DESCRIPTION

As a general surgical journal, covering all specialties, the International Journal of Surgery Open is dedicated to publishing original research, review articles, and more—all offering significant contributions to knowledge in clinical surgery, experimental surgery, surgical education and history. The Journal is a fully open-access online-only journal and authors are required to pay a fee for publication.

Upon publication all articles will be freely available for all to read on ScienceDirect. All articles will be published under a creative commons license with authors retaining ownership of the copyright.

EDITORIAL BOARD

Editor-in-Chief
David Rosin, The University of the West Indies at Cave Hill, Bridgetown, Barbados
surgical oncology

Managing and Executive Editor
Riaz Agha, Guy's and St Thomas' NHS Foundation Trust, London, United Kingdom
plastic surgery

Senior Editors
Raafat Afifi, Cairo University General Surgery Department, Cairo, Egypt
breast surgery, complex ventral hernia, surgical infection
Hasan B. Alam, University of Michigan, Michigan Medicine, Ann Arbor, United States of America
general surgery, trauma and critical care
Juan P Barret, Autonomous University of Barcelona, Barcelona, Spain
plastic surgery, reconstructive surgery, burn surgery
Ben Challacombe, Guy's and St Thomas' NHS Foundation Trust, London, United Kingdom
urology, prostate cancer, BPH, kidney and testes cancer, robotic surgery
Xiao-ping Chen, Huazhong University of Science and Technology, Wuhan, China
hepato-pancreato-biliary surgery
Rudy Leon De Wilde, Pius Hospital, Oldenburg, Germany
obstetrics, gynecology
Burcinc Ekser, Indiana University Division of Transplant Surgery, Indianapolis, United States of America
Transplant research, Transplant Immunology and Xenotransplantation
Herbert Hechtman, Harvard Medical School, Boston, United States of America
surgical oncology
Joseph W. Y. Lau, The Chinese University of Hong Kong Faculty of Medicine, Hong Kong, Hong Kong
general surgery, hepatopancreatobiliary surgery
Oliver Muensterer, Johannes Gutenberg University Mainz, Mainz, Germany
pediatric surgery, foregut surgery, pediatric trauma, minimal invasive surgery
Selwyn Rogers, The University of Chicago, Chicago, United States of America
trauma surgery
Jamsheer Talati, The Aga Khan University, Karachi, Pakistan
urology
Mangesh Thorat, Queen Mary University of London, London, United Kingdom
breast surgery, surgical oncology
Fu-Chan Wei, Chang Gung Medical Foundation, Taoyuan, Taiwan
plastic surgery, reconstructive surgery, head and neck reconstruction, toe-to-hand, anterolateral thigh flap, fibula flap, mandibullectomy

Associate Editors
Roberto Coppola, Campus Bio-Medico University, Roma, Italy
general surgery, vascular surgery, hepatobiliary surgery, pancreas surgery, digestive surgery, minimally invasive surgery, oncolgical surgery
Veeru Kasivisvanathan, University College London, London, United Kingdom
urology, oncology
Richard Keijzer, Winnipeg Regional Health Authority, Winnipeg, Canada
pediatric surgery
Boris Kirshtein, Soroka Medical Center, Be’er Sheva, Israel
general surgery, laparoscopic surgery, bariatric surgery

**James McCaul**, Bradford Teaching Hospitals NHS Foundation Trust, Bradford, United Kingdom
maxillofacial surgery, head and neck surgery, facial plastic surgery, cancer science

**Emma Rose McGlone**, Imperial College London, London, United Kingdom
metabolic surgery, bariatric surgery, gastrointestinal surgery

**Dattatraya Muzumdar**, KEM Hospital and Seth G S Medical College Department of Neurosurgery, Mumbai, India
epilepsy surgery, endoscopic skull base surgery

**Andy Petroianu**, Federal University of Minas Gerais, Belo Horizonte, Brazil
genereal surgery, oncological surgery, GI surgery

**Shahzad Raja**, Harefield Hospital Heart Surgery, London, United Kingdom
cardiotoracic surgery, adult cardiac surgery

**Kandiah Raveendran**, Hospital Fatimah, Ipoh, Malaysia
orthopaedic surgery

**Daniel Yeh**, Massachusetts General Hospital Division of Trauma Emergency Surgery & Surgical Critical Care, Boston, United States of America
general surgery, trauma surgery, surgical critical care

**Assistant Editors**

**Rafid R. Al-mahfoudh**, University of Oxford, Oxford, United Kingdom
neurosurgery, complex spine surgery

**Hussein M. H. M. Atta**, Boston Children's Hospital, Boston, Massachusetts, United States of America
general surgery, urology

**Mohammad M. Bashashati**, Texas Tech University Health Sciences Center El Paso, El Paso, Texas, United States of America
gastroenterology

**Somprakus S. Basu**, All India Institute of Medical Sciences - Rishikesh, Rishikesh, India
general surgery, colorectal surgery

**Andrew J. A.J. Beamish**, University of Gothenburg, Gothenburg, Sweden
general surgery, gastrointestinal surgery

**Anthony G. A. G. Charles**, University of North Carolina at Chapel Hill Program in the Humanities, Chapel Hill, North Carolina, United States of America
general surgery, trauma and critical care

**Nathan J. N. J. Curtis**, Imperial College London, London, United Kingdom
genereal surgery, colorectal surgery

**Amitava A. Das**, Indian Institute of Science Education and Research Kolkata Department of Chemical Sciences, Mohanpur, India
molecular recognition, supramolecular chemistry

**Susana Adriana S. A. Esquivel Gaón**, Oral and Maxillofacial Surgery, Mexico
oral surgery, maxillofacial surgery

**Claudio C. Gambardella**, University of Campania Luigi Vanvitelli, Napoli, Italy
gastrointestinal, bariatric and proctological surgery

**Juan J. Gómez Rivas**, La Paz University Hospital Urology Service, Madrid, Spain
urology

**Haytham H. Kaafarani**, Massachusetts General Hospital, Dept. of Surgery, Boston, Massachusetts, United States of America
trauma, emergency surgery, surgical critical care

**Yogesh Y. D. Kamat**, KMC Hospital, Mangaluru, India
knee and hip surgery

**Omar O. Khan**, St George's Hospital, London, United Kingdom
upper GI and bariatric surgery

**Laura L. Lorenzon**, University Hospital Agostino Gemelli, Rome, Italy
surgical oncology

**Todd T. Manning**, Austin Health, Heidelberg, Victoria, Australia
urology

**Alberto A. Meyer**, Sao Paulo University Faculty of Medicine Department of Gastroenterology, São Paulo, Brazil
GI surgery, surgical oncology, HPB surgery, medical education, abdominal wall repair

**Indraneil I. Mukherjee**, AdventHealth Tampa The Gastroenterology Center, Tampa, Florida, United States of America
minimal invasive foregut and HPB surgery

**Enyi E Ofo**, St George's University of London, London, United Kingdom
ENT surgery, head and neck surgery, thyroid and parathyroid surgery

**Prathamesh P. Pai**, Tata Memorial Centre, Mumbai, India
otorlaryngology head neck surgery, head and neck surgical oncology
Lena L. Perger, University of New Mexico Department of Surgery, Albuquerque, New Mexico, United States of America
pediatric surgery
Feng F. Sheng, Eastern Hepatobiliary Surgery Hospital, Shanghai, China
Hepatic surgery, Biliary surgery, Hepatocellular carcinoma (HCC), Intrahepatic cholangiocarcinoma (ICC), Multidisciplinary treatment
Alfredas A. Smailys, Lithuanian University of Health Sciences, Kaunas, Lithuania
orthopaedic surgery, joint replacement, infection
Paritosh P. Suman, NorthShore University HealthSystem, Evanston, Illinois, United States of America
general surgery
Dieter D.G. Weber, Royal Perth Hospital, Perth, Australia
trauma surgery, general surgery
Hongyi H. Zhu, Shanghai Jiao Tong University, Shanghai, China
orthopaedic surgery

Statistical Editors
Nora Donaldson, University of the Valley, Cali, Colombia
medical statistics, biostatistics
Mary Gray, American University, Washington, District of Columbia, United States of America
law, mathematics

Society Representatives
Josh Burke, President of the Association of Surgeons in Training, Leeds United Kingdom
Xiao-ping Chen, Huazhong University of Science and Technology, Wuhan, Hubei, China
hepato-pancreato-biliary surgery
Gene F. Coppa, Northwell Health, New Hyde Park, New York, United States of America
colorectal surgery
Harold Ellis, University of London, London, United Kingdom
general surgery
Che-Hung Leong, The University of Hong Kong, Pok Fu Lam, Hong Kong
urology, nephrology
Arthur Kwok-Cheung Li, Chinese University of Hong Kong, Hong Kong, China
general surgery
Ian McColl, King’s College London, London, United Kingdom
general surgery
John Norcini, Foundation for Advancement of International Medical Education and Research, Philadelphia, United States of America
no specialty
Susan Standring, King’s College London, London, United Kingdom
neurobiology
Lord Robert Winston, Imperial College London, London, United Kingdom
surgery, gynecology, fertility
Magdi Yacoub, Imperial College London National Heart and Lung Institute, London, United Kingdom
Cardiothoracic Surgery, Transplantation, Congenital Cardiac Surgery, Chain of Hope

Assistant Commissioning Editors
Ahmed Al-Jabir, King’s College London GKT School of Medical Education, London, United Kingdom
urology, minimally invasive surgery, history of medicine, surgical education
Zaid Alsafi, University College London, London, United Kingdom
ophthalmology, medical education
Thomas Franchi, The University of Sheffield, Sheffield, United Kingdom
neurosurgery, oral and maxillofacial surgery
Michelle Griffin, Stanford University, Stanford, California, United States of America
plastic surgery
Christos Iosifides, Barts and The London School of Medicine and Dentistry William Harvey Research Institute, London, United Kingdom
urology, ophthalmology, plastic surgery

Ahmed Kerwan, King's College London, London, United Kingdom
ophthalmology, general surgery

Mehdi Khan, University College London Medical School, London, United Kingdom
Pollution, resource limited environment, thoracic, fetal and neurosurgery

Ginimol Matthew, University College London, London, United Kingdom
junior doctor - no specialty yet

Maria Nicola, Imperial College Healthcare NHS Trust, London, United Kingdom
breast surgery, vascular surgery

Niamh O’Neill, Barts and The London School of Medicine and Dentistry William Harvey Research Institute, London, United Kingdom
plastic surgery, WALANT, laparoscopic surgery

Catrin Sohrabi, Barts and The London School of Medicine and Dentistry William Harvey Research Institute, London, United Kingdom
vascular surgery, general surgery

Editorial Board

Rajendra A Badwe, Tata Memorial Hospital, Mumbai, India
surgical oncology

Michael Boscoe, Harefield Hospital, Harefield, United Kingdom
anaesthetics, cardiothoracic, neurosurgery, hepatobiliary, vascular anaesthesia

Raphael Bueno, Harvard Medical School, Boston, Massachusetts, United States of America
thoracic surgery

Kris Chatamra, Bumrungrad International Hospital, Bangkok, Thailand
general surgery, breast surgery

Paul Coulthard, The University of Manchester, Manchester, United Kingdom
oral surgery, maxillofacial surgery

Anil d’Cruz, Tata Memorial Hospital, Mumbai, India
head and neck surgery, surgical oncology

Mahesh Desai, Muljibhai Patel Urological Hospital Department of Urology, Nadiad, India
general surgery, urology

David Green, King’s College Hospital, London, United Kingdom
anaesthesia for vascular surgery

Iraj Harirchi, Tehran University of Medical Sciences, Tehran, Iran
oncology

Doris Henne-Bruns, University Hospital Ulm, Ulm, Germany
general surgery, abdominal surgery

Delawir Kahn, University of Cape Town, Cape Town, South Africa
transplantation, liver regeneration

Xiaoxi Lin, Shanghai Jiao Tong University - Fahua Campus, Shanghai, China
plastic surgery

Ashok Mahapatra, All India Institute of Medical Sciences - Bhubaneswar, Bhubaneswar, India
neurosurgery

Indraneel Mittra, Tata Memorial Centre, Mumbai, India
cancer surgery

Vijay Narayansingh, The University of the West Indies at St Augustine Department of Clinical Surgical Sciences, St. Augustine, Trinidad and Tobago
general surgery, vascular surgery

Fabio Nicoli, Guy’s and St Thomas’ NHS Foundation Trust, London, United Kingdom
plastic and reconstructive surgery

Aníbal Núñez De Pierro, Acute Care General Hospital Juan A Fernández, Buenos Aires, Argentina
oncology

Ruben Orda, Tel Aviv University, Tel Aviv, Israel
general surgery

Vladimir Semiglazov, FSBI National Medical Research Center of Oncology named after N N Petrov, Sankt Petersburg, Russian Federation
oncology

Tejinder Singh, Christian Medical College and Hospital Ludhiana, Ludhiana, India
medical education

Barbara Smith, Massachusetts General Hospital, Boston, Massachusetts, United States of America
surgical oncology

Tehemton Udwadia, PD Hinduja National Hospital and Medical Research Centre, Mumbai, India
laparoscopic surgery, minimally invasive surgery

Michiel C. Warlé, Radboudumc, Nijmegen, Netherlands
vascular surgery, transplant surgery
**John Wee**, Brigham and Women's Hospital, Boston, Massachusetts, United States of America
thoracic surgery
**Martin Weiser**, Memorial Sloan Kettering Cancer Center, New York, New York, United States of America
colorectal surgery
**Zhao Fan Xia**, Changhai Hospital, Shanghai, China
burn surgery
**Yixin Zhang**, Shanghai Jiao Tong University School of Medicine, Shanghai, China
Microsurgery, Complex reconstruction, Burn surgery, Scar reconstruction
**Jun Zhong**, Shanghai Jiao Tong University School of Medicine, Shanghai, China
functional neurosurgery
GUIDE FOR AUTHORS

INTRODUCTION

_IJS Open_ is an online open access journal and is published as a sister title to the _International Journal of Surgery_.

Contact details

If you have any problem submitting your paper online please visit our [Support Centre](#).

Reporting Standards

The International Journal of Surgery Open has a policy of mandatory enforcement of all relevant reporting guidelines (see below). Please ensure your work follows the appropriate guidelines and the relevant completed checklist and flow diagram are submitted with your work. Please ensure you cite the relevant guideline in the methods section of your manuscript.

Randomised Controlled Trials

All randomised controlled trials submitted for publication in International Journal of Surgery must include a completed Consolidated Standards of Reporting Trials (CONSORT) flow chart and ensure that all elements in the CONSORT checklist are covered. A copy of the CONSORT checklist must be uploaded as supplemental material. Please refer to the CONSORT statement website at [http://www.consort-statement.org](http://www.consort-statement.org) for more information.

Systematic Reviews

Systematic reviews should be reported in accordance PRISMA (Preferred Reporting Items for Systematic Reviews and Meta-Analyses) Guidelines: Matthew J. Page, et al. The PRISMA 2020 statement: An updated guideline for reporting systematic reviews. International Journal of Surgery, 2021; 88; 105906. You must include the flow diagram as a figure and the checklist as supplemental material, which you can download from the above link. Please also upload a completed AMSTAR 2 checklist to aid the methodological quality of your article: [https://amstar.ca/Aamstar_Checklist.php](https://amstar.ca/Aamstar_Checklist.php) or [https://amstar.ca/docs/AMSTAR-2.pdf](https://amstar.ca/docs/AMSTAR-2.pdf).

Cohort, Case-control and Cross-sectional studies

Cohort, Case-control and Cross-sectional studies should all be compliant with the STROCSS criteria (Strengthening the reporting of cohort studies in surgery). Please see [http://www.strocssguideline.com](http://www.strocssguideline.com) and Agha RA, Abdall-Razak A, Crossley E, Dowlut N, Iosifidis C, Mathew G, for the STROCSS Group. STROCSS 2019 Guideline: Strengthening the reporting of cohort studies in surgery. - each study type has its own checklist which should be uploaded as a supplemental file.

Diagnostic, Quality Improvement and Qualitative studies

Diagnostic Studies must be reported in accordance with the STARD statement criteria (STAndards for the Reporting of Diagnostic accuracy studies) flow diagram and checklist please see [http://www.stard-statement.org/](http://www.stard-statement.org/). Quality Improvement studies must comply with the Standards for Quality Improvement Reporting Excellence (SQUIRE) criteria: [http://squire-statement.org](http://squire-statement.org). Qualitative studies require the Consolidated criteria for Reporting Qualitative Research (COREQ) checklist, please see: [http://intqhc.oxfordjournals.org/content/19/6/349.long](http://intqhc.oxfordjournals.org/content/19/6/349.long)

Health Economic Evaluation

Health Economic Evaluation studies must conform to the CHEERS statement: [http://www.bmj.com/content/346/bmj.f1049.pdf%2Bhtml](http://www.bmj.com/content/346/bmj.f1049.pdf%2Bhtml)

Tumour Marker Prognostic Study

Tumour Marker Prognostic studies must be reported in accordance with the REMARK criteria, please see [http://www.equator-network.org/resource-centre/library-of-health-research-reporting/reporting-guidelines/remark](http://www.equator-network.org/resource-centre/library-of-health-research-reporting/reporting-guidelines/remark)

Before and After Studies
Before and After studies measuring particular characteristics of a population or group of individuals at the end of an event or intervention, compares them with those characteristics before the event or intervention: then gauges the effects of the event or intervention. These studies must be compliant with the STROCSS criteria (Strengthening the reporting of cohort studies in surgery). Please see http://www.strocssguideline.com.

**Surgical Case Reports**
Please ensure your case report is compliant with the SCARE Guidelines and submit a completed SCARE checklist.

Please also ensure you state that the work has been reported in line with the SCARE criteria and cite the following paper:

**Surgical Case Series**
Please ensure your case series is compliant with the PROCESS Guidelines and submit a completed PROCESS checklist.

Please also ensure you state that the work has been reported in line with the PROCESS criteria and cite the following paper:

**Experimental Animal Studies**
Animal studies must be reported in accordance with the ARRIVE guidelines (Animals in Research: Reporting In Vivo Experiments) and must include the checklist as supplemental material. A blank form can be downloaded for completion here. An example of a completed checklist can be found at https://journals.plos.org/plosonline/article?id=10.1371/journal.pone.0106108#s5. (The example checklist is based on an original publication by Kilkenny C, Browne WJ, Cuthill IC, Emerson M, Altman DG (2010) Improving Bioscience Research Reporting: The ARRIVE Guidelines for Reporting Animal Research. PLoS Biol 8(6): e1000412. https://doi.org/10.1371/journal.pbio.1000412). The institutional protocol number should be included at the end of the abstract of the article.

**Perspective**
One body of text with no sub-titles. No Abstract. Word count limited to 1,000 words. References limited to 20. Figures/tables are limited to a maximum of 3 colour figures or tables.

**Submission checklist**
You can use this list to carry out a final check of your submission before you send it to the journal for review. Please check the relevant section in this Guide for Authors for more details.

Ensure that the following items are present:

One author has been designated as the corresponding author with contact details:
- E-mail address
- Full postal address

All necessary files have been uploaded:
*Manuscript:*
- Include keywords
- All figures (include relevant captions)
- All tables (including titles, description, footnotes)
- Ensure all figure and table citations in the text match the files provided
- Indicate clearly if color should be used for any figures in print

*Graphical Abstracts / Highlights files* (where applicable)

*Supplemental files* (where applicable)

Further considerations
- Manuscript has been 'spell checked' and 'grammar checked'
- All references mentioned in the Reference List are cited in the text, and vice versa
B.E.F.O.R.E Y.O.U B.E.G.I.N

**Ethics in publishing**
Please see our information on Ethics in publishing.

**Studies in humans and animals**
If the work involves the use of human subjects, the author should ensure that the work described has been carried out in accordance with The Code of Ethics of the World Medical Association (Declaration of Helsinki) for experiments involving humans. The manuscript should be in line with the Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals and aim for the inclusion of representative human populations (sex, age and ethnicity) as per those recommendations. The terms sex and gender should be used correctly.

Authors should include a statement in the manuscript that informed consent was obtained for experimentation with human subjects. The privacy rights of human subjects must always be observed.

All animal experiments should comply with the ARRIVE guidelines and should be carried out in accordance with the U.K. Animals (Scientific Procedures) Act, 1986 and associated guidelines, EU Directive 2010/63/EU for animal experiments, or the National Research Council's Guide for the Care and Use of Laboratory Animals and the authors should clearly indicate in the manuscript that such guidelines have been followed. The sex of animals must be indicated, and where appropriate, the influence (or association) of sex on the results of the study.

**Informed consent and patient details**
Studies on patients or volunteers require ethics committee approval and informed consent, which should be documented in the paper. Appropriate consents, permissions and releases must be obtained where an author wishes to include case details or other personal information or images of patients and any other individuals in an Elsevier publication. Written consents must be retained by the author but copies should not be provided to the journal. Only if specifically requested by the journal in exceptional circumstances (for example if a legal issue arises) the author must provide copies of the consents or evidence that such consents have been obtained. For more information, please review the Elsevier Policy on the Use of Images or Personal Information of Patients or other Individuals. Unless you have written permission from the patient (or, where applicable, the next of kin), the personal details of any patient included in any part of the article and in any supplementary materials (including all illustrations and videos) must be removed before submission.

**Declaration of interest**
All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work. Examples of potential competing interests include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. Authors must disclose any interests in two places: 1. A summary declaration of interest statement in the title page file (if double anonymized) or the manuscript file (if single anonymized). If there are no interests to declare then please state this: 'Declarations of interest: none’. 2. Detailed disclosures as part of a separate Declaration of Interest form, which forms part of the journal's official records. It is important for potential interests to be declared in both places and that the information matches. More information.

**Submission declaration and verification**
Submission of an article implies that the work described has not been published previously (except in the form of an abstract, a published lecture or academic thesis, see 'Multiple, redundant or concurrent publication' for more information), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in
Use of inclusive language
Inclusive language acknowledges diversity, conveys respect to all people, is sensitive to differences, and promotes equal opportunities. Content should make no assumptions about the beliefs or commitments of any reader; contain nothing which might imply that one individual is superior to another on the grounds of age, gender, race, ethnicity, culture, sexual orientation, disability or health condition; and use inclusive language throughout. Authors should ensure that writing is free from bias, stereotypes, slang, reference to dominant culture and/or cultural assumptions. We advise to seek gender neutrality by using plural nouns ("clinicians, patients/clients") as default/wherever possible to avoid using "he, she," or "he/she." We recommend avoiding the use of descriptors that refer to personal attributes such as age, gender, race, ethnicity, culture, sexual orientation, disability or health condition unless they are relevant and valid. When coding terminology is used, we recommend to avoid offensive or exclusionary terms such as "master", "slave", "blacklist" and "whitelist". We suggest using alternatives that are more appropriate and (self-) explanatory such as "primary", "secondary", "blocklist" and "allowlist". These guidelines are meant as a point of reference to help identify appropriate language but are by no means exhaustive or definitive.

Contributorship
The IJS lists contributors in two ways. Firstly, we publish a list of authors' names at the beginning of the paper and, secondly, we list contributors (some of whom may not be included as authors) at the end of the paper, giving details of who did what in planning, conducting, and reporting the work. One or more of these contributors are listed as guarantors of the paper. The guarantor accepts full responsibility for the work and/or the conduct of the study, had access to the data, and controlled the decision to publish.

Authorship
All authors should have made substantial contributions to all of the following: (1) the conception and design of the study, or acquisition of data, or analysis and interpretation of data, (2) drafting the article or revising it critically for important intellectual content, (3) final approval of the version to be submitted.

When submitting a paper authors must complete the Authorship form, which can be downloaded here. This form confirms that all authors agree to publication if the paper is accepted and allows authors to declare any conflicts of interest, sources of funding and ethical approval (if required). Please download the form and submit it with your paper. Submissions that do not include a completed form will be returned without review.

Registration of Research
The World Medical Association's Declaration of Helsinki 2013 states in article 35: ‘Every research study involving human subjects must be registered in a publicly accessible database before recruitment of the first subject’. Editors of IJS require that all types of research studies involving human participants should be registered prospectively, but failing that retrospectively. There are many places to register your research, and you can choose which is the most suitable for your needs:

- https://www.clinicaltrials.gov/ - for all human studies - free
- http://www.chictr.org.cn/index.aspx - for all human studies - free
- https://www.researchregistry.com/ - for all human studies - charge
- https://www.isrctn.com/ - for all human studies - charge
- Prospero - for systematic reviews - free
- There are many national registries approved by the UN that can be found here

Elsevier does not support or endorse any registry.

Once registered, you will need to submit your assigned Unique Identifying Number (UIN) from your registration body as a mandatory part of your submission.

Changes to authorship
Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Any addition, deletion or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal Editor. To request such a change, the Editor must receive the following from the corresponding author: (a) the reason

English or in any other language, including electronically without the written consent of the copyright-holder. To verify originality, your article may be checked by the originality detection service Crossref Similarity Check.
for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed. Only in exceptional circumstances will the Editor consider the addition, deletion or rearrangement of authors after the manuscript has been accepted. While the Editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the Editor will result in a corrigendum.

**Reporting clinical trials**
Randomized controlled trials should be presented according to the CONSORT guidelines. At manuscript submission, authors must provide the CONSORT checklist accompanied by a flow diagram that illustrates the progress of patients through the trial, including recruitment, enrollment, randomization, withdrawal and completion, and a detailed description of the randomization procedure. The CONSORT checklist and template flow diagram are available online.

**Registration of clinical trials**
Registration in a public trials registry is a condition for publication of clinical trials in this journal in accordance with International Committee of Medical Journal Editors recommendations. Trials must register at or before the onset of patient enrolment. The clinical trial registration number should be included at the end of the abstract of the article. A clinical trial is defined as any research study that prospectively assigns human participants or groups of humans to one or more health-related interventions to evaluate the effects of health outcomes. Health-related interventions include any intervention used to modify a biomedical or health-related outcome (for example drugs, surgical procedures, devices, behavioural treatments, dietary interventions, and process-of-care changes). Health outcomes include any biomedical or health-related measures obtained in patients or participants, including pharmacokinetic measures and adverse events. Purely observational studies (those in which the assignment of the medical intervention is not at the discretion of the investigator) will not require registration.

**Copyright**
Upon acceptance of an article, authors will be asked to complete a 'License Agreement' (see more information on this). Permitted third party reuse of open access articles is determined by the author's choice of user license.

**Author rights**
As an author you (or your employer or institution) have certain rights to reuse your work. More information.

**Elsevier supports responsible sharing**
Find out how you can share your research published in Elsevier journals.

**Role of the funding source**
You are requested to identify who provided financial support for the conduct of the research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing of the report; and in the decision to submit the article for publication. If the funding source(s) had no such involvement, it is recommended to state this.

**Open access**
Please visit our Open Access page for more information.

**Language (usage and editing services)**
Please write your text in good English (American or British usage is accepted, but not a mixture of these). Authors who feel their English language manuscript may require editing to eliminate possible grammatical or spelling errors and to conform to correct scientific English may wish to use the English Language Editing service available from Elsevier's Author Services.

**Submission**
Our online submission system guides you stepwise through the process of entering your article details and uploading your files. The system converts your article files to a single PDF file used in the peer-review process. Editable files (e.g., Word, LaTeX) are required to typeset your article for final publication. All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.
Submit your article

Referees
Authors must suggest three non-conflicted peer reviewers with expertise as much for content as for methodology of their submission, with contact details including email address. This will significantly help facilitate timely peer review.

PREPARATION

Queries
For questions about the editorial process (including the status of manuscripts under review) or for technical support on submissions, please visit our Support Center.

Peer review
This journal operates a double anonymized review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor’s decision is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal’s usual procedures, with peer review handled independently of the relevant editor and their research groups. More information on types of peer review.

Double anonymized review
This journal uses double anonymized review, which means the identities of the authors are concealed from the reviewers, and vice versa. More information is available on our website. To facilitate this, please include the following separately:

Title page (with author details): This should include the title, authors' names, affiliations, acknowledgements and any Declaration of Interest statement, and a complete address for the corresponding author including an e-mail address.

Anonymized manuscript (no author details): The main body of the paper (including the references, figures, tables and any acknowledgements) should not include any identifying information, such as the authors' names or affiliations.

Use of word processing software
It is important that the file be saved in the native format of the word processor used. The text should be in single-column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. In particular, do not use the word processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc. When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier). Note that source files of figures, tables and text graphics will be required whether or not you embed your figures in the text. See also the section on Electronic artwork.

To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

Article structure

Word Limits
Papers should not exceed 3000 words for an original research article, review article, Cohort, Case control, Cross Sectional, diagnostic, Quality Improvement, Qualitative studies, experimental research or editorial (excluding references). Correspondence, book and media reviews should not exceed 1000 words.

Subdivision - numbered sections
Divide your article into clearly defined and numbered sections. Subsections should be numbered 1.1 (then 1.1.1, 1.1.2, ...), 1.2, etc. (the abstract is not included in section numbering). Use this numbering also for internal cross-referencing: do not just refer to 'the text'. Any subsection may be given a brief heading. Each heading should appear on its own separate line.
Introduction
State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results.

Material and methods
Provide sufficient details to allow the work to be reproduced by an independent researcher. Methods that are already published should be summarized, and indicated by a reference. If quoting directly from a previously published method, use quotation marks and also cite the source. Any modifications to existing methods should also be described.

Theory/calculation
A Theory section should extend, not repeat, the background to the article already dealt with in the Introduction and lay the foundation for further work. In contrast, a Calculation section represents a practical development from a theoretical basis.

Results
Results should be clear and concise.

Discussion
This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.

Conclusions
The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.

Appendices
If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1) and so on. Similarly for tables and figures: Table A.1; Fig. A.1, etc.

Essential title page information
- **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
- **Author names and affiliations.** Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. You can add your name between parentheses in your own script behind the English transliteration. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.
- **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. This responsibility includes answering any future queries about Methodology and Materials. Ensure that the e-mail address is given and that contact details are kept up to date by the corresponding author.
- **Present/permanent address.** If an author has moved since the work described in the article was done, or was visiting at the time, a 'Present address' (or 'Permanent address') may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.

Covering Letter
Manuscripts must be accompanied by a covering letter stating that the current "Instructions to Authors" have been read by all authors, thereby indicating compliance with those instructions and acceptance of the conditions posed. The letter should state that the authors have seen and agreed to the submitted version of the paper, that all who have been acknowledged as contributors or as providers of personal communications have agreed to their inclusion, that the material is original and that it has been neither published elsewhere not submitted for publication simultaneously. In addition the letter should state that if accepted, the paper will not be published elsewhere in the same form, in English or in any other language, without written consent of the copyright holder. Please also note that Authors should provide a list of 3 potential reviewers (e-mail and affiliation) who are knowledgeable in the subject matter, have no conflict of interest, and are likely to agree to review the manuscript. Please ensure that 2 of the potential reviewers are from a different country to the Authors.
Highlights
Highlights are mandatory for this journal as they help increase the discoverability of your article via search engines. They consist of a short collection of bullet points that capture the novel results of your research as well as new methods that were used during the study (if any). Please have a look at the examples here: example Highlights.

Highlights should be submitted in a separate editable file in the online submission system. Please use 'Highlights' in the file name and include 3 to 5 bullet points (maximum 85 characters, including spaces, per bullet point).

Abstract
A concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s). Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

The abstract should be a maximum of 250 words. For all original research articles, the abstract should be structured with the following headings: Introduction; Methods; Results; Conclusion.

Graphical abstract
Although a graphical abstract is optional, its use is encouraged as it draws more attention to the online article. The graphical abstract should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: Please provide an image with a minimum of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. You can view Example Graphical Abstracts on our information site.

Authors can make use of Elsevier's Illustration Services to ensure the best presentation of their images and in accordance with all technical requirements.

Keywords
Immediately after the abstract, provide a maximum of 6 keywords, using British spelling and avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.

Units and Abbreviations
Systme Internationale (SI) units should be used, with the traditional equivalent in parentheses where appropriate. Conventions for abbreviations should be those detailed in: Baron DN, ed. Units, Symbols, and Abbreviations: A Guide for Biological and Medical Editors and Authors. 5th edition. London: Royal Society of Medicine Services, 1994.Systme Internationale (SI) units should be used, with the traditional equivalent in parentheses where appropriate. Conventions for abbreviations should be those detailed in: Baron DN, ed. Units, Symbols, and Abbreviations: A Guide for Biological and Medical Editors and Authors. 5th edition. London: Royal Society of Medicine Services, 1994.

Acknowledgements
Collate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

Formatting of funding sources
List funding sources in this standard way to facilitate compliance to funder's requirements:

Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].

It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.
If no funding has been provided for the research, it is recommended to include the following sentence:

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Units
Follow internationally accepted rules and conventions: use the international system of units (SI). If other units are mentioned, please give their equivalent in SI.

Math formulae
Please submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., $X/Y$. In principle, variables are to be presented in italics. Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).

Footnotes
Footnotes should be used sparingly. Number them consecutively throughout the article. Many word processors can build footnotes into the text, and this feature may be used. Otherwise, please indicate the position of footnotes in the text and list the footnotes themselves separately at the end of the article. Do not include footnotes in the Reference list.

Artwork
Electronic artwork
General points
• Make sure you use uniform lettering and sizing of your original artwork.
• Embed the used fonts if the application provides that option.
• Aim to use the following fonts in your illustrations: Arial, Courier, Times New Roman, Symbol, or use fonts that look similar.
• Number the illustrations according to their sequence in the text.
• Use a logical naming convention for your artwork files.
• Provide captions to illustrations separately.
• Size the illustrations close to the desired dimensions of the published version.
• Submit each illustration as a separate file.
• Ensure that color images are accessible to all, including those with impaired color vision.

A detailed guide on electronic artwork is available.
You are urged to visit this site; some excerpts from the detailed information are given here.
Formats
If your electronic artwork is created in a Microsoft Office application (Word, PowerPoint, Excel) then please supply 'as is' in the native document format. Regardless of the application used other than Microsoft Office, when your electronic artwork is finalized, please 'Save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below):
EPS (or PDF): Vector drawings, embed all used fonts.
TIFF (or JPEG): Color or grayscale photographs (halftones), keep to a minimum of 300 dpi.
TIFF (or JPEG): Bitmapped (pure black & white pixels) line drawings, keep to a minimum of 1000 dpi.
TIFF (or JPEG): Combinations bitmapped line/half-tone (color or grayscale), keep to a minimum of 500 dpi.
Please do not:
• Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); these typically have a low number of pixels and limited set of colors;
• Supply files that are too low in resolution;
• Submit graphics that are disproportionately large for the content.

Illustration services
Elsevier's Author Services offers Illustration Services to authors preparing to submit a manuscript but concerned about the quality of the images accompanying their article. Elsevier's expert illustrators can produce scientific, technical and medical-style images, as well as a full range of charts, tables and graphs. Image 'polishing' is also available, where our illustrators take your image(s) and improve them to a professional standard. Please visit the website to find out more.
Figure captions
Ensure that each illustration has a caption. Supply captions separately, not attached to the figure. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.

Tables
Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.

References
Citation in text
Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications are not recommended in the reference list, but may be mentioned in the text. If these references are included in the reference list they should follow the standard reference style of the journal and should include a substitution of the publication date with either 'Unpublished results' or 'Personal communication'. Citation of a reference as 'in press' implies that the item has been accepted for publication.

Reference links
Increased discoverability of research and high quality peer review are ensured by online links to the sources cited. In order to allow us to create links to abstracting and indexing services, such as Scopus, CrossRef and PubMed, please ensure that data provided in the references are correct. Please note that incorrect surnames, journal/book titles, publication year and pagination may prevent link creation. When copying references, please be careful as they may already contain errors. Use of the DOI is highly encouraged.

A DOI is guaranteed never to change, so you can use it as a permanent link to any electronic article. An example of a citation using DOI for an article not yet in an issue is: VanDecar J.C., Russo R.M., James D.E., Ambeh W.B., Franke M. (2003). Aseismic continuation of the Lesser Antilles slab beneath northeastern Venezuela. Journal of Geophysical Research, https://doi.org/10.1029/2001JB000884. Please note the format of such citations should be in the same style as all other references in the paper.

Web references
As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (DOI, author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

Data references
This journal encourages you to cite underlying or relevant datasets in your manuscript by citing them in your text and including a data reference in your Reference List. Data references should include the following elements: author name(s), dataset title, data repository, version (where available), year, and global persistent identifier. Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

Reference management software
Most Elsevier journals have their reference template available in many of the most popular reference management software products. These include all products that support Citation Style Language styles, such as Mendeley. Using citation plug-ins from these products, authors only need to select the appropriate journal template when preparing their article, after which citations and bibliographies will be automatically formatted in the journal's style. If no template is yet available for this journal, please follow the format of the sample references and citations as shown in this Guide. If you use reference management software, please ensure that you remove all field codes before submitting the electronic manuscript. More information on how to remove field codes from different reference management software.

Reference style
Text: Indicate references by number(s) in square brackets in line with the text. The actual authors can be referred to, but the reference number(s) must always be given.
List: Number the references (numbers in square brackets) in the list in the order in which they appear in the text.

Examples:
Reference to a journal publication:
Reference to a journal publication with an article number:
Reference to a book:
Reference to a chapter in an edited book:
Reference to a website:
Reference to a dataset:

Note shortened form for last page number. e.g., 51–9, and that for more than 6 authors the first 6 should be listed followed by 'et al.' For further details you are referred to 'Uniform Requirements for Manuscripts submitted to Biomedical Journals' (J Am Med Assoc 1997;277:927–34) (see also Samples of Formatted References).

Journal abbreviations source
Journal names should be abbreviated according to the List of Title Word Abbreviations.

Video
Elsevier accepts video material and animation sequences to support and enhance your scientific research. Authors who have video or animation files that they wish to submit with their article are strongly encouraged to include links to these within the body of the article. This can be done in the same way as a figure or table by referring to the video or animation content and noting in the body text where it should be placed. All submitted files should be properly labeled so that they directly relate to the video file's content. In order to ensure that your video or animation material is directly usable, please provide the file in one of our recommended file formats with a preferred maximum size of 150 MB per file, 1 GB in total. Video and animation files supplied will be published online in the electronic version of your article in Elsevier Web products, including ScienceDirect. Please supply 'stills' with your files: you can choose any frame from the video or animation or make a separate image. These will be used instead of standard icons and will personalize the link to your video data. For more detailed instructions please visit our video instruction pages. Note: since video and animation cannot be embedded in the print version of the journal, please provide text for both the electronic and the print version for the portions of the article that refer to this content.

Supplementary material
Supplementary material such as applications, images and sound clips, can be published with your article to enhance it. Submitted supplementary items are published exactly as they are received (Excel or PowerPoint files will appear as such online). Please submit your material together with the article and supply a concise, descriptive caption for each supplementary file. If you wish to make changes to supplementary material during any stage of the process, please make sure to provide an updated file. Do not annotate any corrections on a previous version. Please switch off the 'Track Changes' option in Microsoft Office files as these will appear in the published version.

Research data
This journal encourages and enables you to share data that supports your research publication where appropriate, and enables you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings. To facilitate reproducibility and data reuse, this journal also encourages you to share your software, code, models, algorithms, protocols, methods and other useful materials related to the project.
Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. If you are sharing data in one of these ways, you are encouraged to cite the data in your manuscript and reference list. Please refer to the "References" section for more information about data citation. For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.

**Data linking**

If you have made your research data available in a data repository, you can link your article directly to the dataset. Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.

There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.

For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.

In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN).

**Mendeley Data**

This journal supports Mendeley Data, enabling you to deposit any research data (including raw and processed data, video, code, software, algorithms, protocols, and methods) associated with your manuscript in a free-to-use, open access repository. During the submission process, after uploading your manuscript, you will have the opportunity to upload your relevant datasets directly to Mendeley Data. The datasets will be listed and directly accessible to readers next to your published article online.

For more information, visit the Mendeley Data for journals page.

**Data statement**

To foster transparency, we encourage you to state the availability of your data in your submission. This may be a requirement of your funding body or institution. If your data is unavailable to access or unsuitable to post, you will have the opportunity to indicate why during the submission process, for example by stating that the research data is confidential. The statement will appear with your published article on ScienceDirect. For more information, visit the Data Statement page.

**AFTER ACCEPTANCE**

**Online proof correction**

To ensure a fast publication process of the article, we kindly ask authors to provide us with their proof corrections within two days. Corresponding authors will receive an e-mail with a link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor. Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors. If preferred, you can still choose to annotate and upload your edits on the PDF version. All instructions for proofing will be given in the e-mail we send to authors, including alternative methods to the online version and PDF.

We will do everything possible to get your article published quickly and accurately. Please use this proof only for checking the typesetting, editing, completeness and correctness of the text, tables and figures. Significant changes to the article as accepted for publication will only be considered at this stage with permission from the Editor. It is important to ensure that all corrections are sent back to us in one communication. Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed. Proofreading is solely your responsibility.
**Offprints**
The corresponding author will be notified and receive a link to the published version of the open access article on ScienceDirect. This link is in the form of an article DOI link which can be shared via email and social networks. For an extra charge, paper offprints can be ordered via the offprint order form which is sent once the article is accepted for publication. Both corresponding and co-authors may order offprints at any time via Elsevier’s Author Services.

**AUTHOR INQUIRIES**
Visit the Elsevier Support Center to find the answers you need. Here you will find everything from Frequently Asked Questions to ways to get in touch. You can also check the status of your submitted article or find out when your accepted article will be published.
