DESCRIPTION

Revista Médica Clínica Las Condes is the scientific journal of Clínica las Condes, a Chilean private hospital of high complexity, associated to the Faculty of Medicine of the Universidad de Chile, and recognized by The Joint Commission International. This is a biomedical review journal and is published every two months. It also publishes original studies and clinical or radiological cases, in all the medical specialties.

Each edition has a main topic, planned by the editorial board, with an invited editor who is a specialist on the topic. Different articles are developed in detail around the principal topic, and written by highly qualified authors, from different Chilean or foreign health institutions. All the articles are submitted to peer review.

The aim of Revista Médica Clinica Las Condes is to offer a high level of up-to-date knowledge for health professionals, and to be a teaching tool for undergraduates and graduate medical students.

EDITORIAL BOARD

Editor-in-Chief
Jaime Arriagada S., Hospital Clínica Las Condes, Santiago, Chile

Co-Editor-in Chief
Patricio Burdiles P., Hospital Clínica Las Condes, Santiago, Chile

Managing Editor
Magdalena Castro C., Hospital Clínica Las Condes, Santiago, Chile
Maria Idalia Sepúlveda Sch., Hospital Clínica Las Condes, Santiago de Chile, Chile

Associate Editor
Juan Pablo Álvarez A., Hospital Clínica Las Condes, Santiago, Chile
Susana Benítez S., Hospital Clínica Las Condes, Santiago de Chile, Chile
Sonia Kunstmann F., Hospital Clínica Las Condes, Santiago de Chile, Chile
Armando Ortiz P., Hospital Clínica Las Condes, Santiago, Chile

**Editorial Board Member**

Guillermo Acuña L., Hospital del Trabajador, Santiago de Chile, Chile
Javier Brahm B., Hospital Clínico JJ Aguirre, Santiago, Chile
Ricardo Bustamante, Hospital de Urgencia Asistencia Pública de Santiago, Santiago, Chile
Carlos Celis M., University of Glasgow, Glasgow, UK
Raul J. Gazmuri, Rosalind Franklin University of Med. and Science, Chicago, USA
Josep M. Grau Junyet, Universitat de Barcelona, Barcelona, Spain
Carlos Guillén Astete, Hospital Universitario Ramon y Cajal, Madrid, Spain
Eric Jané Salas, Facultad de Medicina y Ciencias de la Salud, Universitat de Barcelona, Barcelona, Spain
Juan Carlos Kase S., Atlanta VA Medical Center, Emory University School of Medicine, Atlanta, USA
Carlos Manterola D., Universidad de la Frontera, Temuco, Chile
Gonzalo Nazar, Hospital Clínica Las Condes, Santiago, Chile
Miguel O’Ryan G., Universidad de Chile, Santiago de Chile, Chile
Enrique Oyarzun E., Clínica Universidad de los Andes, Santiago, Chile
Justo Padilla Y., Instituto Nacional de Salud del Niño - San Borja, Lima, Peru
Carlos A. Pérez H., Hospital San Jorge, Bogotá, Colombia
Fanny Petermann, University of Glasgow, Glasgow, UK
Jorge Sapunar Z., Universidad de la Frontera, Temuco, Chile
Hamlet Suarez G., British Hospital, Montevideo, Uruguay
Carlos Suarez N., Fundación de Investigación e Innovación de Asturias, Universidad de Oviedo, Oviedo, Spain
Rodrigo Tagle V., Pontificia Universidad Católica de Chile, Santiago, Chile
GUIDE FOR AUTHORS

INTRODUCTION

Revista Médica Clínica Las Condes (RMCLC) publishes bibliographic reviews, updates, clinical experiences from medical practice and clinical cases, in all medical specialties.

Each issue has a main topic, planned by the editorial board with an invited editor, who is a specialist in the field. Several articles are developed in detail around the main topic, written by highly qualified authors, from different Chilean or foreign health institutions.

All manuscripts are double blind peer reviewed. The aim of Revista Médica Clínica Las Condes is to offer a high level of update knowledge for health professionals, and also to be a teaching tool for undergraduates and graduate medical students.

Types of article

Reviews

These are review articles related to the central monographic topic proposed for each issue of the journal. The authors will provide an updated and objective view, based on the most relevant and current publications on the subject to be reviewed. The authors will not have to give their own view/opinion about the topic in question, but they will have to provide a summary of the state-of-the-art in an organized, structured, and adequate manner. As a rule, reviews will be commissioned by the Editors of RMCLC to expert authors, who have experience and publications in the subject under review.

Review articles will always be peer reviewed, and the final decision will be made on the basis of the comments from the expert reviewers and the Editors.

First page: Title in Spanish and English. The author and co-authors, with their affiliations, summary of no more than 200 words, in Spanish and English. Keywords in Spanish and English, between 3 and 6 keywords (according to Mesh Pubmed data). Declaration of conflicts of interest by the author and co-authors.

Manuscript: A maximum manuscript extension of 3500 words will be accepted. It must contain the text with no more than 50 bibliographical references, with the Vancouver style.

Figures and tables: A maximum total number of 6 figures and/or 6 tables will be accepted. The figures that are images that come from people, of any type (photos, radiological), must have the authorization of these to be published. All figures and tables must be numbered, cited in the text and contain title and caption.

Original articles

These will be original studies that offer novel information, of very broad interest to national and international scientific communities, whose specific data have not been published in any other journal. The studies will always be prospective and will show the results of research projects or the study design of projects that are still under way. All the information contained in the submitted articles will have to be original, and manuscripts reporting results previously reproduced in other journals will not be accepted for publication in the journal. In the cover letter (see below), the original nature of the manuscript contents, which will be the authors' responsibility, will be made explicitly clear. All the submitted manuscripts will always be peer-reviewed, and the final decision will be made on the basis of the comments from the expert reviewers and the Editors. When writing the articles, authors are advised to use the international guidelines for the report of health-related research results:

Clinical trials: CONSORT (http://www.consort-statement.org/). Besides, all trials must be registered in one of the international databases, and the number of the corresponding registry will always be indicated.

Articles involving diagnostic tests: STARD (http://www.stard-statement.org/).
Systematic reviews and metaanalysis: PRISMA (http://www.prisma-statement.org/).

For other types of research studies, verify the corresponding guidelines in the initiative EQUATOR (http://www.equator-network.org/).

Articles will have a maximum length of 3,000 words. If this length is exceeded, proper justification will be given by the authors in the cover letter. A maximum of 3 figures and 4 tables will be accepted. A maximum of 40 bibliographical references can be included. Although the number of authors will not be limited, they must have made a significant contribution to the manuscript results and writing. In the cover letter, in a totally independent document, the specific contribution of each author will always be specified.

The manuscripts should be structured in the sections: Introduction, Methods, Results and Discussion, as well as an abstract in Spanish and English of a maximum of 250 words structured in the sections: Introduction, Methods, Results and Conclusions, and between 3 and 6 words key.

Short Communications

Short communications are short documents that present original and significant material for rapid dissemination. For example, a short communication may focus on a particular aspect of a problem or on a new finding that was left with a significant impact. The short articles can be, among others: discovery or vanguard theory, novelty in simulation and modeling, elucidation of mechanisms. Since communications are expected to have a greater than average impact in the field instead of reporting on incremental research, they will receive a prioritized and rapid publication. It must not have been published in another magazine. Short communications will appear at the end of the thematic sections in the table of contents of the journal. Each article begins with “Short Communication”: followed by the title. Short communications are limited to a maximum of 2500 words and are not subdivided. They must contain a title in Spanish and English, a summary in Spanish and English, no more than 100 words, a maximum of six keywords in Spanish and English, a main body, references (no more than 15). Figures or tables maximum 4 combined, with authorizations for publication, if applicable.

Clinical Reports/Radiological Clinical Reports

For this section, articles describing a case about a patient will be considered, either in the clinical setting or in the radiological field, because its publication is considered to be a contribution to the evidence on a particular pathology and will help to increase medical knowledge. The text will have a maximum of 1700 words, without including the legends of the figures or the bibliography. The bibliography should be limited to a maximum of 10 references. The tables and figures can not be more than 4 in total. The summary in Spanish and English can have a maximum of 200 words and must be structured: Objective, Clinical report, Results and Conclusions. The tables and figures can not be more than 4 in total. The number of keywords will be between 3 and 6. Up to 4 authors are accepted as a maximum.

The manuscript must include a statement that the publication of the case had the informed consent of the patient, or in the case that the latter can not deliver it, the closest relative, guardian or legal guardian. The consent is for the publication of the clinical information, images or other background that the manuscript needs.

Contact details for submission
You can send your manuscript at https://www.editorialmanager.com/rmclc/

Language
This journal is published in Spanish language.

Submission checklist
You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

Ensure that the following items are present:

One author has been designated as the corresponding author with contact details:
• E-mail address
• Full postal address

All necessary files have been uploaded:

**Manuscript:**
• Include keywords
• All figures (include relevant captions)
• All tables (including titles, description, footnotes)
• Ensure all figure and table citations in the text match the files provided
• Indicate clearly if color should be used for any figures in print

**Graphical Abstracts / Highlights files** (where applicable)

**Supplemental files** (where applicable)

Further considerations
• Manuscript has been 'spell checked' and 'grammar checked'
• All references mentioned in the Reference List are cited in the text, and vice versa
• Permission has been obtained for use of copyrighted material from other sources (including the Internet)
• A competing interests statement is provided, even if the authors have no competing interests to declare
• Journal policies detailed in this guide have been reviewed
• Referee suggestions and contact details provided, based on journal requirements

For further information, visit our [Support Center](www.elsevier.com/locate/rmclc).

**BEFORE YOU BEGIN**

**Ethics in publishing**
Please see our information pages on [Ethics in publishing](www.elsevier.com/locate/rmclc) and [Ethical guidelines for journal publication](www.elsevier.com/locate/rmclc).

**Studies in humans and animals**
If the work involves the use of human subjects, the author should ensure that the work described has been carried out in accordance with [The Code of Ethics of the World Medical Association (Declaration of Helsinki)](www.elsevier.com/locate/rmclc) for experiments involving humans. The manuscript should be in line with the [Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals](www.elsevier.com/locate/rmclc) and aim for the inclusion of representative human populations (sex, age and ethnicity) as per those recommendations. The terms **sex** and **gender** should be used correctly.

Authors should include a statement in the manuscript that informed consent was obtained for experimentation with human subjects. The privacy rights of human subjects must always be observed.

All animal experiments should comply with the [ARRIVE guidelines](www.elsevier.com/locate/rmclc) and should be carried out in accordance with the U.K. Animals (Scientific Procedures) Act, 1986 and associated guidelines, [EU Directive 2010/63/EU for animal experiments](www.elsevier.com/locate/rmclc), or the National Institutes of Health guide for the care and use of Laboratory animals (NIH Publications No. 8023, revised 1978) and the authors should clearly indicate in the manuscript that such guidelines have been followed. The sex of animals must be indicated, and where appropriate, the influence (or association) of sex on the results of the study.

**Declaration of interest**
All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential competing interests include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. Authors must disclose any interests in two places: 1. A summary declaration of interest statement in the title page file (if double-blind) or the manuscript file (if single-blind). If there are no interests to declare then please state this: 'Declarations of interest: none'. This summary statement will be ultimately published if the article is accepted. 2. Detailed disclosures as part of a separate Declaration of Interest form, which forms part of the journal's official records. It is important for potential interests to be declared in both places and that the information matches. [More information](www.elsevier.com/locate/rmclc).
Submission declaration and verification
Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. To verify originality, your article may be checked by the originality detection service Crossref Similarity Check.

Preprints
Please note that preprints can be shared anywhere at any time, in line with Elsevier's sharing policy. Sharing your preprints e.g. on a preprint server will not count as prior publication (see 'Multiple, redundant or concurrent publication' for more information).

Authorship
All authors should have made substantial contributions to all of the following: (1) the conception and design of the study, or acquisition of data, or analysis and interpretation of data, (2) drafting the article or revising it critically for important intellectual content, (3) final approval of the version to be submitted.

Changes to authorship
Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed.

Clinical trial results
In line with the position of the International Committee of Medical Journal Editors, the journal will not consider results posted in the same clinical trials registry in which primary registration resides to be prior publication if the results posted are presented in the form of a brief structured (less than 500 words) abstract or table. However, divulging results in other circumstances (e.g., investors' meetings) is discouraged and may jeopardise consideration of the manuscript. Authors should fully disclose all posting in registries of results of the same or closely related work.

Registration of clinical trials
Registration in a public trials registry is a condition for publication of clinical trials in this journal in accordance with International Committee of Medical Journal Editors recommendations. Trials must register at or before the onset of patient enrolment. The clinical trial registration number should be included at the end of the abstract of the article. A clinical trial is defined as any research study that prospectively assigns human participants or groups of humans to one or more health-related interventions to evaluate the effects of health outcomes. Health-related interventions include any intervention used to modify a biomedical or health-related outcome (for example drugs, surgical procedures, devices, behavioural treatments, dietary interventions, and process-of-care changes). Health outcomes include any biomedical or health-related measures obtained in patients or participants, including pharmacokinetic measures and adverse events. Purely observational studies (those in which the assignment of the medical intervention is not at the discretion of the investigator) will not require registration.
Elsevier supports responsible sharing
Find out how you can share your research published in Elsevier journals.

Role of the funding source
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement then this should be stated.

Funding body agreements and policies
Elsevier has established a number of agreements with funding bodies which allow authors to comply with their funder's open access policies. Some funding bodies will reimburse the author for the gold open access publication fee. Details of existing agreements are available online.

Open access
This is an open access journal: all articles will be immediately and permanently free for everyone to read and download. To provide open access, this journal has an open access fee (also known as an article publishing charge APC) which needs to be paid by the authors or on their behalf, e.g., by their research funder or institution. Permitted third party (re)use is defined by the following Creative Commons user licenses:

Creative Commons Attribution-NonCommercial-NoDerivs (CC BY-NC-ND)
For non-commercial purposes, let others distribute and copy the article, and to include in a collective work (such as an anthology), as long as they credit the author(s) and provided they do not alter or modify the article.

No fee is payable by the author as publishing costs are covered by the owner of the journal (Clinica Las Condes).

Elsevier Researcher Academy
Researcher Academy is a free e-learning platform designed to support early and mid-career researchers throughout their research journey. The "Learn" environment at Researcher Academy offers several interactive modules, webinars, downloadable guides and resources to guide you through the process of writing for research and going through peer review. Feel free to use these free resources to improve your submission and navigate the publication process with ease.

Language (usage and editing services)
Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the English Language Editing service available from Elsevier's Author Services.

Informed consent and patient details
Studies on patients or volunteers require ethics committee approval and informed consent, which should be documented in the paper. Appropriate consents, permissions and releases must be obtained where an author wishes to include case details or other personal information or images of patients and any other individuals in an Elsevier publication. Written consents must be retained by the author but copies should not be provided to the journal. Only if specifically requested by the journal in exceptional circumstances (for example if a legal issue arises) the author must provide copies of the consents or evidence that such consents have been obtained. For more information, please review the Elsevier Policy on the Use of Images or Personal Information of Patients or other Individuals. Unless you have written permission from the patient (or, where applicable, the next of kin), the personal details of any patient included in any part of the article and in any supplementary materials (including all illustrations and videos) must be removed before submission.

Submission
Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

Submit your article
Please submit your article via https://www.editorialmanager.com/rmclc/
**Referees**
Please submit the names and institutional e-mail addresses of several potential referees. For more details, visit our Support site. Note that the editor retains the sole right to decide whether or not the suggested reviewers are used.

**PREPARATION**

**Peer review**
This journal operates a double blind review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. More information on types of peer review.

**Double-blind review**
This journal uses double-blind review, which means the identities of the authors are concealed from the reviewers, and vice versa. More information is available on our website. To facilitate this, please include the following separately:
*Title page (with author details):* This should include the title, authors' names, affiliations, acknowledgements and any Declaration of Interest statement, and a complete address for the corresponding author including an e-mail address.
*Blinded manuscript (no author details):* The main body of the paper (including the references, figures, tables and any acknowledgements) should not include any identifying information, such as the authors' names or affiliations.

**Use of word processing software**
It is important that the file be saved in the native format of the word processor used. The text should be in single-column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. In particular, do not use the word processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc. When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). Note that source files of figures, tables and text graphics will be required whether or not you embed your figures in the text. See also the section on Electronic artwork.

To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

**Article structure**

**Subdivision - unnumbered sections**
Divide your article into clearly defined sections. Each subsection is given a brief heading. Each heading should appear on its own separate line. Subsections should be used as much as possible when cross-referencing text: refer to the subsection by heading as opposed to simply 'the text'.

**Introduction**
State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results.

**Material and methods**
Provide sufficient details to allow the work to be reproduced by an independent researcher. Methods that are already published should be summarized, and indicated by a reference. If quoting directly from a previously published method, use quotation marks and also cite the source. Any modifications to existing methods should also be described.

**Results**
Results should be clear and concise.

**Discussion**
This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.
Conclusions
The main conclusions of the study may be presented in a short Conclusions section, which may stand
alone or form a subsection of a Discussion or Results and Discussion section.

Appendices
If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in
appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix,
Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

Essential title page information
• **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid
abbreviations and formulae where possible.
• **Author names and affiliations.** Please clearly indicate the given name(s) and family name(s)
of each author and check that all names are accurately spelled. You can add your name between
parentheses in your own script behind the English transliteration. Present the authors' affiliation
addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-
case superscript letter immediately after the author's name and in front of the appropriate address.
Provide the full postal address of each affiliation, including the country name and, if available, the
e-mail address of each author.
• **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing
and publication, also post-publication. This responsibility includes answering any future queries about
Methodology and Materials. Ensure that the e-mail address is given and that contact details
are kept up to date by the corresponding author.
• **Present/permanent address.** If an author has moved since the work described in the article was
done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as
a footnote to that author's name. The address at which the author actually did the work must be
retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

Structured abstract
A structured abstract, by means of appropriate headings, should provide the context or background for
the research and should state its purpose, basic procedures (selection of study subjects or laboratory
animals, observational and analytical methods), main findings (giving specific effect sizes and their
statistical significance, if possible), and principal conclusions. It should emphasize new and important
aspects of the study or observations.

The headings will consist of: Introduction, Methods, Results and Conclusions.

Keywords
Immediately after the abstract, provide a maximum of 6 keywords, using American spelling and
avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing
with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords
will be used for indexing purposes.

Abbreviations
Define abbreviations that are not standard in this field in a footnote to be placed on the first page
of the article. Such abbreviations that are unavoidable in the abstract must be defined at their first
mention there, as well as in the footnote. Ensure consistency of abbreviations throughout the article.

Acknowledgements
Collate acknowledgements in a separate section at the end of the article before the references and do
not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those
individuals who provided help during the research (e.g., providing language help, writing assistance
or proof reading the article, etc.).

Formatting of funding sources
List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy];
the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes
of Peace [grant number aaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When
funding is from a block grant or other resources available to a university, college, or other research
institution, submit the name of the institute or organization that provided the funding.
If no funding has been provided for the research, please include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Units
Follow internationally accepted rules and conventions: use the international system of units (SI). If other units are mentioned, please give their equivalent in SI.

Artwork

Image manipulation
Whilst it is accepted that authors sometimes need to manipulate images for clarity, manipulation for purposes of deception or fraud will be seen as scientific ethical abuse and will be dealt with accordingly. For graphical images, this journal is applying the following policy: no specific feature within an image may be enhanced, obscured, moved, removed, or introduced. Adjustments of brightness, contrast, or color balance are acceptable if and as long as they do not obscure or eliminate any information present in the original. Nonlinear adjustments (e.g., changes to gamma settings) must be disclosed in the figure legend.

Electronic artwork

General points
• Make sure you use uniform lettering and sizing of your original artwork.
• Embed the used fonts if the application provides that option.
• Aim to use the following fonts in your illustrations: Arial, Courier, Times New Roman, Symbol, or use fonts that look similar.
• Number the illustrations according to their sequence in the text.
• Use a logical naming convention for your artwork files.
• Provide captions to illustrations separately.
• Size the illustrations close to the desired dimensions of the published version.
• Submit each illustration as a separate file.
• Ensure that color images are accessible to all, including those with impaired color vision.

A detailed guide on electronic artwork is available.

You are urged to visit this site; some excerpts from the detailed information are given here.

Formats
If your electronic artwork is created in a Microsoft Office application (Word, PowerPoint, Excel) then please supply ‘as is’ in the native document format. Regardless of the application used other than Microsoft Office, when your electronic artwork is finalized, please ‘Save as’ or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):
EPS (or PDF): Vector drawings, embed all used fonts.
TIFF (or JPEG): Color or grayscale photographs (halftones), keep to a minimum of 300 dpi.
TIFF (or JPEG): Bitmapped (pure black & white pixels) line drawings, keep to a minimum of 1000 dpi.
TIFF (or JPEG): Combinations bitmapped line/half-tone (color or grayscale), keep to a minimum of 500 dpi.

Please do not:
• Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); these typically have a low number of pixels and limited set of colors;
• Supply files that are too low in resolution;
• Submit graphics that are disproportionately large for the content.

Color artwork
Please make sure that artwork files are in an acceptable format (TIFF (or JPEG), EPS (or PDF) or MS Office files) and with the correct resolution. If, together with your accepted article, you submit usable color figures then Elsevier will ensure, at no additional charge, that these figures will appear in color online (e.g., ScienceDirect and other sites) in addition to color reproduction in print. Further information on the preparation of electronic artwork.

Figure captions
Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.
Tables
Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

References

Citation in text
Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.

Reference links
Increased discoverability of research and high quality peer review are ensured by online links to the sources cited. In order to allow us to create links to abstracting and indexing services, such as Scopus, CrossRef and PubMed, please ensure that data provided in the references are correct. Please note that incorrect surnames, journal/book titles, publication year and pagination may prevent link creation. When copying references, please be careful as they may already contain errors. Use of the DOI is highly encouraged.

A DOI is guaranteed never to change, so you can use it as a permanent link to any electronic article. An example of a citation using DOI for an article not yet in an issue is: VanDecar J.C., Russo R.M., James D.E., Ambeh W.B., Franke M. (2003). Aseismic continuation of the Lesser Antilles slab beneath northeastern Venezuela. Journal of Geophysical Research, https://doi.org/10.1029/2001JB000884. Please note the format of such citations should be in the same style as all other references in the paper.

Web references
As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

Data references
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

References in a special issue
Please ensure that the words 'this issue' are added to any references in the list (and any citations in the text) to other articles in the same Special Issue.

Reference management software
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal's style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.

Reference style
Text: Indicate references by superscript numbers in the text. The actual authors can be referred to, but the reference number(s) must always be given.

List: Number the references in the list in the order in which they appear in the text.

Examples:
Reference to a journal publication:
Reference to a journal publication with an article number:
Reference to a book:
Reference to a chapter in an edited book:
Reference to a website:
Reference to a dataset:
Note shortened form for last page number. e.g., 51–9, and that for more than 6 authors the first 6 should be listed followed by 'et al.' For further details you are referred to 'Uniform Requirements for Manuscripts submitted to Biomedical Journals' (*J Am Med Assoc* 1997;277:927–34)(see also [Samples of Formatted References](https://www.elsevier.com)).

*Journal abbreviations source*
Journal names should be abbreviated according to the [List of Title Word Abbreviations](https://www.elsevier.com).

**AFTER ACCEPTANCE**

**AUTHOR INQUIRIES**
Visit the [Elsevier Support Center](https://www.elsevier.com) to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch.
You can also check the status of your submitted article or find out when your accepted article will be published.
