DESCRIPTION

*Trauma Case Reports*, a companion title to the respected publication, *Injury*, is the only open access, online journal dedicated to publishing case reports on all aspects of trauma care and accident surgery.

Case reports on all aspects of trauma management, surgical procedures for all tissues, resuscitation, anaesthesia and trauma and tissue healing will be considered for publication by the international editorial team and will be subject to peer review. Bringing together these cases from an international authorship will shed light on surgical problems and help in their effective resolution.

ABSTRACTING AND INDEXING

EDITORIAL BOARD

*Editor-in-Chief*
Peter Giannoudis, Leeds, United Kingdom

*Editor, Non-Orthopaedic*
Ian Civil, Auckland, New Zealand

*Editor, Spine, Pelvis and Acetabular*
Hans-Christoph Pape, Zurich, Switzerland

*Editor, Basic Science and Biomechanics*
Christopher Evans, Rochester, Minnesota, United States of America
Cyril Mauffrey, Denver, Colorado, United States of America

*Editor, Lower Limb*
Andrew Gray, Middlesbrough, United Kingdom

*Editor, Epidemiology*
Bridget Kool, Auckland, New Zealand

*Editor, Upper Limb*
Craig Roberts, Louisville, Kentucky, United States of America
Reviews Editor (Non-Orthopaedics)
Peter Cameron, Melbourne, Australia

Editor, Morbidity and Mortality Cases
Richard Buckley, Calgary, Alberta, Canada
GUIDE FOR AUTHORS

**Journal scope**
*Trauma Case Reports*, edited by Professor Peter Giannoudis and his editorial team from *Injury, the International Journal of the Care of the Injured*, is the only open access, online journal dedicated to the publication of case reports in all aspects of trauma care and accident surgery. Case reports on all aspects of trauma management, surgical procedures for all tissues, resuscitation, anaesthesia and trauma and tissue healing will be considered for publication by the international editorial team and will be subject to peer review. Bringing together these cases from an international authorship will shed light on surgical problems and help in their effective resolution.

**Editorial policy**
Original contributions are welcomed from any country, but the prose used in manuscripts must conform to acceptable English usage. The text must be clear, logical and concise. In assessing a manuscript for publication the Editors will also consider its originality, educational value and validity. Recommendations regarding major rearrangements or corrections may be offered to help authors re-write their submission in a way that is acceptable to the journal. The Editors reserve the right to make editorial and literary changes and accepted articles may be subject to further copy-editing to conform to journal style.

The journal uses a double-blind review process. As reviewers assist in their own time, without remuneration, authors can greatly assist the process by submitting correctly formatted papers in accordance with the following guidelines.

**Ethics in publishing**
Please see our information on Ethics in publishing.

**Studies in humans and animals**
If the work involves the use of human subjects, the author should ensure that the work described has been carried out in accordance with The Code of Ethics of the World Medical Association (Declaration of Helsinki) for experiments involving humans. The manuscript should be in line with the Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals and aim for the inclusion of representative human populations (sex, age and ethnicity) as per those recommendations. The terms sex and gender should be used correctly.

Authors should include a statement in the manuscript that informed consent was obtained for experimentation with human subjects. The privacy rights of human subjects must always be observed.

All animal experiments should comply with the ARRIVE guidelines and should be carried out in accordance with the U.K. Animals (Scientific Procedures) Act, 1986 and associated guidelines, EU Directive 2010/63/EU for animal experiments, or the National Research Council's Guide for the Care and Use of Laboratory Animals and the authors should clearly indicate in the manuscript that such guidelines have been followed. The sex of animals must be indicated, and where appropriate, the influence (or association) of sex on the results of the study.

**Language editing services**
Authors who require information about language editing and copyediting services pre- and post-submission please visit [https://www.elsevier.com/languagepolishing](https://www.elsevier.com/languagepolishing) for more information. Use of an English-language editing service is not mandatory, and will not guarantee acceptance or preference for publication. Elsevier neither endorses nor takes responsibility for any products, goods or services offered by outside vendors through our services or in any advertising. For more information, please refer to our Terms and Conditions: [https://www.elsevier.com/termsandconditions](https://www.elsevier.com/termsandconditions).

**Online submission**
All material should be submitted through the online submission and review system [https://www.editorialmanager.com/tc-r/](https://www.editorialmanager.com/tc-r/). All text, including references, figure legends and tables should be prepared in a single file. Illustrations should be supplied as separate files.

**Authorship**
All authors should have made substantial contributions to all of the following: the conception and design of the study, or acquisition of data, or analysis and interpretation of data drafting the article or revising it critically for important intellectual content final approval of the version to be submitted.
Acknowledgements

All contributors who do not meet the criteria for authorship as defined above should be listed in an acknowledgements section. Examples of those who might be acknowledged include a person who provided purely technical help, writing assistance, or a department chair who provided only general support. Authors should disclose whether they had any writing assistance and identify the entity that paid for this assistance.

Conflict of interest

Authors

At the end of the text, under a subheading 'Conflict of interest statement', all authors must disclose any financial and personal relationships with other people or organisations that could inappropriately influence (bias) their work. Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. If the authors have no conflicts of interest, they should state 'none'.

Reviewers

Reviewers must disclose to the Editor any conflicts of interest that could bias their opinions of the manuscript, and they should disqualify themselves from reviewing specific manuscripts if they believe it to be appropriate. Reviewers must state explicitly whether conflicts do or do not exist. Reviewers must not use knowledge of the work, before its publication, to further their own interests.

Role of the funding source

All sources of funding should be declared as an acknowledgement at the end of the text. Authors should declare the role of study sponsors, if any, in the study design, in the collection, analysis and interpretation of data; in the writing of the manuscript; and in the decision to submit the manuscript for publication. If the study sponsors had no such involvement, the authors should so state.

Open access

This journal makes your article freely available on Elsevier's platforms. The Article Processing Charge is $700, excludes taxes. In some cases, institutions and funding bodies have entered into agreement with Elsevier to meet these fees on behalf of their authors. Details of these agreements are available at https://www.elsevier.com/fundingbodies. Authors of accepted articles, who wish to take advantage of this option, should complete and submit the order form (available at https://www.elsevier.com/locate/openaccessform.pdf). Whatever access option you choose, you retain many rights as an author, including the right to post a revised personal version of your article on your own website. More information can be found here: https://www.elsevier.com/authorsrights.

Ethics

Identifying information, including patients images, names, initials, or hospital numbers, should not be included in videos, recordings, written descriptions, photographs, and pedigrees unless the information is essential for scientific purposes and you have obtained written informed consent for publication in print and electronic form from the patient (or parent, guardian or next of kin where applicable). If such consent is made subject to any conditions, Elsevier must be made aware of all such conditions. Written consents must be provided to Elsevier on request. Even where consent has been given, identifying details should be omitted if they are not essential. If identifying characteristics are altered to protect anonymity, such as in genetic pedigrees, authors should provide assurance that alterations do not distort scientific meaning and editors should so note. If such consent has not been obtained, personal details of patients included in any part of the paper and in any supplementary materials (including all illustrations and videos) must be removed before submission.

Covering letter

Manuscripts must be accompanied by a covering letter stating that the current “Guide for Authors” has been read, thereby indicating compliance with those instructions and acceptance of the conditions posed. The letter should state that the authors have seen and agreed to the submitted version of the paper, and bear responsibility for it; that all who have been acknowledged as contributors or as providers of personal communications have agreed to their inclusion; that the material is original; and that it has been neither published elsewhere nor submitted for publication simultaneously. In addition the letter should state that if accepted, the paper will not be published elsewhere in the same or similar form, in English or in any other language, without written consent of the copyright holder.
Preparation of manuscripts (for preparation of Morbidity and Mortality Case Reports, see below)

Failure to submit papers in accordance with these instructions will result in the return of the manuscript for correction before it is sent out for review. All copy must be typed double spaced, including text, bibliographies, figure legends and tables. Use a standard, easy-to-read word processor font such as Times New Roman or Arial. All pages should be numbered in the bottom right corner or bottom centre. Papers should be set out as follows: title page, summary, keywords, text, acknowledgements, references, figure legends, tables.

Case reports should be presented as briefly as possible. Succinct articles are more likely to be accepted for publication. Case reports should be no more than 1200 words, with a maximum of 10 references and four tables/figures.

Title page
The title page should give the following: title of the article initials and name of each author name and address of the department or institution to which the work should be attributed the name, address, telephone, fax and e-mail details of the author responsible for editorial correspondence details of any meeting at which the work was presented, wholly or in part.

Summary and keywords
The article summary should consist of no more than 300 words. The journal does not demand structured abstracts, but the summary should briefly describe the background and purposes of the report, the subjects studied and the methods used, the main findings (including specific data and statistical analysis) and the conclusions. Four to six keywords should be provided at the end of the summary.

Text
Headings should be appropriate to the nature of the paper. The proper use of headings enhances clarity and readability. Normally only two categories of heading should be used, which should be clearly distinguished.

Drug/device names: Use generic names of drugs, suture materials and instruments whenever possible. Give the trade name in brackets after the generic or approved name, followed by manufacturer, city, state (if US), and country. Proprietary names should be capitalised.

Abbreviations should be avoided in the title and summary. Explain abbreviations when they first occur in the text.

Numbers: use SI units throughout. Spell out the numbers one to ten except when used for units of measurement (mass, time, length); for numbers over ten use numerals except when starting a sentence. Do not give percentages if the total number in the sample is less than 50. Percentages greater than ten should be rounded to the nearest whole number. Numerical data should be analysed by appropriate statistical methods. When evaluating a manuscript, the Editor and statistical referees will consider the design of the study, the presentation of the data, the analysis of the data and the interpretation of the results. The use of standard deviation and standard error should be clearly distinguished. The statistical test(s) used should be stated clearly in the 'Methods' section of the paper. Statistical significance should not be confused with clinical significance. In particular, 'negative' findings should be interpreted through the use of confidence intervals. Authors should beware of placing undue emphasis on secondary analyses, especially when they are suggested by an inspection of the data.

Tables
These should be double-spaced, and contain only horizontal rules. Format tables with tabs rather than spaces, or prepare them as tables in Microsoft Word. Do not submit tables as photographs. A short descriptive title should appear above each table and any footnotes, suitably identified, below. Care must be taken to ensure that all units are included. Ensure that each table is cited in the text.

Figures
Figures should be submitted online as separate files. The minimum resolution for high quality reproduction is 300 dpi. For detailed instructions on the preparation of electronic artwork, consult the Artwork Instructions to Authors: https://www.elsevier.com/artworkinstructions. Permission to reproduce illustrations from other sources should always be obtained before submission, and details included with the legend. The journal is published in full colour (in print and online) at no charge to authors, so colour photographs should be submitted wherever possible. Photographs must be in
sharp focus with good contrast and should not be altered or retouched in any way. ‘Before’ and ‘after’ photographs of patients should be standardised in terms of size, position and lighting. Provide scale bars on photomicrographs rather than stating the magnification in the legend. Legends are required for figures and should be included as part of the manuscript. All figures should be numbered in a single sequence.

**Patient confidentiality:** where illustrations include individuals of whatever age who are recognizable or whose identity may be deduced from the context, written consent must be obtained for publication. All identifying features not considered relevant to the text should be obscured.

**References**

Please ensure that you include all relevant references to previous articles in *Trauma Case Reports* and/or *Injury*. The accuracy of references is the responsibility of the authors. Limit citations to those that are essential to the study. It is not necessary or appropriate to quote each and every historical reference unless there is a specific point to be made. References derived from computer literature searches should not be cited unless they have been read and contribute specifically to the discussion. References should be cited in the text in numerical order, not alphabetically, and be indicated in the text by superscript numbers, e.g. 1, 2 or 1-4. The reference list should be typed double-spaced and in numerical order. If there are more than six authors list only the first three followed by ‘et al’. Journal titles should be abbreviated according to Index Medicus (see [http://www.nlm.nih.gov/tsd/serials/lji.html](http://www.nlm.nih.gov/tsd/serials/lji.html)). Internet resources should have their accessibility verified and all URLs should be checked again at proof stage.

**Data references**

This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. This identifier will not appear in your published article.

**Examples**

**Preparation of Morbidity and Mortality Case Reports**

Morbidity and Mortality Case Reports should be written in paragraph or bullet form where appropriate and should consist of no more than 1000 words with accompanying Figures and Tables. They should follow the following layout:

Accurate, short, descriptive **Title** reflecting the patient problem and result **Patient background** with personal insult or trauma, past medical history and good quality x-rays of problem anatomy, blood work etc. **Summary patient presentation** **Summary of Treatment options entertained** **Summary of Patient course and treatment** with x-rays, blood work etc. until resolution of patient problem **Determined reasons for patient morbidity and mortality with recent literature search** **Summary** of Case Report - 2 sentences or bullet points **Literature** to support Case Report (5 or less references)
Role of the funding source
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement then this should be stated.

Funding body agreements and policies
Elsevier has established agreements and developed policies to allow authors whose articles appear in journals published by Elsevier, to comply with potential manuscript archiving requirements as specified as conditions of their grant awards. To learn more about existing agreements and policies please visit https://www.elsevier.com/fundingbodies.

Peer Review Process
This journal uses double-blind review, which means that both the reviewer and author name(s) are not allowed to be revealed to one another for a manuscript under review. The identities of the authors are concealed from the reviewers, and vice versa. For more information please refer to https://www.elsevier.com/reviewers/peer-review. To facilitate this, please include the following separately: Title page (with author details): This should include the title, authors' names and affiliations, and a complete address for the corresponding author including an e-mail address. Blinded manuscript (no author details): The main body of the paper (including the references, figures, tables and any Acknowledgements) should not include any identifying information, such as the authors' names or affiliations.

All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then sent to a minimum of one independent expert reviewer to assess the scientific quality of the paper. Reviewers are chosen from a database of 1430+ potential reviewers, including Editorial Board members. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final.

Proofs
One set of page proofs in PDF format will be sent by e-mail to the corresponding author, which they are requested to correct and return within 48 hours. Elsevier now sends PDF proofs which can be annotated; for this you will need to download Adobe Reader version 7 available free from Adobe. Instructions on how to annotate PDF files will accompany the proofs. The exact system requirements are given at the Adobe site.

If you do not wish to use the PDF annotations function, you may list the corrections (including replies to the Query Form) in an e-mail. Please list your corrections quoting line number. If, for any reason, this is not possible, then mark the corrections and any other comments (including replies to the Query Form) on a printout of your proof and return by fax, or scan the pages and e-mail, or by post. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. We will do everything possible to get your article published quickly and accurately. Therefore, it is important to ensure that all of your corrections are sent back to us in one communication: please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility. Note that Elsevier may proceed with the publication of your article if no response is received.

Offprints
The corresponding author, at no cost, will be provided with a PDF file of the article via e-mail. The PDF file is a watermarked version of the published article and includes a cover sheet with the journal cover image and a disclaimer outlining the terms and conditions of use.

Declaration of generative AI in scientific writing
The below guidance only refers to the writing process, and not to the use of AI tools to analyse and draw insights from data as part of the research process.

Where authors use generative artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should only use these technologies to improve readability and language. Applying the technology should be done with human oversight and control, and authors should carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or
Authors should disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

**Disclosure instructions**

Authors must disclose the use of generative AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in the core manuscript file, before the References list. The statement should be placed in a new section entitled ‘Declaration of Generative AI and AI-assisted technologies in the writing process’.

*Statement: During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.*

This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, there is no need to add a statement.

**Submission declaration**

Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder.

**Preprints**

Please note that preprints can be shared anywhere at any time, in line with Elsevier’s sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see 'Multiple, redundant or concurrent publication' for more information).

**Preprint posting on SSRN**

In support of Open Science, this journal offers its authors a free preprint posting service. Preprints provide early registration and dissemination of your research, which facilitates early citations and collaboration.

During submission to Editorial Manager, you can choose to release your manuscript publicly as a preprint on the preprint server SSRN once it enters peer-review with the journal. Your choice will have no effect on the editorial process or outcome with the journal. Please note that the corresponding author is expected to seek approval from all co-authors before agreeing to release the manuscript publicly on SSRN.

You will be notified via email when your preprint is posted online and a Digital Object Identifier (DOI) is assigned. Your preprint will remain globally available free to read whether the journal accepts or rejects your manuscript.

For more information about posting to SSRN, please consult the SSRN Terms of Use and FAQs.

**Use of inclusive language**

Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns (“clinicians, patients/clients”) as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or
health condition unless they are relevant and valid. When coding terminology is used, we recommend to avoid offensive or exclusionary terms such as "master", "slave", "blacklist" and "whitelist". We suggest using alternatives that are more appropriate and (self-) explanatory such as "primary", "secondary", "blocklist" and "allowlist". These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

**Reporting sex- and gender-based analyses**

**Reporting guidance**

For research involving or pertaining to humans, animals or eukaryotic cells, investigators should integrate sex and gender-based analyses (SGBA) into their research design according to funder/sponsor requirements and best practices within a field. Authors should address the sex and/or gender dimensions of their research in their article. In cases where they cannot, they should discuss this as a limitation to their research's generalizability. Importantly, authors should explicitly state what definitions of sex and/or gender they are applying to enhance the precision, rigor and reproducibility of their research and to avoid ambiguity or conflation of terms and the constructs to which they refer (see Definitions section below). Authors can refer to the Sex and Gender Equity in Research (SAGER) guidelines and the SAGER guidelines checklist. These offer systematic approaches to the use and editorial review of sex and gender information in study design, data analysis, outcome reporting and research interpretation - however, please note there is no single, universally agreed-upon set of guidelines for defining sex and gender.

**Definitions**

Sex generally refers to a set of biological attributes that are associated with physical and physiological features (e.g., chromosomal genotype, hormonal levels, internal and external anatomy). A binary sex categorization (male/female) is usually designated at birth ("sex assigned at birth"), most often based solely on the visible external anatomy of a newborn. Gender generally refers to socially constructed roles, behaviors, and identities of women, men and gender-diverse people that occur in a historical and cultural context and may vary across societies and over time. Gender influences how people view themselves and each other, how they behave and interact and how power is distributed in society. Sex and gender are often incorrectly portrayed as binary (female/male or woman/man) and unchanging whereas these constructs actually exist along a spectrum and include additional sex categorizations and gender identities such as people who are intersex/have differences of sex development (DSD) or identify as non-binary. Moreover, the terms "sex" and "gender" can be ambiguous—thus it is important for authors to define the manner in which they are used. In addition to this definition guidance and the SAGER guidelines, the resources on this page offer further insight around sex and gender in research studies.

**Author contributions**

For transparency, we require corresponding authors to provide co-author contributions to the manuscript using the relevant CRediT roles. The CRediT taxonomy includes 14 different roles describing each contributor's specific contribution to the scholarly output. The roles are: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; and Writing - review & editing. Note that not all roles may apply to every manuscript, and authors may have contributed through multiple roles. More details and an example.

**Article transfer service**

This journal uses the Elsevier Article Transfer Service to find the best home for your manuscript. This means that if an editor feels your manuscript is more suitable for an alternative journal, you might be asked to consider transferring the manuscript to such a journal. The recommendation might be provided by a Journal Editor, a dedicated Scientific Managing Editor, a tool assisted recommendation, or a combination. If you agree, your manuscript will be transferred, though you will have the opportunity to make changes to the manuscript before the submission is complete. Please note that your manuscript will be independently reviewed by the new journal. More information.

**Copyright**

Upon acceptance of an article, authors will be asked to complete a 'License Agreement' (see more information on this). Permitted third party reuse of open access articles is determined by the author's choice of user license.
As an author you (or your employer or institution) have certain rights to reuse your work. More information.

Elsevier supports responsible sharing
Find out how you can share your research published in Elsevier journals.

Open access
Please visit our Open Access page for more information.

Elsevier Researcher Academy
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

Queries
For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

Highlights
Highlights are optional yet highly encouraged for this journal, as they increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the examples here: example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

Data references
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

Preprint references
Where a preprint has subsequently become available as a peer-reviewed publication, the formal publication should be used as the reference. If there are preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published, these may be referenced. Preprints should be clearly marked as such, for example by including the word preprint, or the name of the preprint server, as part of the reference. The preprint DOI should also be provided.

Reference management software
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal's style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.

Research data
This journal encourages and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings, which may also include software, code, models, algorithms, protocols, methods and other useful materials related to the project.
Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. If you are sharing data in one of these ways, you are encouraged to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

**Data linking**
If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.

For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.

In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

**Mendeley Data**
This journal supports Mendeley Data, enabling you to deposit any research data (including raw and processed data, video, code, software, algorithms, protocols, and methods) associated with your manuscript in a free-to-use, open access repository. Before submitting your article, you can deposit the relevant datasets to Mendeley Data. Please include the DOI of the deposited dataset(s) in your main manuscript file. The datasets will be listed and directly accessible to readers next to your published article online.

For more information, visit the Mendeley Data for journals page.

**Research Elements**
This journal enables you to publish research objects related to your original research – such as data, methods, protocols, software and hardware – as an additional paper in a Research Elements journal.

Research Elements is a suite of peer-reviewed, open access journals which make your research objects findable, accessible and reusable. Articles place research objects into context by providing detailed descriptions of objects and their application, and linking to the associated original research articles. Research Elements articles can be prepared by you, or by one of your collaborators.

During submission, you will be alerted to the opportunity to prepare and submit a manuscript to one of the Research Elements journals.

More information can be found on the Research Elements page.

**Data statement**
To foster transparency, we encourage you to state the availability of your data in your submission. This may be a requirement of your funding body or institution. If your data is unavailable to access or unsuitable to post, you will have the opportunity to indicate why during the submission process, for example by stating that the research data is confidential. The statement will appear with your published article on ScienceDirect. For more information, visit the Data Statement page.

**Contact details for submission**
If you need any further help, please visit our Support Center.
