputtering, Reactive sputtering, Hard coatings, Nanocomposites Nanometer scale layered coatings

Michael Stueber, Karlsruhe Institute of Technology Institute for Applied Materials, Eggenstein-Leopoldshafen, Germany
Physical vapor deposition, Magnetron sputtering, Thin films, Multifunctional coatings, Wear resistant coatings

Xiubo Tian, Harbin Institute of Technology, Haerbin, China
Pulse power supply for vacuum coatings, Pulsed glow discharge, ionized magnetron sputtering, Vacuum arc, Plasma immersion and sheath, Hard coating based on PVD, Macro arc oxidation

Alenka Vesel, Jozef Stefan Institute, Ljubljana, Slovenia
Plasma technologies, Plasma surface modification, Surface functionalization, Polymers, Wettability

Véronique Vitry, University of Mons, Mons, Belgium
Electroless coatings, Plasma electrolytic oxidation, Tribology, Heat treatments, Nitriding, Metallic coating, Metal matrix composites
Frank Walsh, University of Southampton, Southampton, United Kingdom
Electrochemistry, electrochemical engineering, corrosion, surface finishing, PEM fuel cells, supercapacitors, redox flow batteries, nanostructured electrodes
Scott Walton, US Naval Research Laboratory, Washington, District of Columbia, United States of America
Plasma source development, Plasma diagnostics, Plasma-surface interactions, Plasma processing
Ming-Show Wong, National Dong Hwa University, Department of Materials Science and Engineering, Shoufeng, Taiwan
Thin Film, Photocatalysis, Hard coating, Transparent conducting oxides
Aleksey Yerokhin, The University of Manchester, Manchester, United Kingdom
Surface engineering, Electrolytic plasma processing, light alloys, Corrosion, Wear
Cheng Zhang, Huazhong University of Science and Technology, Wuhan, Hubei, China
Amorphous coating, Thermal spray, Laser additive manufacturing, Corrosion, Wear, High entropy alloy
Yu Zuo, Beijing University of Chemical Technology, Beijing, China
Anodic films, Chemical conversion films and coatings formetals and alloys, Electrochemical testing methods for coatings, Corrosion of metals.

Early Career Advisory Board Members
Mingwen Bai, Coventry University Institute for Future Transport and Cities, Coventry, United Kingdom
Digvijay Bhosale, Dr DY Patil Institute of Technology, Pune, India
Surface Engineering, Tribology, Machine Learning
Ihsan Çaha, International Iberian Nanotechnology Laboratory, Braga, Portugal
Surface modifications, Coatings, Corrosion, Tribocorrosion, Electron microscopy
Keke Chang, Chinese Academy of Sciences Ningbo Institute of Materials Technology and Engineering, Ningbo, China
Jie Cheng, China University of Mining and Technology Beijing Campus School of Mechanical Electronic and Information Engineering, Beijing, China
Zhenhua Chu, Shanghai Ocean University, Shanghai, China
corrosion resistance, wear resistance, thermal spraying technology, electrochemical techniques, electrochemical impedance spectroscopy
Chao-Qian Guo, Guangdong Academy of Sciences, Institute of New Materials, Guangzhou, China
Emile Haye, Université de Namur ASBL, Namur Institute of Structured Matter, Namur, Belgium
Christina Laura Kainz, Christian Doppler Laboratory “Advanced Coated Cutting Tools”, Montanuniversität, Austria
Hard coatings, chemical vapor deposition, physical vapor deposition, nanomechanical testing, thermal stability
Danilo Olzon-Dionysio, Federal University of Jequitinhonha and Mucuri Valleys, DIAMANTINA, Brazil
Synchrotron radiation, Mössbauer, Surface Science, Nitriding, Stainless Steel, XRD
Juliane Ribeiro da Cruz Alves, Stony Brook University, Stony Brook, United States of America
Thermal spray, High velocity oxygen fuel HVOF, Plasma transferred arc PTA, Laser processing, Arc welding, Steel alloys, Titanium alloys, Stainless steels, Cermets, Hardcoatings, Corrosion, Wear, Cavitation, Tensile
Antonio José Sánchez Egea, Technical University of Catalonia Polytechnic Higher School of Vilanova i la Geltru, Vilanova i la Geltru, Spain
Surface engineering, advanced manufacturing processes
Golnaz Taghavi Pourian Azar, Coventry University, Coventry, United Kingdom
Surface Technologies, PVD Coatings, Electroless Plating, Smart Textiles, Surface Analysis, Nanostructured Materials, Microstructure-Property Relationship in Materials
GUIDE FOR AUTHORS

Types of paper
• Original research articles
• Invited or contributed reviews on specific topics
• Technical notes for Current Industrial Practices section

Guide to Authors of Contributions with Biomaterials Content

Submission checklist
You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

Ensure that the following items are present:

One author has been designated as the corresponding author with contact details:
• E-mail address
• Full postal address

All necessary files have been uploaded:
Manuscript:
• Include keywords
• All figures (include relevant captions)
• All tables (including titles, description, footnotes)
• Ensure all figure and table citations in the text match the files provided
• Indicate clearly if color should be used for any figures in print

Graphical Abstracts / Highlights files (where applicable)
Supplemental files (where applicable)

Further considerations
• Manuscript has been 'spell checked' and 'grammar checked'
• All references mentioned in the Reference List are cited in the text, and vice versa
• Permission has been obtained for use of copyrighted material from other sources (including the Internet)
• A competing interests statement is provided, even if the authors have no competing interests to declare
• Journal policies detailed in this guide have been reviewed
• Referee suggestions and contact details provided, based on journal requirements

For further information, visit our Support Center.

BEFORE YOU BEGIN

Ethics in publishing
Please see our information on Ethics in publishing.

Declaration of competing interest
Corresponding authors, on behalf of all the authors of a submission, must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. All authors, including those without competing interests to declare, should provide the relevant information to the corresponding author (which, where relevant, may specify they have nothing to declare). Corresponding authors should then use this tool to create a shared statement and upload to the submission system at the Attach Files step. Please do not convert the .docx template to another file type. Author signatures are not required.

Declaration of generative AI in scientific writing
The below guidance only refers to the writing process, and not to the use of AI tools to analyse and draw insights from data as part of the research process.
Where authors use generative artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should only use these technologies to improve readability and language. Applying the technology should be done with human oversight and control, and authors should carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or biased. AI and AI-assisted technologies should not be listed as an author or co-author, or be cited as an author. Authorship implies responsibilities and tasks that can only be attributed to and performed by humans, as outlined in Elsevier’s AI policy for authors.

Authors should disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

**Disclosure instructions**

Authors must disclose the use of generative AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in the core manuscript file, before the References list. The statement should be placed in a new section entitled ‘Declaration of Generative AI and AI-assisted technologies in the writing process’.

*Statement: During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.*

This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, there is no need to add a statement.

**Submission declaration and verification**

Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify compliance, your article may be checked by Crossref Similarity Check and other originality or duplicate checking software.

**Preprints**

Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see 'Multiple, redundant or concurrent publication' for more information).

**Preprint posting on SSRN**

In support of Open Science, this journal offers its authors a free preprint posting service. Preprints provide early registration and dissemination of your research, which facilitates early citations and collaboration.

During submission to Editorial Manager, you can choose to release your manuscript publicly as a preprint on the preprint server SSRN once it enters peer-review with the journal. Your choice will have no effect on the editorial process or outcome with the journal. Please note that the corresponding author is expected to seek approval from all co-authors before agreeing to release the manuscript publicly on SSRN.

You will be notified via email when your preprint is posted online and a Digital Object Identifier (DOI) is assigned. Your preprint will remain globally available free to read whether the journal accepts or rejects your manuscript.

For more information about posting to SSRN, please consult the SSRN Terms of Use and FAQs.

**Use of inclusive language**

Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health.
condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns ("clinicians, patients/clients") as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. When coding terminology is used, we recommend to avoid offensive or exclusionary terms such as "master", "slave", "blacklist" and "whitelist". We suggest using alternatives that are more appropriate and (self-) explanatory such as "primary", "secondary", "blocklist" and "allowlist". These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

**Reporting sex- and gender-based analyses**

**Reporting guidance**

For research involving or pertaining to humans, animals or eukaryotic cells, investigators should integrate sex and gender-based analyses (SGBA) into their research design according to funder/sponsor requirements and best practices within a field. Authors should address the sex and/or gender dimensions of their research in their article. In cases where they cannot, they should discuss this as a limitation to their research's generalizability. Importantly, authors should explicitly state what definitions of sex and/or gender they are applying to enhance the precision, rigor and reproducibility of their research and to avoid ambiguity or conflation of terms and the constructs to which they refer (see Definitions section below). Authors can refer to the Sex and Gender Equity in Research (SAGER) guidelines and the SAGER guidelines checklist. These offer systematic approaches to the use and editorial review of sex and gender information in study design, data analysis, outcome reporting and research interpretation - however, please note there is no single, universally agreed-upon set of guidelines for defining sex and gender.

**Definitions**

Sex generally refers to a set of biological attributes that are associated with physical and physiological features (e.g., chromosomal genotype, hormonal levels, internal and external anatomy). A binary sex categorization (male/female) is usually designated at birth ("sex assigned at birth"), most often based solely on the visible external anatomy of a newborn. Gender generally refers to socially constructed roles, behaviors, and identities of women, men and gender-diverse people that occur in a historical and cultural context and may vary across societies and over time. Gender influences how people view themselves and each other, how they behave and interact and how power is distributed in society. Sex and gender are often incorrectly portrayed as binary (female/male or woman/man) and unchanging whereas these constructs actually exist along a spectrum and include additional sex categorizations and gender identities such as people who are intersex/have differences of sex development (DSD) or identify as non-binary. Moreover, the terms "sex" and "gender" can be ambiguous—thus it is important for authors to define the manner in which they are used. In addition to this definition guidance and the SAGER guidelines, the resources on this page offer further insight around sex and gender in research studies.

**Author contributions**

For transparency, we require corresponding authors to provide co-author contributions to the manuscript using the relevant CRediT roles. The CRediT taxonomy includes 14 different roles describing each contributor’s specific contribution to the scholarly output. The roles are: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; and Writing - review & editing. Note that not all roles may apply to every manuscript, and authors may have contributed through multiple roles. More details and an example.

**Changes to authorship**

Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed.
Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

Article transfer service
This journal uses the Elsevier Article Transfer Service to find the best home for your manuscript. This means that if an editor feels your manuscript is more suitable for an alternative journal, you might be asked to consider transferring the manuscript to such a journal. The recommendation might be provided by a Journal Editor, a dedicated Scientific Managing Editor, a tool assisted recommendation, or a combination. If you agree, your manuscript will be transferred, though you will have the opportunity to make changes to the manuscript before the submission is complete. Please note that your manuscript will be independently reviewed by the new journal. More information.

Copyright
Upon acceptance of an article, authors will be asked to complete a 'Journal Publishing Agreement' (see more information on this). An e-mail will be sent to the corresponding author confirming receipt of the manuscript together with a 'Journal Publishing Agreement' form or a link to the online version of this agreement.

Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution and for all other derivative works, including compilations and translations. If excerpts from other copyrighted works are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has preprinted forms for use by authors in these cases.

For gold open access articles: Upon acceptance of an article, authors will be asked to complete a 'License Agreement' (more information). Permitted third party reuse of gold open access articles is determined by the author's choice of user license.

Author rights
As an author you (or your employer or institution) have certain rights to reuse your work. More information.

Elsevier supports responsible sharing
Find out how you can share your research published in Elsevier journals.

Role of the funding source
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement, it is recommended to state this.

Open access
Please visit our Open Access page for more information.

Elsevier Researcher Academy
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

Language (usage and editing services)
Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the English Language Editing service available from Elsevier's Author Services.
**Submission**

Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

**Note to Authors**

In order to be considered for publication, the Covering Letter with your paper should clearly explain the novelty and originality of your research and its scientific contribution beyond previously published papers. If not, your submission will not be considered for publication and will not be sent out for peer-review.

**Referees**

Please submit, with the manuscript, the names, addresses and e-mail addresses of three potential referees. Please provide a reference to their most recent published article related to your submission and the homepage URL of the suggested referees in the comment box of this submission step. Potential referees should be independent international experts in the field of your research and be unconnected to the authors, having published peer-reviewed papers on the subject. Note that submission of this information is mandatory and the editor retains the sole right to decide whether or not the suggested reviewers are used.

**PREPARATION**

**Queries**

For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

**Use of word processing software**

It is important that the file be saved in the native format of the word processor used. The text should be in single-column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. In particular, do not use the word processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc. When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). Note that source files of figures, tables and text graphics will be required whether or not you embed your figures in the text. See also the section on Electronic artwork.

To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

**Article structure**

**Article Structure**

The manuscripts should be submitted in double-spaced typing (not 1-1/2 spaced typing), 12 points Times font, on consecutively numbered pages of uniform size no greater than 21 x 30 cm with 3.0 cm margin on the left and 2.0 cm margins on top, bottom and right.

Each item should begin on a new page. 1. Manuscript cover page; 2. Title page containing the following, centered, starting at the top : title, names, affiliations and addresses of all authors. This is followed by the abstract, left-justified and double-spaced; 3. Text, double-spaced; 4. List of references, single-space within a reference, double-space between references; 5. Tables, one per page (caption above each table, Roman numeral); 6. List of figure captions; 7. Figures (without captions); just put figure number (Arabic numeral) at bottom.

**Subdivision - numbered sections**

Divide your article into clearly defined and numbered sections. Subsections should be numbered 1.1 (then 1.1.1, 1.1.2, ...), 1.2, etc. (the abstract is not included in section numbering). Use this numbering also for internal cross-referencing: do not just refer to 'the text'. Any subsection may be given a brief heading. Each heading should appear on its own separate line.

**Introduction**

State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results.
Material and methods
Provide sufficient details to allow the work to be reproduced by an independent researcher. Methods that are already published should be summarized, and indicated by a reference. If quoting directly from a previously published method, use quotation marks and also cite the source. Any modifications to existing methods should also be described.

Theory/calculation
A Theory section should extend, not repeat, the background to the article already dealt with in the Introduction and lay the foundation for further work. In contrast, a Calculation section represents a practical development from a theoretical basis.

Results
Results should be clear and concise.

Discussion
This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.

Conclusions
The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.

Appendices
If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

Essential title page information
- **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae wherever possible. Avoid using expressions such as "For the first time", "to our knowledge", "successfully", "new", and "novel", or variants of these in the title. The same applies to the abstract, highlights, text, and captions.
- **Author names and affiliations.** Where the family name may be ambiguous (e.g., a double name), please indicate this clearly. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.
- **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. Ensure that telephone and fax numbers (with country and area code) are provided in addition to the e-mail address and the complete postal address. Contact details must be kept up to date by the corresponding author.
- **Present/permanent address.** If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

Highlights
Highlights are mandatory for this journal as they help increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

Abstract
A concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s). Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

Abstract should be limited to 300 words.
**Graphical abstract**

Although a graphical abstract is optional, its use is encouraged as it draws more attention to the online article. The graphical abstract should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: Please provide an image with a minimum of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. You can view Example Graphical Abstracts on our information site.

**Keywords**

Immediately after the abstract, provide a maximum of 6 keywords, using American spelling and avoiding general and plural terms and multiple concepts (avoid, for example, ‘and’, ‘of’). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

**Abbreviations**

Define abbreviations that are not standard in this field in a footnote to be placed on the first page of the article. Such abbreviations that are unavoidable in the abstract must be defined at their first mention there, as well as in the footnote. Ensure consistency of abbreviations throughout the article.

**Acknowledgements**

Collate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

**Formatting of funding sources**

List funding sources in this standard way to facilitate compliance to funder’s requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzzz]; and the United States Institutes of Peace [grant number aaaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, it is recommended to include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

**Nomenclature and units**

Follow internationally accepted rules and conventions: use the international system of units (SI). If other quantities are mentioned, give their equivalent in SI. You are urged to consult IUPAP: Symbols, Units, Nomenclature and Fundamental Constants in Physics for further information.

**Math formulae**

Please submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., X/Y. In principle, variables are to be presented in italics. Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).

**Footnotes**

Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors can build footnotes into the text, and this feature may be used. Otherwise, please indicate the position of footnotes in the text and list the footnotes themselves separately at the end of the article. Do not include footnotes in the Reference list.

**Artwork**

**General points**

• Make sure you use uniform lettering and sizing of your original artwork.
• Embed the used fonts if the application provides that option.
• Aim to use the following fonts in your illustrations: Arial, Courier, Times New Roman, Symbol, or use fonts that look similar.
• Number the illustrations according to their sequence in the text.
• Use a logical naming convention for your artwork files.
• Provide captions to illustrations separately.
• Size the illustrations close to the desired dimensions of the published version.
• Submit each illustration as a separate file.

As a general rule, the lettering on the artwork should have a finished, printed size of 7 pt for normal text and no smaller than 6 pt for subscript and superscript characters. Smaller lettering will yield text that is hardly legible. This is a rule-of-thumb rather than a strict rule. There are instances where other factors in the artwork (e.g., tints and shadings) dictate a finished size of perhaps 10 pt.

A detailed guide on electronic artwork is available on our website: https://www.elsevier.com/artworkinstructions

You are urged to visit this site; some excerpts from the detailed information are given here.

Formats
If your electronic artwork is created in a Microsoft Office application (Word, PowerPoint, Excel) then please supply 'as is' in the native document format.
Regardless of the application used other than Microsoft Office, when your electronic artwork is finalized, please 'Save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):
EPS (or PDF): Vector drawings, embed all used fonts.
TIFF (or JPEG): Color or grayscale photographs (halftones), keep to a minimum of 300 dpi.
TIFF (or JPEG): Bitmapped (pure black and white pixels) line drawings, keep to a minimum of 1000 dpi.
TIFF (or JPEG): Combinations bitmapped line/half-tone (color or grayscale), keep to a minimum of 500 dpi.

Please do not:
• Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); these typically have a low number of pixels and limited set of colors;
• Supply files that are too low in resolution;
• Submit graphics that are disproportionately large for the content.

Color artwork
Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF) or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these figures will appear in color online (e.g., ScienceDirect and other sites) in addition to color reproduction in print. Further information on the preparation of electronic artwork.

Figure captions
Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

Tables
Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

References
Citation in text
Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.
Web references
As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

Data references
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

Preprint references
Where a preprint has subsequently become available as a peer-reviewed publication, the formal publication should be used as the reference. If there are preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published, these may be referenced. Preprints should be clearly marked as such, for example by including the word preprint, or the name of the preprint server, as part of the reference. The preprint DOI should also be provided.

References in a special issue
Please ensure that the words 'this issue' are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

Reference management software
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal's style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.

Reference style
Text: Indicate references by number(s) in square brackets in line with the text. The actual authors can be referred to, but the reference number(s) must always be given.
Example: '..... as demonstrated [3,6]. Barnaby and Jones [8] obtained a different result ....'
List: Number the references (numbers in square brackets) in the list in the order in which they appear in the text.
Examples:
Reference to a journal publication:
Reference to a journal publication with an article number:
Reference to a book:
Reference to a chapter in an edited book:
Reference to a website:
Reference to a dataset:
Reference to software:

**Journal abbreviations source**

Journal names should be abbreviated according to the List of Title Word Abbreviations.

**Video**

Elsevier accepts video material and animation sequences to support and enhance your scientific research. Authors who have video or animation files that they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table by referring to the video or animation content and noting in the body text where it should be placed. All submitted files should be properly labeled so that they directly relate to the video file's content. In order to ensure that your video or animation material is directly usable, please provide the file in one of our recommended file formats with a preferred maximum size of 150 MB per file, 1 GB in total. Video and animation files supplied will be published online in the electronic version of your article in Elsevier Web products, including ScienceDirect. Please supply 'stills' with your files: you can choose any frame from the video or animation or make a separate image. These will be used instead of standard icons and will personalize the link to your video data. For more detailed instructions please visit our video instruction pages. Note: since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and the print version for the portions of the article that refer to this content.

**Data visualization**

Include interactive data visualizations in your publication and let your readers interact and engage more closely with your research. Follow the instructions here to find out about available data visualization options and how to include them with your article.

**Supplementary material**

Supplementary material such as applications, images and sound clips, can be published with your article to enhance it. Submitted supplementary items are published exactly as they are received (Excel or PowerPoint files will appear as such online). Please submit your material together with the article and supply a concise, descriptive caption for each supplementary file. If you wish to make changes to supplementary material during any stage of the process, please make sure to provide an updated file. Do not annotate any corrections on a previous version. Please switch off the 'Track Changes' option in Microsoft Office files as these will appear in the published version.

**Research data**

This journal requires and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings, which may also include software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. When sharing data in one of these ways, you are expected to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

**Data linking**

If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.

For **supported data repositories** a repository banner will automatically appear next to your published article on ScienceDirect.
In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

**Research Elements**

This journal enables you to publish research objects related to your original research – such as data, methods, protocols, software and hardware – as an additional paper in a Research Elements journal.

Research Elements is a suite of peer-reviewed, open access journals which make your research objects findable, accessible and reusable. Articles place research objects into context by providing detailed descriptions of objects and their application, and linking to the associated original research articles. Research Elements articles can be prepared by you, or by one of your collaborators.

During submission, you will be alerted to the opportunity to prepare and submit a manuscript to one of the Research Elements journals.

More information can be found on the Research Elements page.

**Data statement**

To foster transparency, we require you to state the availability of your data in your submission if your data is unavailable to access or unsuitable to post. This may also be a requirement of your funding body or institution. You will have the opportunity to provide a data statement during the submission process. The statement will appear with your published article on ScienceDirect. For more information, visit the Data Statement page.

**AFTER ACCEPTANCE**

**Online proof correction**

To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Corresponding authors will receive an e-mail with a link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors. If preferred, you can still choose to annotate and upload your edits on the PDF version. All instructions for proofing will be given in the e-mail we send to authors, including alternative methods to the online version and PDF.

We will do everything possible to get your article published quickly and accurately. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. It is important to ensure that all corrections are sent back to us in one communication. Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

**Offprints**

The corresponding author will, at no cost, receive a customized Share Link providing 50 days free access to the final published version of the article on ScienceDirect. The Share Link can be used for sharing the article via any communication channel, including email and social media. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Corresponding authors who have published their article gold open access do not receive a Share Link as their final published version of the article is available open access on ScienceDirect and can be shared through the article DOI link.

**AUTHOR INQUIRIES**

Visit the Elsevier Support Center to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch. You can also check the status of your submitted article or find out when your accepted article will be published.
