TRENDS IN ANALYTICAL CHEMISTRY

TABLE OF CONTENTS

- Description p.1
- Audience p.2
- Abstracting and Indexing p.2
- Editorial Board p.2
- Guide for Authors p.6

DESCRIPTION

The articles in TrAC are concise, critical overviews of new developments in analytical chemistry, which are aimed at helping analytical chemists and other users of analytical techniques. These critical reviews comprise excellent, up-to-date, timely coverage of topics of interest in analytical chemistry, such as: analytical instrumentation, biomedical analysis, biomolecular analysis, biosensors, chemical analysis, chemometrics, clinical chemistry, drug discovery, environmental analysis and monitoring, food analysis, forensic science, laboratory automation, materials science, metabolomics, pesticide-residue analysis, pharmaceutical analysis, proteomics, surface science, and water analysis and monitoring.

General issues contain critical review articles. Special Issues provide comprehensive updates with critical review articles on particularly topical fields of interest in analytical chemistry.

Please note that all articles published in the journal are by invitation of one of the Editors. If you wish to submit a review to TrAC and have not been invited by one of the Editors, please first submit a short proposal using the standard review proposal template directly to the Journal Editorial Office, tracproposals@elsevier.com.

When submitting a Proposal, please indicate which of the listed Contributing Editor(s) of TrAC you feel is best suited to review your proposal (please list a maximum of 3 in order of preference). Authors will then be required to select the same Editor that approved the proposal when completing their final submission.

Only once you have received approval from a Contributing Editor that your proposal has been accepted should you submit your paper to the journal. All reviews should be submitted via Editorial Manager and will be subject to the normal peer review process.

If you wish to submit a proposal for a Special Issue, please submit first a short proposal using the standard Special Issue template directly to the journal (trac.ees@elsevier.com) and include the listed Contributing Editor(s) of TrAC you feel is best suited to support your proposal.

PLEASE NOTE: TrAC will not accept any submissions that have not had either an approved proposal or invitation to submit from an Editor.

Benefits to authors
We also provide many author benefits, such as free PDFs, a liberal copyright policy, special discounts on Elsevier publications and much more. Please click here for more information on our author services.

Please see our Guide for Authors for information on article submission. If you require any further information or help, please visit our Support Center.

AUDIENCE

All scientists, managers and students who are interested in keeping up-to-date with the latest developments and applications of analytical techniques.

Elena Ibáñez, Institute of Food Science Research, Madrid, Spain
Green extraction, Sustainability, Compressed fluids, Bioactive compounds

Jin-Ming Lin, Tsinghua University, Department of Chemistry, Beijing, China
Microfluidic chip mass spectrometry combined with cell drug metabolism

Juewen Liu, University of Waterloo, Department of Chemistry, Waterloo, Ontario, Canada
DNAzymes, aptamers, nanozymes, bioconjugate chemistry, gold nanoparticles, metal oxide nanoparticles, graphene oxide, fluorescence, FRET, metal ions, environmental monitoring

Gangfeng Ouyang, Sun Yat-sen University School of Chemistry, Guangzhou, China
Solid-phase microextraction, Bioanalysis, Environmental analysis

Stig Pedersen-Bjergaard, University of Oslo School of Pharmacy, Oslo, Norway
Sample preparation, Microextraction, Pharmaceutical analytical chemistry

Guowang Xu, Dalian Institute of Chemical Physics Chinese Academy of Sciences, Dalian, China
Metabolomics, LC-MS, GC-MS, Lipidomics, Metabolic Profiling

Editorial Advisory Board

Jared Anderson, Iowa State University, Department of Chemistry, Ames, Iowa, United States of America
Development of stationary phases for single and multidimensional chromatography, Sample preparation, Bioanalytical chemistry, and Developing analytical tools for trace-level analysis within active pharmaceutical ingredients

Hemant Bhutani, Bristol-Myers Squibb India Pvt Ltd, Mumbai, India
Chromatography, impurities, solid state characterization, degradation chemistry, stability, Stability

Barbara Bojko, Nicolaus Copernicus University in Toruń, Collegium Medicum in Bydgoszcz, Department of Pharmacodynamics and Molecular Pharmacology, Bydgoszcz, Poland
Introduction of new analytical solutions based on microextraction techniques and mass spectrometry to clinical diagnostics and research in the field of pharmaceutical sciences, Metabolomic and lipidomic analysis towards biomarkers discovery, Spatial and temporal resolution analysis of organs in vivo, On-site sampling in surgery and emergency room as a part of rapid diagnostic process.

Philippe Buhlmann, University of Minnesota Twin Cities, Minneapolis, Minnesota, United States of America
Electrochemical sensors, Molecular recognition, Fluorine chemistry, Surface analysis

Heather Clark, Northeastern University, Boston, Massachusetts, United States of America
nansensors, fluorescence, photoacoustics, chemical imaging

Andre De Villiers, Stellenbosch University, Stellenbosch, South Africa
Liquid chromatography, Gas chromatography, Multidimensional chromatography, Mass spectrometry, Ion mobility spectrometry, Sample preparation for chromatographic analysis, Natural product analysis

Zhifeng Ding, Western University, London, Ontario, Canada
Electrochemistry spectroscopy and microscopy to multidisciplinary research

W. Alexander Donald, University of New South Wales, Sydney, New South Wales, Australia
Mass spectrometry, Ion mobility, Proteins, Environmental, Bioanalytical, Metal organic frameworks, Ion chemistry, Tandem mass spectrometry, Single cell mass spectrometry, Native mass spectrometry

Devendra Dubey, Defence Research and Development Establishment, Gwalior, India
Analytical chemistry, organic synthesis, CHROMATOGRAPHY, MASS SPECTROMETRY, SAMPLE PREPARATION

Xiaohong Fang, Institute of Chemistry Chinese Academy of Sciences, Beijing, China
Biophysical and biochemical analysis, new fluorescent probes for real-time detection of DNA and protein, optical imaging of single molecule and biomolecular interaction at the single molecular level

Marianne Fillet, University of Liege, Liège, Belgium
Pharmaceutical analysis, biopharmaceuticals, therapeutic oligonucleotides, microfluidics, capillary electrophoresis, chromatography, ion mobility mass spectrometry, biomarkers of diseases

Frantisek Foret, Institute of Analytical Chemistry Czech Academy of Sciences, Brno, Czechia
Capillary electrophoresis, Microfluidics, Mass spectrometry coupling

Xueyun Gao, Beijing University of Technology, Beijing, China
Dr. Gao is engaged in bio-analytical methods and medical effect of metal clusters. His main interest is to develop Mass analytical methods to describe molecular pathway in cells and early pathological changes in tissues.

Davy Guillarme, University of Geneva, Genève, Switzerland
Chromatography in general, LC-MS, SFC-MS, Characterization of proteins biopharmaceuticals, Intact proteins analysis, Analysis of drugs in biofluids, Doping control analysis

Andras Guttman, University of Pannonia, Faculty of Engineering, Veszprém, Hungary
Capillary Electrophoresis, Glycomics, Biotherapeutics

Parastoo Hashemi, University of South Carolina, Columbia, South Carolina, United States of America
Voltagmmetry, neuroscience, neurochemistry, quantitative measurements, in vivo measurements

Michal Holcapek, University of Pardubice, Department of Analytical Chemistry, Pardubice, Czechia
Lipidomic analysis, Mass spectrometry, Liquid Chromatography, Supercritical fluid chromatography, Cancer biomarkers

Kiril D. Hristovski, Arizona State University Ira A Fulton Schools of Engineering, Tempe, Arizona, United States of America
Environmental nanomaterial applications and implications, Water quality, Water and wastewater treatment, Solid and hazardous waste

Chengzhi Huang, Southwest University, Chongqing, China
Biosensing and Bioimaging, Nanoprobes, Resonance Spectroscopy, Biomaterials, Optical sensors

Huangxian Ju, Nanjing University School of Chemistry and Chemical Engineering, Nanjing, China
Analytical biochemistry, nanobiosensing, bioimaging and molecular diagnosis, focusing on signal amplification and life analytical chemistry

Uwe Karst, University of Münster, Münster, Germany
Elemental speciation analysis, Liquid chromatography/mass spectrometry, Electrochemistry/mass spectrometry, Mass spectrometric imaging, Elemental bioimaging

Shaoping Li, University of Macau, Taipa, Macao
Herbal glycol-analysis; standard development of Chinese medicines; development of quality control methods; culture, fermentation, active ingredients and quality control of medicinal mushroom

Chao Lv, Beijing University of Chemical Technology, Beijing, China
Synthesis, characterization, imaging analysis of materials, Synthesis, characterization of nanostructured materials and nano-sensors, Chemiluminescence and electrochemiluminescence characterization of nanomaterials

Ashok Kumar Malik, Punjabi University Chemistry Department, Patiala, India
Inorganic Chemistry, Environmental Analytical Chemistry, Instrumentation in Analytical Chemistry

Badal Mandal, Vellore Institute of Technology, Vellore, India
Development of novel analytical methods using hyphenated techniques, Carbon based nanomaterials and its various applications, Hazardous waste removal technology, Nanomaterials and its various applications, Thin films and its different applications, Food Analysis and health risk assessment, Drug delivery and related analytical method development

Andreas Manz, Korea Institute of Science and Technology European Research Centre, Saarbrücken, Germany
Microfluidics, Lab-on-chip, Analytical chemistry

Maria Luisa Marina Alegre, University of Alcalá, Alcalá De Henares, Spain
Capillary Electrophoresis, Micro/Nano-chromatography, Chiral separations, Metabolomics, food/pharmaceutical/agrochemical analysis, Revalorization of food residues, Bioactive compounds

Lucie Nováková, Charles University, Praha, Czechia
Liquid chromatography, Supercritical fluid chromatography, Mass spectrometry, Sample preparation, Pharmaceutical analysis, Bioanalysis

Zheng Ouyang, Tsinghua University, Department of Precision Instrument, Beijing, China
Analytical Instrumentation, Simulation and data processing, Direct Sampling Ionization, Miniaturization of mass spectrometer, Biomedical analysis and point-of-care diagnosis

Teresa A. P. Rocha-Santos, University of Aveiro, Aveiro, Portugal
Study of organic contaminants and microplastics fate and behaviour in the environment and during wastewater treatment, Biodegradation of microplastics, Development of novel methods for environmental, food and heath care applications (fit for purpose)
Ajit Sarmah, The University of Auckland, Auckland, New Zealand
Organic contaminant analysis in water and soil samples, Mass spectrometry, Emerging contaminants, Pesticides, Nanomaterials, Fate and Risk of PPCPs in terrestrial and aquatic systems, Microplastic quantification, Biochar

Oliver Schmitz, University of Duisburg-Essen, Duisburg, Germany
Ion sources, two-dimensional Chromatography, mass spectrometry, origin-of-life

Albert Sickmann, ISAS Leibniz Institute for Analytical Sciences, Dortmund, Germany
Bioanalytics, Protein Chemistry, System Biology, Mass Spectrometry, Posttranslational Modifications.

Robert Synovec, University of Washington, Department of Chemistry, Seattle, Washington, United States of America
Comprehensive two-dimensional gas chromatography with mass spectrometry, Applications in fuels, Metabolomics, Foods, Environmental, and Forensics, chemometric data analysis of chromatographic data, high-speed gas chromatography

Peter Q. Tranchida, University of Messina, Department of Biological and Environmental Sciences, Messina, Italy
Comprehensive two-dimensional gas chromatography, Multidimensional gas chromatography, GC-MS, Fast GC-MS, Multidimensional liquid-gas chromatography, Mass spectrometry, Food analysis

Stephen Weber, University of Pittsburgh, Department of Chemistry, Pittsburgh, Pennsylvania, United States of America
Separation science including capillary liquid chromatography, Electrochemistry, Sampling by microdialysis and electroosmosis, Applications in neuroscience
GUIDE FOR AUTHORS

INTRODUCTION

TrAC has an interdisciplinary readership, which includes scientists in industry, academia and service laboratories. Its aim is to publish concise reviews covering the latest advances in analytical chemistry. Recent trends and developments, problems (and their solutions), and the limitations and the potential of the topic under discussion are all within the scope. Reviews should interpret rather than be comprehensive. They should not be unfairly biased towards the work of any particular laboratories. They should be written so that the non-specialist understands the principles and the applications of the topic. Consequently, articles should be broadly based and practically oriented. The use of specialized terms should be kept to a minimum, and explained fully in the text or in a glossary when used. All reviews will be subject to peer review and should be submitted through the Elsevier Editorial System (https://www.editorialmanager.com/TRAC). However, it is now mandatory that prospective authors discuss the proposed subject and scope of their review with one of TrAC’s Contributing Editors before submission via a new proposal form. Please see below under "Additional Information" for further details.

Reviews should comprise about 4000 words and include about four figures and tables. References should be limited to about 50 and should include other reviews and recent articles that readers can use to pursue their interest in the topic. Primary research papers describing the results of the authors’ research work are not within the scope of TrAC. Please note: TrAC is a review journal and most articles published in the Journal are by invitation of one of the Contributing Editors.

Additional information

TrAC reserves the right to edit, shorten or decline publication of all submitted articles. Authors will be consulted regarding major alterations to the text before printing. Galley proofs will be supplied to the authors of review articles, but no alterations other than the correction of errors can be made at the proof stage.

Please note that most articles published in the journal are by invitation of one of the Editors. If you wish to submit a review to TrAC and have not been invited by one of the Editors, please submit first a short proposal using the standard review proposal template directly to tracproposals@elsevier.com. Please indicate which of the listed Contributing Editor(s) of TrAC you feel is best suited to review your proposal (please list a maximum of 3 in order of preference). All reviews should be submitted via the Elsevier Editorial Manager System and will be subject to the normal peer review process.

If you wish to submit a proposal for a Special Issue, please submit first a short proposal using the standard Special Issue template directly to the journal (trac.ees@elsevier.com) and include the listed Contributing Editor(s) of TrAC you feel is best suited to support your proposal.

PLEASE NOTE: TrAC will not accept any submissions that have not had either an approved proposal or invitation to submit from an Editor.

Submission checklist

You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

Ensure that the following items are present:

One author has been designated as the corresponding author with contact details:
• E-mail address
• Full postal address

All necessary files have been uploaded:

Manuscript:
• Include keywords
• All figures (include relevant captions)
• All tables (including titles, description, footnotes)
• Ensure all figure and table citations in the text match the files provided
• Indicate clearly if color should be used for any figures in print

Graphical Abstracts / Highlights files (where applicable)
Supplemental files (where applicable)
Further considerations
• Manuscript has been 'spell checked' and 'grammar checked'
• All references mentioned in the Reference List are cited in the text, and vice versa
• Permission has been obtained for use of copyrighted material from other sources (including the Internet)
• A competing interests statement is provided, even if the authors have no competing interests to declare
• Journal policies detailed in this guide have been reviewed
• Referee suggestions and contact details provided, based on journal requirements

For further information, visit our Support Center.

BEFORE YOU BEGIN

Ethics in publishing
Please see our information on Ethics in publishing.

Declaration of competing interest
Corresponding authors, on behalf of all the authors of a submission, must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. All authors, including those without competing interests to declare, should provide the relevant information to the corresponding author (which, where relevant, may specify they have nothing to declare). Corresponding authors should then use this tool to create a shared statement and upload to the submission system at the Attach Files step. Please do not convert the .docx template to another file type. Author signatures are not required.

Declaration of generative AI in scientific writing
The below guidance only refers to the writing process, and not to the use of AI tools to analyse and draw insights from data as part of the research process.

Where authors use generative artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should only use these technologies to improve readability and language. Applying the technology should be done with human oversight and control, and authors should carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or biased. AI and AI-assisted technologies should not be listed as an author or co-author, or be cited as an author. Authorship implies responsibilities and tasks that can only be attributed to and performed by humans, as outlined in Elsevier’s AI policy for authors.

Authors should disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

Disclosure instructions
Authors must disclose the use of generative AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in the core manuscript file, before the References list. The statement should be placed in a new section entitled 'Declaration of Generative AI and AI-assisted technologies in the writing process'.

Statement: During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.

This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, there is no need to add a statement.

This requirement applies to any original work described, and not to a critical review of previously published papers to which reference is made.
Submission declaration and verification
Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify compliance, your article may be checked by Crossref Similarity Check and other originality or duplicate checking software.

Preprints
Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see 'Multiple, redundant or concurrent publication' for more information).

Preprint posting on SSRN
In support of Open Science, this journal offers its authors a free preprint posting service. Preprints provide early registration and dissemination of your research, which facilitates early citations and collaboration.

During submission to Editorial Manager, you can choose to release your manuscript publicly as a preprint on the preprint server SSRN once it enters peer-review with the journal. Your choice will have no effect on the editorial process or outcome with the journal. Please note that the corresponding author is expected to seek approval from all co-authors before agreeing to release the manuscript publicly on SSRN.

You will be notified via email when your preprint is posted online and a Digital Object Identifier (DOI) is assigned. Your preprint will remain globally available free to read whether the journal accepts or rejects your manuscript.

For more information about posting to SSRN, please consult the SSRN Terms of Use and FAQs.

Use of inclusive language
Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns (“clinicians, patients/clients”) as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. When coding terminology is used, we recommend to avoid offensive or exclusionary terms such as "master", "slave", "blacklist" and "whitelist". We suggest using alternatives that are more appropriate and (self-) explanatory such as "primary", "secondary", "blocklist" and "allowlist". These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

Reporting sex- and gender-based analyses

Reporting guidance
For research involving or pertaining to humans, animals or eukaryotic cells, investigators should integrate sex and gender-based analyses (SGBA) into their research design according to funder/sponsor requirements and best practices within a field. Authors should address the sex and/or gender dimensions of their research in their article. In cases where they cannot, they should discuss this as a limitation to their research's generalizability. Importantly, authors should explicitly state what definitions of sex and/or gender they are applying to enhance the precision, rigor and reproducibility of their research and to avoid ambiguity or conflation of terms and the constructs to which they refer (see Definitions section below). Authors can refer to the Sex and Gender Equity in Research (SAGER) guidelines and the SAGER guidelines checklist. These offer systematic approaches to the use and editorial review of sex and gender information in study design, data analysis, outcome reporting and research interpretation - however, please note there is no single, universally agreed-upon set of guidelines for defining sex and gender.
**Definitions**

Sex generally refers to a set of biological attributes that are associated with physical and physiological features (e.g., chromosomal genotype, hormonal levels, internal and external anatomy). A binary sex categorization (male/female) is usually designated at birth (“sex assigned at birth”), most often based solely on the visible external anatomy of a newborn. Gender generally refers to socially constructed roles, behaviors, and identities of women, men and gender-diverse people that occur in a historical and cultural context and may vary across societies and over time. Gender influences how people view themselves and each other, how they behave and interact and how power is distributed in society. Sex and gender are often incorrectly portrayed as binary (female/male or woman/man) and unchanging whereas these constructs actually exist along a spectrum and include additional sex categorizations and gender identities such as people who are intersex/have differences of sex development (DSD) or identify as non-binary. Moreover, the terms "sex" and "gender" can be ambiguous—thus it is important for authors to define the manner in which they are used. In addition to this definition guidance and the SAGER guidelines, the resources on this page offer further insight around sex and gender in research studies.

**Author contributions**

For transparency, we require corresponding authors to provide co-author contributions to the manuscript using the relevant CRediT roles. The CRediT taxonomy includes 14 different roles describing each contributor's specific contribution to the scholarly output. The roles are: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; and Writing - review & editing. Note that not all roles may apply to every manuscript, and authors may have contributed through multiple roles. More details and an example.

**Changes to authorship**

Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed.

Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

**Article transfer service**

This journal uses the Elsevier Article Transfer Service to find the best home for your manuscript. This means that if an editor feels your manuscript is more suitable for an alternative journal, you might be asked to consider transferring the manuscript to such a journal. The recommendation might be provided by a Journal Editor, a dedicated Scientific Managing Editor, a tool assisted recommendation, or a combination. If you agree, your manuscript will be transferred, though you will have the opportunity to make changes to the manuscript before the submission is complete. Please note that your manuscript will be independently reviewed by the new journal. More information.

**Copyright**

Upon acceptance of an article, authors will be asked to complete a 'Journal Publishing Agreement' (see more information on this). An e-mail will be sent to the corresponding author confirming receipt of the manuscript together with a 'Journal Publishing Agreement' form or a link to the online version of this agreement.

Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution and for all other derivative works, including compilations and translations. If excerpts from other copyrighted works are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article. Elsevier has preprinted forms for use by authors in these cases.
For gold open access articles: Upon acceptance of an article, authors will be asked to complete a 'License Agreement' (more information). Permitted third party reuse of gold open access articles is determined by the author's choice of user license.

**Author rights**
As an author you (or your employer or institution) have certain rights to reuse your work. More information.

**Elsevier supports responsible sharing**
Find out how you can share your research published in Elsevier journals.

**Role of the funding source**
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement, it is recommended to state this.

This requirement applies to any original work described and to the preparation of the article being submitted, and not to previously published papers to which reference is made in the article.

**Open access**
Please visit our Open Access page for more information.

**Elsevier Researcher Academy**
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

**Language (usage and editing services)**
Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the English Language Editing service available from Elsevier's Author Services.

Please use decimal points (not decimal commas); use a space for thousands (10 000 and above).

**Submission**
Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

Please submit your article via https://www.elsevier.com/locate/trac

**PREPARATION**
Please note that manuscripts must be submitted in Microsoft Word format. LaTeX or other formats are not acceptable.

**Queries**
For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

**Peer review**
This journal operates a single anonymized review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an
interest. Any such submission is subject to all of the journal's usual procedures, with peer review handled independently of the relevant editor and their research groups. More information on types of peer review.

Use of word processing software
It is important that the file be saved in the native format of the word processor used. The text should be in single-column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. In particular, do not use the word processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc. When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). Note that source files of figures, tables and text graphics will be required whether or not you embed your figures in the text. See also the section on Electronic artwork.

To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

Article structure
Subdivision - numbered sections
Divide your article into clearly defined and numbered sections. Subsections should be numbered 1.1 (then 1.1.1, 1.1.2, ...), 1.2, etc. (the abstract is not included in section numbering). Use this numbering also for internal cross-referencing: do not just refer to 'the text'. Any subsection may be given a brief heading. Each heading should appear on its own separate line.

Introduction
State the objectives of the review and provide an adequate background, avoiding a detailed literature survey or a summary of the results.

Discussion
This should explore the significance of the topic of the review.

Conclusion
The main conclusions of the review may be presented in a short Conclusions section.

Appendices
If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

Essential title page information
- Title. Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
- Author names and affiliations. Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. You can add your name between parentheses in your own script behind the English transliteration. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.
- Corresponding author. Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. This responsibility includes answering any future queries about Methodology and Materials. Ensure that the e-mail address is given and that contact details are kept up to date by the corresponding author.
- Present/permanent address. If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

Highlights
Highlights are mandatory for this journal as they help increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the examples here: example Highlights.
Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

Abstract
A concise, factual abstract is required. The abstract should state briefly the purpose of the review, the principal points of discussion and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, references should be avoided, but, if essential, they must be cited in full, without reference to the reference list. Also, non-standard or uncommon abbreviations should be avoided, but, if essential, they must be defined at their first mention in the abstract itself.

Keywords
Immediately after the abstract, provide a maximum of 10 keywords, using British spelling and avoiding general and plural terms and multiple concepts (avoid, for example, "and", "of"). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

Abbreviations
Define abbreviations that are not standard in this field an alphabetical list to be placed immediately after the keywords on the first page of the article. Abbreviations in the abstract must be defined at their first mention there. Ensure consistency of abbreviations throughout the article.

Acknowledgements
Collate acknowledgements in a separate section at the end of the article before the references, so do not include them on the title page, as a footnote to the title or otherwise. List those individuals who provided help in preparing the review (e.g., providing financial support, language help, writing assistance or proof reading the article, etc.).

Formatting of funding sources
List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.

If no funding has been provided for the research, it is recommended to include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Math formulae
Please submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., X/Y. In principle, variables are to be presented in italics. Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).

Footnotes
Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors can build footnotes into the text, and this feature may be used. Otherwise, please indicate the position of footnotes in the text and list the footnotes themselves separately at the end of the article. Do not include footnotes in the Reference list.

Artwork
Electronic artwork
General points
- Make sure you use uniform lettering and sizing of your original artwork.
- Embed the used fonts if the application provides that option.
• Aim to use the following fonts in your illustrations: Arial, Courier, Times New Roman, Symbol, or use fonts that look similar.
• Number the illustrations according to their sequence in the text.
• Use a logical naming convention for your artwork files.
• Provide captions to illustrations separately.
• Size the illustrations close to the desired dimensions of the published version.
• Submit each illustration as a separate file.
• Ensure that color images are accessible to all, including those with impaired color vision.

A detailed guide on electronic artwork is available.
**You are urged to visit this site; some excerpts from the detailed information are given here.**

**Formats**
If your electronic artwork is created in a Microsoft Office application (Word, PowerPoint, Excel) then please supply 'as is' in the native document format.
Regardless of the application used other than Microsoft Office, when your electronic artwork is finalized, please 'Save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):

- **EPS (or PDF):** Vector drawings, embed all used fonts.
- **TIFF (or JPEG):** Color or grayscale photographs (halftones), keep to a minimum of 300 dpi.
- **TIFF (or JPEG):** Bitmapped (pure black & white pixels) line drawings, keep to a minimum of 1000 dpi.
- **TIFF (or JPEG):** Combinations bitmapped line/half-tone (color or grayscale), keep to a minimum of 500 dpi.

**Please do not:**
- Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); these typically have a low number of pixels and limited set of colors;
- Supply files that are too low in resolution;
- Submit graphics that are disproportionately large for the content.

**Color artwork**
Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF), or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these figures will appear in color online (e.g., ScienceDirect and other sites) regardless of whether or not these illustrations are reproduced in color in the printed version. **For color reproduction in print, you will receive information regarding the costs from Elsevier after receipt of your accepted article.** Please indicate your preference for color: in print or online only. Further information on the preparation of electronic artwork.

**Figure captions**
Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

**Tables**
Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

**References**

**Citation in text**
Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.
Reference links
Increased discoverability of research and high quality peer review are ensured by online links to the sources cited. In order to allow us to create links to abstracting and indexing services, such as Scopus, Crossref and PubMed, please ensure that data provided in the references are correct. Please note that incorrect surnames, journal/book titles, publication year and pagination may prevent link creation. When copying references, please be careful as they may already contain errors. Use of the DOI is highly encouraged.

A DOI is guaranteed never to change, so you can use it as a permanent link to any electronic article. An example of a citation using DOI for an article not yet in an issue is: VanDecar J.C., Russo R.M., James D.E., Ambeh W.B., Franke M. (2003). Aseismic continuation of the Lesser Antilles slab beneath northeastern Venezuela. Journal of Geophysical Research, https://doi.org/10.1029/2001JB000884. Please note the format of such citations should be in the same style as all other references in the paper.

Web references
As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

Data references
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

Preprint references
Where a preprint has subsequently become available as a peer-reviewed publication, the formal publication should be used as the reference. If there are preprints that are central to your work or that cover crucial developments in the topic, but are not yet formally published, these may be referenced. Preprints should be clearly marked as such, for example by including the word preprint, or the name of the preprint server, as part of the reference. The preprint DOI should also be provided.

References in a special issue
Please ensure that the words 'this issue' are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

Reference management software
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal's style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.

Reference formatting
There are no strict requirements on reference formatting at submission. References can be in any style or format as long as the style is consistent. Where applicable, author(s) name(s), journal title/book title, chapter title/article title, year of publication, volume number/book chapter and the article number or pagination must be present. Use of DOI is highly encouraged. The reference style used by the journal will be applied to the accepted article by Elsevier at the proof stage. Note that missing data will be highlighted at proof stage for the author to correct. If you do wish to format the references yourself they should be arranged according to the following examples:

Reference style
Text: Indicate references by number(s) in square brackets in line with the text. The actual authors can be referred to, but the reference number(s) must always be given.
Example: '..... as demonstrated [3,6]. Barnaby and Jones [8] obtained a different result ....'
List: Number the references (numbers in square brackets) in the list in the order in which they appear in the text.
Examples:
Reference to a journal publication:
Reference to a journal publication with an article number:
Reference to a book:
Reference to a chapter in an edited book:
Reference to a website:
Reference to a dataset:
Reference to software:

Journal abbreviation source
Journal names should be abbreviated according to CAS (Chemical Abstracts Service): http://www.cas.org/sent.html.

Data visualization
Include interactive data visualizations in your publication and let your readers interact and engage more closely with your research. Follow the instructions here to find out about available data visualization options and how to include them with your article.

Research data
This journal requires and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings, which may also include software, code, models, algorithms, protocols, methods and other useful materials related to the project.

Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. When sharing data in one of these ways, you are expected to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

Appeals Policy
You as an author may appeal an editorial decision within 30 days of receipt of the decision to decline a manuscript for publication, please email us at Trac.ees@elsevier.com summarizing the scientific basis on which you wish you appeal and including the manuscript number in the subject line of your email. The basis for an appeal must be set forth clearly and fully in writing by the corresponding author. The handing editor and, as needed, editorial team will consider your appeal and respond to you once they have done so. Please note that when your paper is under appeal at TrAC, we regard it as being under active consideration, so please let us know immediately if you decide to submit to another journal instead. The editor's decision may be appealed only if the decision to decline involved a serious mistake, and not merely a judgment call that could have gone either way. Only one appeal is permitted per manuscript, and decisions on appeals are final. New submissions take precedence for the editors over appeals.

AFTER ACCEPTANCE
Proofs
One set of page proofs (as PDF files) will be sent by e-mail to the corresponding author (if we do not have an e-mail address then paper proofs will be sent by post) or a link will be provided in the e-mail so that authors can download the files themselves. To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Elsevier now provides authors with PDF proofs which can be annotated; for this you will need to download the free Adobe Reader, version 9 (or higher). Instructions on how to annotate PDF files will accompany the proofs (also given online). The exact system requirements are given at the Adobe site.
If you do not wish to use the PDF annotations function, you may list the corrections (including replies to the Query Form) and return them to Elsevier in an e-mail. Please list your corrections quoting line number. If, for any reason, this is not possible, then mark the corrections and any other comments (including replies to the Query Form) on a printout of your proof and scan the pages and return via e-mail. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. We will do everything possible to get your article published quickly and accurately. It is important to ensure that all corrections are sent back to us in one communication: please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.

Offprints
The corresponding author will, at no cost, receive a customized Share Link providing 50 days free access to the final published version of the article on ScienceDirect. The Share Link can be used for sharing the article via any communication channel, including email and social media. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Corresponding authors who have published their article gold open access do not receive a Share Link as their final published version of the article is available open access on ScienceDirect and can be shared through the article DOI link.

AUTHOR INQUIRIES
Visit the Elsevier Support Center to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch.
You can also check the status of your submitted article or find out when your accepted article will be published.
